New Books on Super Utility Plus: (available in Febuary)

Super Utility Plus Tech Manual - by Kim watt (New!) 14.95
 Inside Super Utility Plus - by Kim Watt (New!) 19.95

Quick-Fix <Mod I only> - by Kim Watt disk 34.95
 Most all of the features of
 Super Utility, except Special Copy &
 Tape Copy. Works on single density
 Mod I TRSDOS/Newdos 2.1 only. Patch
 for SD LDOS available. Not protected.

Make-80 <Mod I> - by Kim Watt disk 14.95
 Make-80 <Mod III> - by Kim Watt (New!) disk 24.95
 Make-80 is for the TRS-80 user that wants
 to physically convert a 35/40 track disk
 into an 80 track disk. The program boots
 on either a 35, 40, 80 track disk drive.
 This is ideal if you have an 80 track drive
 for Drive 0! You can now buy "canned software!"
 * Note: Does not neccesarly work on
 "protected" media.

BRAND NEW from Kim Watt at a *special* introductory offer!

PowerDraw - by Kim Watt (New!) Mod I or III disk 39.95
=> A full screen graphics editor!! <=
This program was written by Kim for himself as an aid in writing machine language games and screens. It grew and grew until it really turned into a heck of a program! All assembly language. You can create screens of graphics, save to disk, merge them, run in sequence like a movie, merge text with graphics, and write your own games! Saves graphics to disk, so that they can be recalled at a later time! Cursor controlled. Writes to disk or tape in EDAS, EDTASM, BASIC data statements, BASIC program lines, or condensed tokens format! Many more features! Comes complete with PDRAW/CMD as well as three other utilities written by Kim for extending the use of PowerDraw. Also has 3 printer drivers including one that is specifically written for the Epson printer, with or without Graftrax-80(tm)! That means all the graphics you design may be printed out PERFECTLY on your printer!

*** Other Programs from Breeze/QSD ***

SPEAK! - by Bill Neville (New!) Mod III disk only 39.95
SPEAK! is an ingenious new machine language program that allows you to create your own VOICE modules that may be merged with other programs! (Basic or assembly). You may also create "packed strings" that you may insert a BASIC program that contains "talking"! Also contains demos, and a very good talking HANGMAN game. A perfect match for Kim's Quick Draw Utility! Create your own talking games!! Voice modules MUST be created on a Mod III, but can be played back on either system. (Mod I or III)

Special Game Programmers' Utility Package - Mod III disk 69.95
Contains (1) SPEAK! Utility and
(1) Power-Draw Screen Editor Utility
with complete documentation for both.

A proven winner! Hundreds of satisfied owners! -SCRIPTUS-

SCRIPTUS 3.0 Mod I/III disk - 39.95
Will work with ALL DOS's (Mod I or III). Has
MANY new features, such as KILL a file, MERGE
a file, Double Density Directories, PAUSE,
alphabetized directories from SCRIPTUS, with
FREE GRANS displayed and MORE!

SCRIPTUS tape version <Mod I & III on same tape> 24.95
Send "control codes" to your printer
from Scripsit(c) now! Make it do all
the tricks it was designed for! Written
especially for the Epson MX-80, but will
work on most printers that accept control codes.

BASIC/S - a BASIC compiler for Mod I & III disk 48K 39.95
BASICSII/CMD - Now in machine language! Mod I/III 48K disk..... 69.95
Now... a compiled version of the
famous BASIC/S that runs FASTER! Also
many new features and enhancements.
And NO MORE BASIC/S restrictions!!
A fantastic value!!

LZAP/CMD - Mod I & III enhanced versions on same disk 39.95
THE disk editor for LDOS Mod I or III. Includes
versions for 5.0.3, 5.1.1, and 5.1 Mod III.

DiscATER - a fine machine language disk directory program
written for LDOS Mod I/III single or double
density. Available soon for Dosplus 39.95
Special Delivery <Mod I/III> disk 124.95
Extra Special Delivery <Mod I/III> disk 199.95
Special Delivery <Mod II 8" disk> 199.95

Green Screen <TRS Mod I or III. Specify>..... 19.95
Green Screen <TRS Mod II or Leedex 100. Specify> 24.95

The BEST!! See CREATIVE COMPUTING June '81.

Mod I single density boot -- \$79.95
Mod I double density boot -- \$79.95
Mod III version -- \$79.95

New for '82!

MACRO-MONITOR... The Shadow - by Jake Commander (Advanced Opsys)
This is THE BEST Monitor program of its kind ever written for the Mod I/III. Finds any ASCII or HEX character string up to 16 bytes, single steps through ROM, allows up to 8 program breakpoints to be set, permits user specified times between

MACRO-MONITOR... THE SHADOW

THE SHADOW shines the light on the intricate workings of your *TRS-80 Model I or Model III microcomputer. This machine language program by Jake Commander allows you to disassemble and examine program instructions from any part of your computer's memory. THE SHADOW even enables you to single-step through your computer's ROM.

With THE SHADOW, you can load a machine language program from tape or disk and begin execution, at a user-specified breakpoint, one instruction at a time, with a user-defined time delay between instructions. It will disassemble each instruction as it is being executed and route it along with all current register values to your video screen or printer. The user may also search through memory for a specific character string (ASCII or Hex) up to 16 bytes in length.

THE SHADOW allows machine language programs to be easily relocated within memory with all internal calls and jumps automatically changed to execute in the new location. The program also provides a visual display of tape LOADS and SAVES.

THE SHADOW is completely user-relocatable in RAM. This MACRO-MONITOR program works with any compatible DOS.

TRS-80 is a registered trademark of Radio Shack, a division of Tandy Corp.

MACRO-MONITOR... THE SHADOW Program:

- Finds any ASCII or Hex character string up to 16 bytes
- Single-steps through ROM
- Allows up to eight program breakpoints to be set
- Permits user-specified time delays between instructions
- Is user-relocatable in RAM
- Is compatible with any DOS
- Disassembles program instructions from any part of memory, and displays them like this:

```
FD C6 21 E9 FD LD HL,0FDE9H
FD C9 22 16 40 LD (4016H),HL
FD CC AF XOR A

*Lazy Writer is the product of ABC Sales

LAZY WRITER Takes on Scripsit® by Radio Shack® and Electric Pencil®

Has all the things that other word processing programs should have. Easy to use, written all in machine code. / It permits the inserting and deleting by characters, words, sentences, and paragraphs / Page scrolling up and down / Search ahead of the cursor or behind the cursor for any character / The cursor can be moved up, down, left and right / You can seek top of file and bottom of file / Block move of text, block delete of text / Search and replace or search delete / Unlimited insert (to the limit of your machines memory) / Permits use with lower case /

Has things that other programs should have, but don't. Upper and lower case output to your printer (if your printer accepts lower case) without having your computer modified. ON UPPER CASE ONLY MACHINES. This program marks the capital letters so you can see which letters are CAPITALS and which are not. / Will change all upper characters text to lower case or all lower case to upper. A SINGLE COMMAND / Will capitalize the first letter of all sentences and all proper nouns. WITH A SINGLE COMMAND / LOADS ANY ELECTRIC PENCIL FILE / ASCII SAVED FILES. EDITASM FILES or BASIC PROGRAMS SAVED ASCII / Permits installing special control characters in your text for your printers special features, like double wide or condensed print / Definable screen length and definable print length to 255 characters wide / Screen editing that is not final till your command. This means that you can edit your file on the screen and if you don't like how it reads you can cancel and leave it the way it was / You can append files (which means that you can put one file to the end of another file) / No lost characters at the end of the line, even for the fastest typist / A directory of all your files is available to the user without leaving the program / Saving programs to disk easy enough for the non-computer user / To save memory, not all the program modules are in memory at one time but are called from the disk as needed / You can set tab positions like on a typewriter / 10 CUSTOM COMMAND KEYS for the experienced user there is a command file that permits many special functions that are all user defined (not enough space for better explanation in ad, send for complete overview) / Program has HELP file that is a short review of the commands that are available /

Standard Printer Module. This printer module is provided for the user as a standard feature. Optional special printer routines for custom printer will be available in the near future. In this original release, it has the following printer drivers and will support the following printing devices: RS232, TRS232 and PARALLEL printer ports. You have the following format commands: Justifies Text, Centers Text, Centers Title, Line Spacing, Line Length from 3-255 characters and Set Margins / Also send any ASCII code to any printer from the text / Save formatted text to the disk for spooling later / Information for customer to load his own special printer driver / Printing can be stopped and started by the user at any time and then restarted where you left off / You can print entire file or just print to bottom of the page /

Communication Package. RS232 COMMUNICATION TERMINAL PROGRAM permits you to communicate with other computers. Transfer files from one machine to another. Permits dumping memory across the phone lines. Receive files from other TRS-80's and "Shake Hands" with larger computers. This is the complete system called LAZY WRITER. There is no package written for the TRS-80* that is as comprehensive. This package is available for the TRS-80* MOD I, 32K or larger with at least a single disk drive.

NEW FEATURES in Lazy Writer "The People Request, and David Welsh Delivers"

The system permits embedding ASCII commands into the text of the program. NOW you can do SUPERScript and SUBScript (if your printer can handle it). Underlining and boldface, printing of a single word in a paragraph, is now possible, at no extra cost

A key that remembers the cursor position.

User definable special character. For use with printers that have printable characters that the TRS-80 keyboard does not normally support

Margin control from within text. This means that you can change the margins of your printed text without stopping the printer routine and changing it

Page offset with odd/even headers & footers. This means that you can print one page offset to the left of center and the next page offset to the right. This is very nice when you are writing a book

Printing chaining feature. This permits having more than one file on disk and create one printed letter, contract, or book without having to reset the printer commands

Mandatory space command. This is necessary when you are writing letters or papers that have certain words that are not to be broken up, eg John P. Androuser. This name can be made to be unbreakable to justify routines in the program

Disk catalog. Now you can load your disk directory into memory and create a file of this information

Reverse indents or known as Hanging Indents

PowerSoft will accomodate foreign orders with FAST service by sending your order to you AIR MAIL! This service will add \$10 to your total.

DOMESTIC Orders (US/Canada)- PowerSoft accepts Mastercard, Visa, checks, cash, money order, etc.

C.O.D.- COD orders accepted for US shipment only. There is a \$3 handling charge in addition to \$5 shipping.

PURCHASE ORDERS- Purchase orders are accepted **ONLY** from bonified schools, universities, recognized companies, and govt. offices on their official letterhead and/or purchase order, unless other arrangements have previously been made. We have the right to refuse PO's. Our terms are NET 15. We prefer pre-paid orders, or COD.

FOREIGN Orders- Payment **MUST** be by a bank check drawn on a US bank, payable in United States dollars. **NO** personal checks. We also accept VISA and Mastercard. All shipping and duty charges are the customer's responsibility. All **OVERSEAS** orders are subject to a \$10 handling charge, plus shipping if neccessary.

DAMAGES - Claims must be made 5 days after receipt of product. There are **NO** refunds, only exchanges of the same type merchandise, unless previous arrangements have been made. **ANY** unauthorized returns will be refused upon delivery. If you wish to return an item for any reason, **CALL** or **WRITE FIRST!** All returns **MUST** have a return authorization number clearly marked on the outside of the package. Ask for **JOE** or **MARK** for these numbers. Returns are subject to a 10% restocking charge, and **MUST** be in re-saleable condition.

WARRANTY - PowerSoft limits the liability to Manufacturers' warranty, and we are in no way responsible for a products use. Programs are guaranteed to load and run. No other warranty is assumed OR implied. Prices are subject to change without notice.

SUPER UTILITY PLUS

— OVERVIEW —

Copyright ©1981 Breeze Computing, Inc.

SUPER UTILITY PLUS was written by Kim Watt of Breeze Computing, Inc. and is the most powerful program of its kind on the market at this time. This program is a machine language, stand alone program that has its own I/O routines, does not use any ROM or DOS calls, and works on SINGLE or DOUBLE DENSITY systems. SUPER UTILITY PLUS performs such a wide range of varied tasks, that it may truly be called "The King of Utilities". It is not required that the disk be in any drive after initialization of the program and user may custom configure the program to suit his individual system requirements.

ZAP does everything your present "zapping" utility does plus many additional enhancements. It will operate on SINGLE or DOUBLE DENSITY systems and will work with most major operating systems that are presently on the market. It has dual cursors (one for ASCII and one for HEX side of the readout) and allows the user to go to the heart of the disk and read and/or modify data in HEX, ASCII, DECIMAL, BINARY, or OCTAL, regardless of whether it is a standard disk or not. The screen printout on Zap displays one sector at a time in HEX and ASCII (as other "zapping" utilities), but also tells user the true and relative track and whether the disk is IBM format or not. Zap also has a search routine that will locate the highest or lowest configured track on the disk and others that will search the disk for a byte list, ASCII string, word list, or even encrypted code. Zap also allows you to display disk sectors, compare disk sectors, copy sector data, zero disk sectors, copy disk sectors, reverse sector data, sector searches, read ID address marks, or alter data address marks.

PURGE has a full screen editing kill control that allows you to kill files by positioning cursor and pressing one key. Also, Purge has several sub-utilities that allow you to zero out unused directory entries or zero out unused disk granules. In addition, user may kill files by naming the common category of the files (Example: /CMD/BAS/TEXT <V>=visible, <V>=invisible, etc. or even kill files that begin with a specified letter), and also may compute existing passwords, change the disk name, date, passwords, auto command, or even file parameters (name, passwords, protection levels). Lastly, Purge contains a complete disk directory that indicates all active and non-active files on the disk.

FORMAT is a utility that allows the user to format a disk with: standard format, format without erasing existing data, special format (custom format your disk most any way you want it), build a format track and optionally write it back to any track on your disk, and even contains a software built erase utility. The total formatting capabilities of this program are just about UNLIMITED and you may even reformat over a disk or add tracks to an existing disk without destroying existing disk data.

DISK COPY will copy most any standard disk, with or without formatting. The Special Disk Copy enables the user to make a backup of most TRS-80® readable disks that are presently on the market, regardless of any efforts that have been made to protect them from being "backed up". (NOTE: This program WILL NOT copy itself). This program's only intended use is for you to make backups of your legally purchased programs. Please DO NOT use this utility to make "bootleg copies" for others as authors of quality programs deserve their royalties.

TAPE COPY enables the user to perform a wide variety of actions that include the ability to read, write, or verify tapes and even includes a Bit by Bit copying routine that will back up most ANY TRS-80® readable tape regardless of protection entries made by authors. This utility also is for your own use only.

DISK REPAIR allows you to automatically repair the HIT and GAT sectors, and will automatically repair a Boot. This utility also does a complete Directory Check and will advise you of errors that exist. In addition, this utility allows the user to recover killed files (if the file was killed by this utility or by NEWDOS), read protect or un-read protect the directory, move it to a different location on the disk, or clear unused entries. Lastly, this utility advises you of all inactive files that are on the disk.

MEMORY supplies the ability to display, move, test, compare, zero, exchange, input or output a byte to any port, exchange, jump to, reverse, fill, string search, or even load/write and entire track or sectors to/from memory.

FILE contains the abilities to display file sectors, compare files, copy files, disk directory, free space, file locations, drive status, create files, and clear files from disk. These utilities give you a wide range of powerful commands at your disposal to perform just about any function that you want with files up and including the complete reorganization of your entire disk with all the files re-written in their most contiguous order.

CONFIGURE SYSTEM gives you the ability to custom configure Super Utility Plus to your system. You may select single or double density, in any combination, 5" drives, select your operating system boot of your choice, upper or lower case, high speed clock, single or double headed drives, or even configure your printer.

To order Super Utility Plus, *send check or money order for \$74.95, plus \$5 shipping and handling to:
