Using Dialog Boxes

Dialog boxes let you provide Personal DeskMate with information it needs for completing a task you give it. Dialog boxes contain any or all of these components:

edit field

A line on which you supply information by typing it or by changing already displayed responses. Finalize a response you type or edit by pressing **TAB** or by clicking.

list box

A list of responses, one of which you can choose for displaying in an edit field rather than typing a response. Highlight the response, and then press **TAB** or point and click on the edit field to place the response in the field.

radio button groups

Groups of choices with small buttons beside each choice. When you push one button, it becomes the active choice until you push another radio button in the same group. Use the arrow keys to move through radio buttons, pressing the space bar to push a button, or point and click on the button you want to push. Press **TAB** or point to another location to move out of the radio button group.

check box

A "setting" with a small box beside it. If a check or an X appears in the box, the setting is on. If not, the setting is off. Press the space bar or click to turn a check box on or off. Press **TAB** or point to another location to move to another section of the dialog box.

push buttons

Buttons in every dialog box that tell Personal DeskMate you're finished using the dialog box. Position the marker on a push button with **TAB** and press the space bar, or point and click on the button you want to push. The dialog box disappears, and the action you requested takes place. Some push buttons have accelerators—see "Keyboard Techniques" on this card.
