

Important Note to Model III Users

From time to time, Radio Shack may release new versions of TRSDOS, the TRS-80 disk operating system. Check with your local Radio Shack or the *TRS-80 Microcomputer News* for notices and instructions on these enhanced versions of TRSDOS.

If you receive a new version of TRSDOS, read the following before making any modifications to your existing software packages (applications, languages, or system utilities):

- Do not convert your Radio Shack software packages for use with the new version of TRSDOS unless you are instructed to do so.
- Before converting a Radio Shack supplied Model I software package to a Model III format, check to see if Radio Shack provides a Model III version of the package. If so, you should obtain a copy of that version.
- If you're using several different software packages, press the RESET button whenever you change software.

Thank-You!

CONVERTING PROFILE 3.0 TO 3.1

Do not copy the data files from the 3.0 to the 3.1 PROFILE disk, as TRSDOS 1.1's COPY command does not carry the logical record length with it. Instead, follow the procedure below:

1. Backup your 3.0 PROFILE disk.
2. With your 3.0 disk in drive 1 and your 3.1 disk in drive 0, type the following commands:

COPY PROFILE/CMD:0 TO PROFILE/CMD:1
COPY INIT:0 TO INIT:1
COPY ACCESS:0 TO ACCESS:1
COPY SORT:0 TO SORT:1
COPY PRINT:0 TO PRINT:1
KILL LPFORM:1 (This is very important!)
3. The disk in drive 1 is now a 3.1 PROFILE disk. You will have to re-do the print format, but everything else should be correct.
