**To people everywhere who look back and wonder how
they ever got along without a personal computer...**

ABOUT THE EDITOR

David Ahl has a BEE from Cornell University, MBA from Carnegie-Mellon University and has done further work in educational psychology at the University of Pittsburgh.

Two years in the Army Security Agency were followed by four years with Management Science Associates working on computer models and analysis of new consumer products. He continued work in computer analysis (of vocational education graduates) with Educational Systems Research Institute.

He joined Digital Equipment Corporation in early 1970. As Education Product Line Manager he formulated the concept of an educational computer system consisting of hardware, software, and courseware (Edu-System) and helped guide DEC into a leading position in the education market.

Mr. Ahl joined AT&T in 1974 as Education Marketing Manager and was later promoted to Manager of Marketing Communications where he was responsible for the development of sales promotional strategies and materials for the Bell System. Concurrent with this move, he started Creative Computing as a hobby in late 1974.

As Creative Computing grew, Mr. Ahl left AT&T in 1978 to devote full time to it. Creative Computing magazine today is number 1 in software and applications for small computers and a leader in publishing books, cassette and disk software, and related materials.

Mr. Ahl is the author of 6 books and over 70 articles on the use of computers. He is a frequent lecturer and workshop leader at colleges and professional conferences. He is a member of ACM, AEDS, AERA, COSMEP and NCTM.

ACKNOWLEDGEMENTS

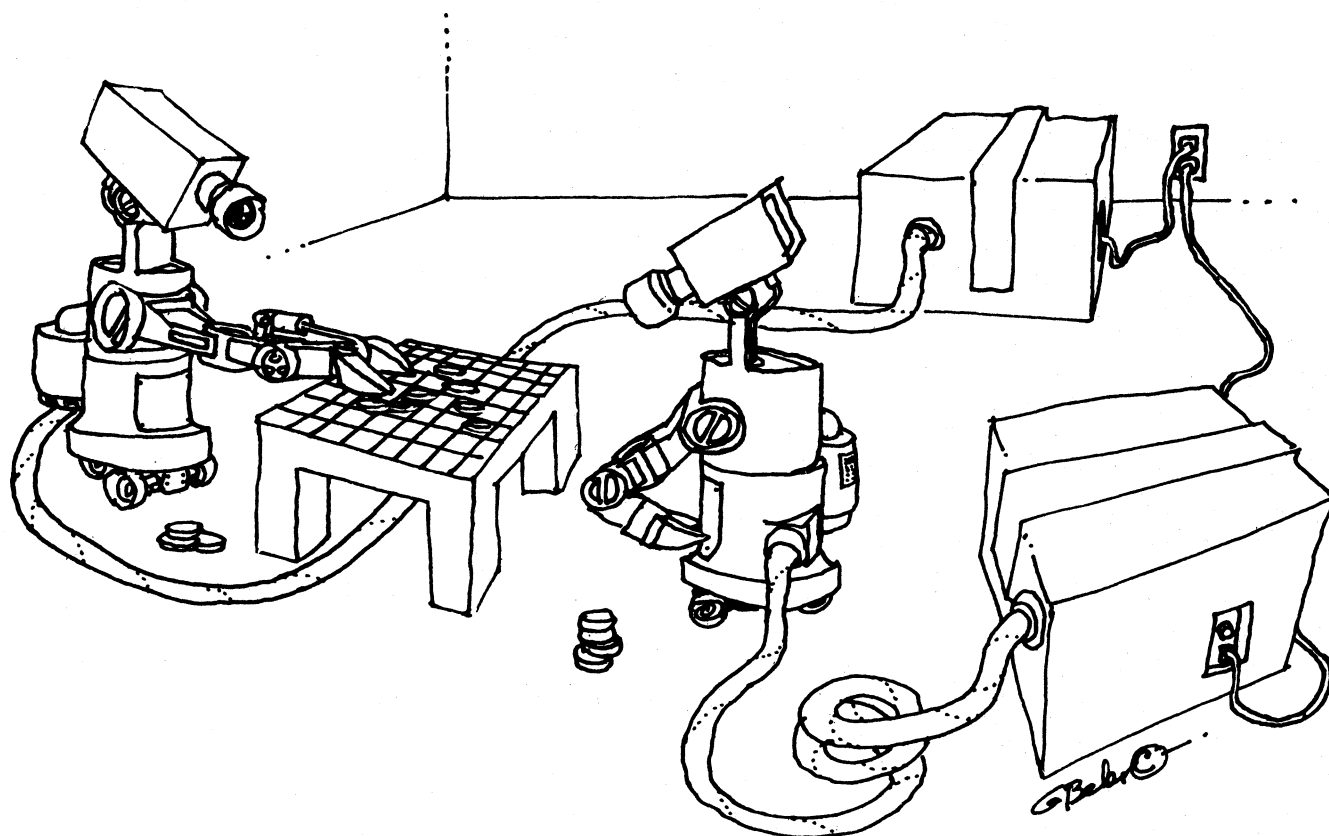

So many people had a hand in bringing this book to fruition, it's difficult to know where to start with acknowledgements. Clearly the 70 some odd game authors deserve a great deal of credit. Taking each game in its own peculiar dialect of Basic and converting it to a "standard" Microsoft Basic was a huge task ably managed by Steve North. Thanks to the team of programmers involved in the conversion effort: Steven Neitz, Bruce Schaeffer, and Jeff Yuan.

RESTRICTIONS

The programs in this book belong to **Creative Computing**. They are not in the public domain. Much as we like to be nice guys, we can not allow these programs to be distributed by non-profit user's groups, or sold in machine-readable format by other parties. You can do whatever you want with the games, but only for your own personal use.

Some games are available on tape cassette and floppy disk for various computers from Creative Computing Software. If they are not available from your dealer, send a large self-addressed stamped envelope for a catalog to Creative Computing Software, P.O. Box 789-M, Morristown, NJ 07960.

Introduction

For most of my adult life I've pursued what some might consider a hopelessly disorganized diversity of projects. I've developed books, records, games and toys — and an occasional script or song — for the Children's Television Workshop (producers of *Sesame Street* and *The Electric Company*), and, on the side, I've written and edited satiric pieces for the *National Lampoon* and other publications. People often ask me if I think it's "sensible" to spread myself over so many media. "My activities really *are* all related," I answer, somewhat defensively. "At least somewhat..."

The truth is that it's the very variety of my work that's kept me interested and challenged. And, not coincidentally, I'm convinced that it's the unlikely mixture of media and people — of humor with curriculum content, of children's games with rock'n'roll music, of animation with phonics lessons; of child psychologists with puppeteers — that has made *Sesame Street* so vital, so exciting, and so successful.

One world that always *did* seem irrelevant to my pursuits, however, was computing. Oh sure, computers might store information, or generate lists of words recognizable to five-year-olds, or index research results, or handle accounts, or, of course, invade my privacy. In short, they might be a useful tool for *someone else* (probably someone pretty different from me). But computers as a *creative* medium — much less a medium I could actually feel comfortable with? Never!

Then, one day a few summers back, my wife, Genevieve — then an engineering student at Columbia — showed me a book called *Basic Computer Games*, by David Ahl. To my amazement, it had funny pictures in it. It was full of *games* — many of them delightfully silly. And — wonder of wonders! — at least some of it (sample runs of the games, for example) was not hopelessly beyond my comprehension.

I was intrigued, and when, months later, I visited the Boston Children's Museum and actually got to play with a computer, I was hooked. The terminals at the museum played many of the games in David Ahl's book. What's more, they actually called me by name, and made humorous comments about my playing skill. After several hours of trying to land a capsule on the moon (only to be told that I'd created several hundred new craters, and that Neil Armstrong "did it right the first time"), I had to be dragged away from the keyboard — it was past closing time, the museum personnel insisted.

From that day on, the development of computer games — to entertain *and* to educate — has been a high priority activity for us at CTW. (As I write this, we're designing a prototype computer game center to open, near Philadelphia, in 1980 — a project in which David Ahl has taken a pioneering role). For the computer combines the possibility of fun, education, challenge, personalization, humor and — most important — *interaction*, in a way that no other medium can. Computers are infinitely patient, not minding (unless they're *programmed* to mind) if you take all day to respond to a question or move a game "piece". If there's something you don't understand, you don't have to be embarrassed to ask a

computer for help. A computer can adjust the difficulty level of a game or activity to suit your ability — some programs even learn how to beat you as you continue to play against them. Armed with the proper software, a computer can play a song (or allow you to play one), paint a picture, write a poem or tell a story. Or it can plunge you into a whole new world, so you can learn by doing (or just escape, for a few moments, into a delightful fantasy).

The games in this, David Ahl's second collection, demonstrate many of these attributes. Try *Camel*, for example, in which you're left alone in the Gobi Desert with one quart of water and a bunch of Wild Berbers hot on your trail. (You'll learn something about resource management even if you don't escape to use your new knowledge.) Or type *Concentration* into the computer, and let your children perfect their matching and memory skills without showing you up. Become a starship captain and practice navigating a three-dimensional universe, in *Maneuvers*. Turn on *Father* so your kids can argue with the computer — instead of you — if they want to stay out late on Saturday night. Or — the ultimate trip — play *Millionaire* and start your whole life over again (complete with such decisions as what job to apply for, what investments to make, and what to do when an airplane crashes into your magnificent new home)!

The main point of all this is that whatever else computers are meant to be, they can be turned into magical multi-media machines that put *you* squarely in the center of the action. And, as Dave Ahl has continually demonstrated, they're an awful lot of fun. Turn the page and see.

Christopher Cerf

The Basic Language

Capsule Description of Microsoft BASIC

Statement or Function	Notes
DATA	String data is not always quoted. Some BASICs require quote marks.
DEF FNF(X)	If your BASIC does not have DEF, simply use the complete function itself wherever FNF(X) appears.
DIM	Dimensions numeric or string array. String scalars aren't dimensioned. Subscripts begin at zero.
END	
FOR...TO...STEP	
GOTO	
GOSUB	
IF...GOTO	
IF...THEN	May be followed by any executable statement.
INPUT	Optional prompt string may be printed before doing INPUT.
LET	LET keyword is optional.
NEXT	
ON...GOTO	Computed GOTO.
ON...GOSUB	Computed GOSUB.
PRINT	
READ	
REM	
RESTORE	
RETURN	
STOP	
ABS(X)	Absolute value.
ASC(X\$)	Returns ASCII value of leftmost character. ASC("A") is 65, ASC("B") is 66, etc.
ATN(X)	Arctangent of value in radians.
CHR\$(X)	Converts ASCII value to character string, opposite of ASC function. CHR\$(65) is "A", CHR\$(66) is "B", etc. CHR\$(7) is a bell ring. CHR\$(8) is a backspace.
COS(X)	Cosine of angle in radians.
EXP(X)	Value of e to the X power.
INT(X)	Greatest integer less than X.
LEFT\$(X\$,Y)	Returns Y leftmost characters of X\$.
LEN(X\$)	Length of X\$.
LOG(X)	Logarithm of X to the base e.

MID\$(X\$,Y,Z)	Returns substring of X\$, starting at position Y, Z characters long.
RND(1)	Random number function. Returns values between 0 and 1.
RIGHT\$(X\$,Y)	Returns Y rightmost characters of X\$.
SGN(X)	Sign function. Returns -1 if X<0, 0 if X=0, 1 if X>0.
SIN(X)	Sine of angle in radians.
SQR(X)	Square root.
STR\$(X)	Converts X to string of decimal digits. For example, STR\$(8.45) is "8.45", exactly as it would be printed.
TAB(X)	Spaces over to position X on the printer.
TAN(X)	Tangent of angle in radians.
VAL(X\$)	Converts a string of digits into a number. Opposite of STR\$.

Conversions to Other BASICs and Debugging Hints

All the programs in this book have been converted and tested in Microsoft BASIC. We have not used any extended or machine-dependent features, so they will work in almost any machine with Microsoft BASIC (TRS-80 Level II, Commodore PET, Apple II with Applesoft BASIC, OSI Challenger, Exidy Sorcerer, or CP/M disk operating system). However, we ran the programs on a Teletype KSR-43 terminal, so several of the games are designed to run with a 72 character terminal width, and two of the games (PATTERNS and PINBALL) use the backspace function to print overstrikes. Both of these programs can be modified, if need be, to bypass the use of this function. However, if your computer has a screen then you may have to adapt the programs to a narrower terminal width (especially on the PET which is only 40 characters wide). Of course, you can also use your screen display for special animated graphics if you're clever.

If It Doesn't Work

Although your first reaction may be to curse your computer and start yelling, "There should be a law against people who sell books full of programs that don't work!" we have found that *almost all* errors are simply typing mistakes, or not knowing about some peculiarity of your particular machine. So if a program doesn't work, we strongly suggest checking your program line-by-line against the one in this book. If you keep getting some kind of very obvious error which is plainly not in our program RUN, please bear in mind that we don't do nasty things like faking program runs, and that the programs really do work. Real bugs tend to be rather subtle.

Creative Computing is concerned with maintaining and improving the quality of its software, so we are interested in hearing about *genuine* errors in the games. We will consider bug reports if the following rules are adhered to:

- 1) The program must be in Microsoft BASIC. We don't want to have anything to do with converted programs.
- 2) The problem must be described in writing and, if available, hard copy of the program LIST and RUN should be included.
- 3) Include an SASE if you want a reply.

These restrictions may seem severe, but please understand that there are tens of thousands of copies of this book wandering around, and we'd have no time for anything else if everyone who hit a snag called us for a half-hour debugging session on the phone, only to find he didn't really know how his RND function worked after all. (It's strange, but there are certain programs in the first volume, *BASIC Computer Games*, which definitely do work, but which people seem to have incredible difficulty with. You can't imagine how many times I've picked up the phone and heard, "I have your BASIC Computer Games book, and I have a problem with this BANNER program on page...")

General Hints

There are four primary areas of difficulty in transporting a program from Microsoft BASIC to some other.

1. *Multiple Statements.* In Microsoft BASIC, multiple statements separated by a colon (:) are allowed. Some BASICs use a backslash. Some don't have multiple statements. Another difficulty arises in the handling of IF...THENs in multiple statement lines. In Microsoft BASIC, when an IF condition is false, control passes to the next line, not the next statement. In other words, if the IF condition is false, the entire remainder of the line is skipped over. Here's an example of converting multiple statements:

Before

```
10 DIM Q(10): INPUT K: LET Z=1
20 FOR I=1 TO K: PRINT: NEXT I
30 IF K=3 THEN PRINT "This or That": GOSUB 900:
  GOTO 500
40 REM More Stuff...
```

After

```
10 DIM Q(10)
12 INPUT K
14 LET Z=1
20 FOR I=1 TO K
22 PRINT
24 NEXT I
30 IF K<>3 THEN 40
32 PRINT "This or That"
34 GOSUB 900
36 GOTO 500
40 REM More Stuff...
```

2. *FOR Loops.* In Microsoft BASIC, a FOR loop is always executed at least once. The test to decide if the loop is to be terminated is done when the corresponding NEXT statement is encountered. In general this is undesirable and you may notice that in some programs a patch was made to compensate for this quirk. The real problem of compatibility between BASICs is in how BASIC knows which loops to keep track of, and which ones to forget. In

Microsoft BASIC, a FOR loop is considered to be done when it finishes normally (falls out of the NEXT statement), if it is restarted, or if it nested within a loop that is restarted. Some BASICs frown sternly on the practice of jumping out of a loop, which can be real trouble. (This happens in North Star BASIC, Polymorphic BASIC, and Processor Tech Extended BASIC.) If this difficulty occurs, then convert the FOR loops back to IF...THEN structures. For instance:

10 INPUT I,J	10 INPUT I,J
20 K=I	20 K=I
30 PRINT "Some stuff"	30 PRINT "Some stuff"
40 K=K+1	40 K=K+1
45 IF K <= J THEN 30	45 IF K <= J THEN 30
50 END	50 END

The NEXT verb by itself (without an argument), always refers to the most recent FOR statement. Generally we've avoided this feature.

3. *Arrays.* Some programs use zero as an array subscript. Your BASIC may not like this. If your arrays start at one, and the program tries to use zero, then just add one to all the array subscripts. (Within the context of a particular program, there are often niftier ways of getting around this problem, but unless you can tell what's going on inside the program, this is the most painless way.)

4. *Character Strings.* There are two different methods of taking a substring from a longer string. In Hewlett-Packard style BASIC, substrings are in the form X\$(I,J) which takes characters from position I through J out of X\$, and X\$(I) which takes everything from position I and to the right. Microsoft BASIC, styled after DEC, uses LEFT\$, RIGHT\$, and MID\$. Here's how to convert.

LEFT\$(X\$,I)	X\$(1,I)
RIGHT\$(X\$,I)	X\$(LEN(X\$)-I+1)
MID\$(A\$,I,J)	X\$(I,I+J-1)

Another potential problem exists with strings. Some of the programs use string arrays, but some BASICs just don't have string arrays. If you see a character string in a DIM statement, then it's a string array, not a scalar. If your BASIC doesn't have string arrays, then you're probably out of luck, unless the array is rather small and you can pack the whole string array into a scalar. For instance, let's say we have array A\$(0-3).

```
A$(0)="HORSE"
A$(1)="DOG"
A$(2)="FISH"
A$(3)="CAT"
```

If we decide in advance that no word will have more than five characters, then we can stuff this whole thing into one string, A\$.

```
A$="HORSEDOG FISH CAT "
```

Notice that each word takes up five positions, even if the extra ones must be made up with blanks. Thus our old A\$(0) is now in positions 1-5, A\$(1) in positions 6-10, etc. We can generalize that A\$(n) is translated into positions 5*n+1 through 5*n+5. Obviously, the ability to use this method to substitute for string arrays depends on how big you can make the one big string scalar to take its place.

The Games

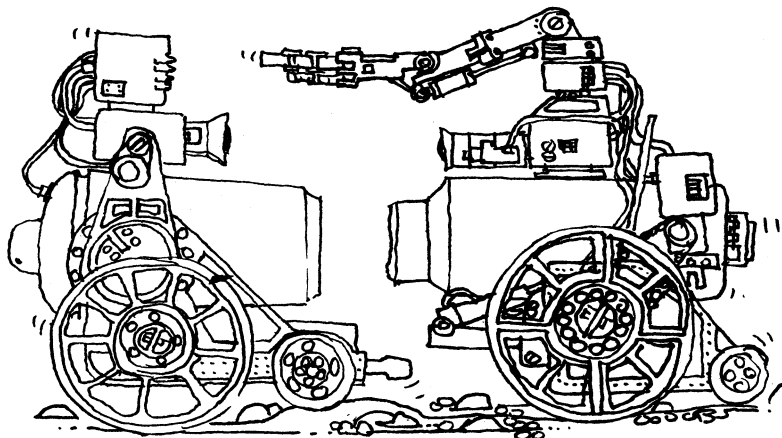

Artillery 3

In this game, two or three humans may play. Each one of them has an artillery piece and is firing at an opponent. The first person to destroy his opponent wins that round of the game. The parameters for distances and muzzle velocities of the artillery pieces are set at the beginning of the game. The shots are fired by giving a firing angle expressed in degrees from the horizontal.

In a three player game, you may elect which player you are firing at; hence player one and three could both be firing at player two. Once one of the players is eliminated, it becomes a two player game and the remaining two players fire at each other.

Personally, I would prefer to think of this game as lobbing mudpies or snowballs or custard cream pies or something non-destructive. However, it was originally written as shoot-'em-up game so that's how it appears here.

This game was originally written by Mike Forman and further revised by N.E. Lyon and Brian West. It first appeared in *Creative Computing*, Jan/Feb 1976.

ROUND 1

PLAYER 1 SHOOTING AT? 3
FIRING ANGLE? 68
YOU UNDERSHOT BY 545.777 FEET.

PLAYER 2 SHOOTING AT? 3
FIRING ANGLE? 79
YOU UNDERSHOT BY 566.253 FEET.

PLAYER 3 SHOOTING AT? 1
FIRING ANGLE? 80.5
YOU UNDERSHOT BY 872.861 FEET.

ROUND 2

PLAYER 1 SHOOTING AT? 2
FIRING ANGLE? 70
YOU OVERSHOT BY 808.207 FEET.

PLAYER 2 SHOOTING AT? 3
FIRING ANGLE? 84
YOU UNDERSHOT BY 1204.37 FEET.

PLAYER 3 SHOOTING AT? 1
FIRING ANGLE? 73
YOU OVERSHOT BY 294.324 FEET.

ROUND 3

PLAYER 1 SHOOTING AT? 2
FIRING ANGLE? 60
YOU OVERSHOT BY 1435.18 FEET.

PLAYER 2 SHOOTING AT? 3
FIRING ANGLE? 70
YOU OVERSHOT BY 460.307 FEET.

PLAYER 3 SHOOTING AT? 1
FIRING ANGLE? 74
YOU UNDERSHOT BY 153.305 FEET.

ROUND 4

PLAYER 1 SHOOTING AT? 2
FIRING ANGLE? 74
YOU OVERSHOT BY 490.028 FEET.

PLAYER 2 SHOOTING AT? 3
FIRING ANGLE? 73
YOU OVERSHOT BY 140.66 FEET.

PLAYER 3 SHOOTING AT? 1
FIRING ANGLE? 72
YOU OVERSHOT BY 438.912 FEET.

RUN

ARTILLERY 3
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

WELCOME TO 'WAR3'. TWO OR THREE HUMANS MAY PLAY!
DO YOU WISH SOME ASSISTANCE? YES

THIS IS A WAR GAME. TWO OR THREE PLAYERS ARE GIVEN
(THEORETICAL) CANNONS WITH WHICH THEY ATTEMPT TO SHOOT EACH
OTHER. THE PARAMETERS FOR DISTANCES AND MUZZLE VELOCITIES ARE
SET AT THE BEGINNING OF THE GAME. THE SHOTS ARE FIRED BY
GIVING A FIRING ANGLE, EXPRESSED IN DEGREES FROM HORIZONTAL

THE COMPUTER WILL KEEP TRACK OF THE GAME AND REPORT ALL
MOVES. A 'HIT' IS SCORED BY FIRING A SHOT WITHIN 5% OF THE
TOTAL DISTANCE FIRED OVER. GOOD LUCK

NO. OF PLAYERS? 3

DISTANCE (FT.) 1 TO 2 ? 1000
DISTANCE (FT.) 2 TO 3 ? 2000
DISTANCE (FT.) 3 TO 1 ? 2500

MUZZLE VELOCITY (FT./SEC.) OF 1 ? 300
MUZZLE VELOCITY (FT./SEC.) OF 2 ? 350
MUZZLE VELOCITY (FT./SEC.) OF 3 ? 400

ROUND 5
 PLAYER 1 SHOOTING AT? 2
 FIRING ANGLE? 76.5
 YOU OVERSHOT BY 276.044 FEET.

PLAYER 2 SHOOTING AT? 3
 FIRING ANGLE? 75
 A HIT - 3 IS DEFUNCT.

ROUND 6
 PLAYER 1 SHOOTING AT? 2
 FIRING ANGLE? 78
 YOU OVERSHOT BY 143.826 FEET.

PLAYER 2 SHOOTING AT? 1
 FIRING ANGLE? 78
 YOU OVERSHOT BY 557.79 FEET.

ROUND 7
 PLAYER 1 SHOOTING AT? 2
 FIRING ANGLE? 79.4
 A HIT - 2 IS DEFUNCT.

GAME OVER. 1 WINS.
 OK

Baccarat

Games of the baccarat and chemin de fer family originated in the baccarat that became popular in the French casinos in the 1830's. In the present century they have travelled from Europe to the United States, back to Europe, and to casinos throughout the world. This process has resulted in wide variations in playing rules and what is called "baccarat" in one casino may more nearly resemble the "chemin de fer" of another.

The computer game here is more nearly chemin de fer than it is baccarat. The rules, briefly, are as follows: Eight packs of cards are shuffled together and placed in a "shoe" from which the cards can be slid out one by one. Following this, the players make their bets. Any player may make any bet up to the amount of the bank. The player at the banker's right has the first choice to bet. Any part of the bank he does not take may be bet by the next player on his right, and so on in order until the entire bank is covered or until everyone has bet who wishes to. Any player may take the entire bank by saying, "Banco," but when two or more players wish to banco, the one nearest the banker's right has the privilege.

After the bets are placed, the banker deals two hands of two cards each, dealing one card at a time. The hand he deals first represents all the players betting against him; the other hand is the banker's. The player who has made the largest bet against the banker plays the opposition hand.

The object of the game is to hold two or three cards which count nine (9), or as nearly nine as possible. The values of the cards are: face cards and tens, zero; aces, one each; any other card, its number. Units of ten points are disregarded, so that nine plus seven count as six, not sixteen.

A player whose card is nine or eight in his first two cards shows his hand immediately. He has a natural and his hand wins (but a natural nine beats a natural eight). Naturals of the same number tie, and there is a new deal.

When the result is not decided by a natural, the banker must give a card to his opponent on request; or the opponent may stand. The opponent must stand on six or seven, must draw to a zero, one, two, three, or four, but has the option on five. The additional card, if given, is face up.

Then the banker decides whether to stand or take a card.

IF BANKER GIVES	BANKER STANDS ON	BANKER DRAWS TO
Face card or ten	4, 5, 6, 7	3, 2, 1, 0
Nine	4, 5, 6, 7 (or 3)	2, 1, 0 (or 3)
Eight	3, 4, 5, 6, 7	2, 1, 0
Seven or six	7	6, 5, 4, 3, 2, 1, 0
Five or four	6, 7	5, 4, 3, 2, 1, 0
Three or two	5, 6, 7	4, 3, 2, 1, 0
Ace	4, 5, 6, 7	3, 2, 1, 0
Opponent stands	6, 7	5, 4, 3, 2, 1, 0

Neither player may have more than one additional card, giving him three cards at the most. When each player has exercised his option, the cards are shown. If the totals are the same, the bets are off and may be withdrawn and new bets are placed exactly as before for another deal. If the opponent has a

higher number than the banker's, each player collects such portion of the bank as he has covered.

In the game of chemin de fer, the role of banker rotates among the players after each hand; in baccarat, it does not.

Bible Quiz

BIBLE QUIZ is a program which administers up to 25 questions about the Bible to the user. If the answer given to a question is correct, the program proceeds to the next question. If an incorrect answer is given, the program gives the correct answer. In either case, the biblical reference is given.

Note that Statements 124 to 296 could serve as the basis for any type of CAI dialogue with instructions preceeding Statement 124 and the questions and answers in the data statements.

This program was written by Steve Wentworth of Muskingum College. It originally appeared in *Creative Computing*, Mar/Apr 1977.

CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS GAME IS A QUIZ WHICH TESTS
YOUR KNOWLEDGE OF BIBLICAL EVENTS, PLACES,
AND PERSONS.

I WILL ASK YOU A QUESTION AND THEN WAIT
FOR YOUR ANSWER. IF YOUR ANSWER IS CORRECT
I WILL PROCEED TO THE NEXT QUESTION. IF YOUR
ANSWER IS INCORRECT I WILL GIVE YOU THE
CORRECT ANSWER AND THEN PROCEED TO THE
NEXT QUESTION.

ALL ANSWERS ARE ONE WORD.
ALL ANSWERS MUST BE CORRECTLY SPOelled.
THERE IS A TOTAL OF 25 QUESTIONS.
HOW MANY QUESTIONS DO YOU WISH TO TRY? 7

QUESTION # 1

WHAT SONG-COMPOSER IS CREDITED WITH 1005 SONGS? SOLOMON
CORRECT ANSWER--VERY GOOD! 1 KINGS 4:32

QUESTION # 2

WHAT BLIND MAN KILLED THREE THOUSAND AT A RELIGIOUS FEAST? SAMSON
CORRECT ANSWER--VERY GOOD! JUDGES 16:23-30

QUESTION # 3

WHO KILLED HIS BROTHER FOR HUMBLING HIS SISTER? ABSALOM
CORRECT ANSWER--VERY GOOD! 2 SAM. 13

QUESTION # 4

WHAT BOY HAD A VARIEGATED COAT? JOSEPH
CORRECT ANSWER--VERY GOOD! GEN. 37:3

QUESTION # 5

WHO CLIMBED A TREE TO SEE JESUS? ZACCHAEUS
CORRECT ANSWER--VERY GOOD! LUKE 19:4

QUESTION # 6

WHO SET FIRE TO THREE HUNDRED FOXES TAILS? SAMSON
CORRECT ANSWER--VERY GOOD! 1 JUDGES 15:4,5

QUESTION # 7

WHAT CITY IS CALLED THE CITY OF PALM TREES? BABEL
INCORRECT ANSWER
THE CORRECT ANSWER IS JERICHO. DUET. 34:3

OUT OF 7 QUESTIONS YOU ANSWERED 6 CORRECTLY.
YOUR PERCENTAGE FOR CORRECT ANSWERS IS 86 %

Big 6

Big 6 is strictly an American invention from the casinos of Nevada. There is a very large wheel mounted vertically, generally four feet or more in diameter, that has the numbers one through six in a random arrangement around its periphery. Players place their bets on a roulette type of table in front of the wheel. The wheel is then spun and three numbers are declared the winners. These are the three numbers that appear at the top of the wheel. Most novice players looking at the wheel think that since there are three winners they have a very good chance of winning a large sum of money. Betting limits are generally up to \$500 and, as many players discover very quickly, the odds are very heavily in favor of the house.

If you feel that you must play Big 6, try it by computer first and then figure out how much you can afford to lose when you go to play it in Las Vegas or Atlantic City. The computer is a much better sport when you lose than the casino managers will be at either of those resort cities.

Big 6 was written by Steve Heywood and Dave Alvey.

Binary

This game tests your skills in binary-to-decimal and decimal-to-binary conversion. You are given twenty conversion trials. Numbers are chosen randomly and your score is printed at the end. The answer to any conversion you miss is displayed; if the next conversion is presented, you may assume you got the previous one correct.

There are several possible modifications for this program such as timing the response, allowing the user to specify the number range, checking for duplicate numbers, or extending it to other bases.

This program was written by Ted Park of Pacific Union College. It originally appeared in *Creative Computing*, Mar/Apr 1975.

Blackbox

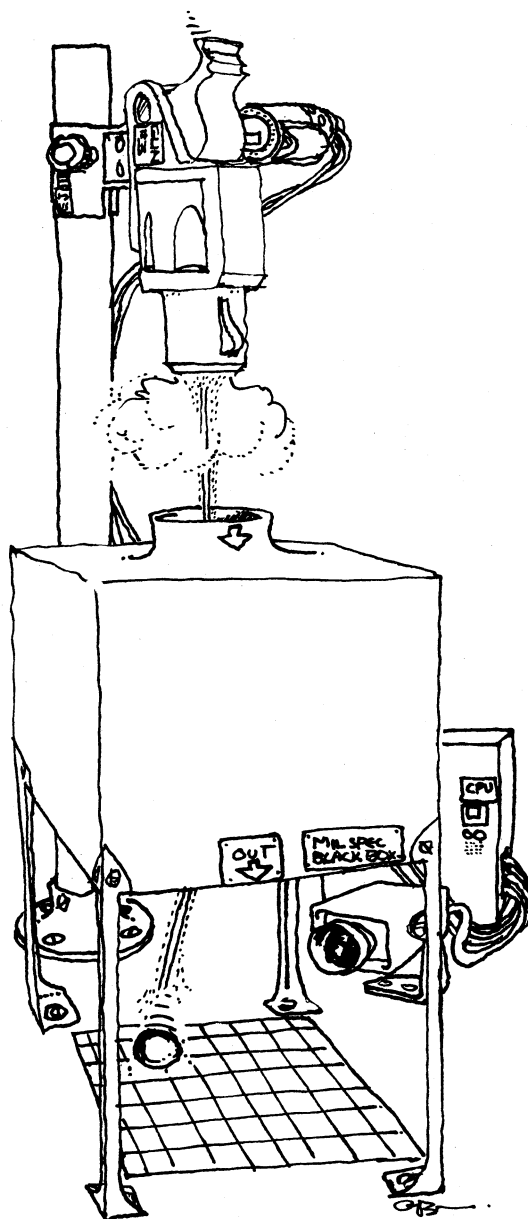

Description: Black Box is a computerized version of the game that appeared in the August 1977 issue of *Games and Puzzles*. The Black Box is an 8-by-8 square in which several atoms are hidden. The object of the game is to discover the positions of the atoms by projecting rays at them from the sides of the box and noticing how these rays are deflected, reflected, or absorbed. Rays enter the box across one of the four edges and travel horizontally or vertically. The entry points are numbered from 1 to 32, counterclockwise, starting at the top of the left edge.

To play the game, you first specify how many atoms to place in the Black Box. Then you type in the point at which you send the ray into the box, and you are told whether the ray was absorbed or where it emerged. Type a zero to end the game and print the board. The path of the ray is governed by the following rules:

- (1) Rays that strike an atom directly are absorbed.
- (2) Rays that come within one square of an atom in a diagonal direction (so that they would pass next to the atom if they continued) are deflected by 90 degrees.
- (3) Rays aimed between two atoms one square apart are reflected.
- (4) Rays that enter on either side of an atom on the edge of the box are reflected.
- (5) Rays otherwise travel in straight lines.

The game is pretty interesting with four or five atoms, but can get out of hand with too many more. Occasionally, an atom can be masked by others. This doesn't occur often, but sometimes the position is truly ambiguous (more often, there is only one place the atom can be). For competitive play, score one point for reflections and absorptions, two for rays which emerge from the box, and five points for each atom guessed incorrectly.

This program and description were written by Jeff Kenton. A previous version appeared in *Creative Computing*, May/June 1978.

Bobstones

The idea for this number game was derived from a contest called "Bobstones" described in the novel *Watership Down*. The object of Bobstones is to guess three things about the roll of a pair of dice.

1. If the sum of the dice is odd or even..... 1 point
2. The sum of the dice 2 points
3. The number on each of the two dice 3 points

The winner is the first player to score eleven points. If a tie results, the winner is the first player to break the tie.

In this computer version of the game, you are playing against the computer. However, the computer makes its guess before the dice are "rolled." Hence, it has no real advantage over its human opponent.

This game was written by Dohn Addleman. It originally appeared in *Creative Computing* Mar/Apr 1976.

Bocce

This program simulates the Italian game of Bocce also called "lawn bowls" or just "bowls."

The instructions starting at the line 1770 explain the game.

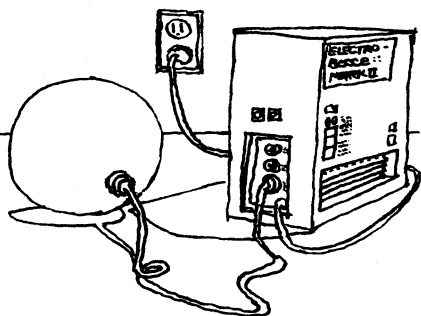

This is the four-ball version (Q=5). Allowing more balls in the game (raising Q) will increase central processing time since the chances of collision will rise and the resulting position of each ball has to be recomputed. However, the delay is short and we routinely play six to eight balls. Increasing Q beyond 9 will require redimensioning the arrays at line 1030.

When there is collision, the bell will sound (line 1500).

It is important to remember that the object is to get close to the jack and not to hit it. Upon collision, the jack will move off more quickly than a ball because it is smaller and lighter. A careless shot can turn a good game into a disaster.

It requires some imagination to play the game well. It goes best if you imagine that you are standing at coordinates 0,0 and are looking out along the X-axis.

This game and the description above were written by Victor Bendall of Eastern Kentucky University. It originally appeared in *Creative Computing*, Jul/Aug 1977.

RUN

BOCCE
CREATIVE COMPUTING
MORRISTOWN NEW JERSEY

THIS GAME SIMULATES THE GAME OF LAWN BOWLS
DO YOU NEED INSTRUCTIONS? ENTER YES OR NO? YES

IN THIS GAME YOU ROLL 4 BALLS SUCCESSIVELY AT A TARGET BALL (CALLED A JACK). THE OBJECT IS TO GET THE BALLS AS CLOSE TO THE JACK AS POSSIBLE. THE BALLS ARE 10 CM IN DIAMETER AND ARE WEIGHTED SO THAT THEY ROLL IN A CURVE. YOU WILL HAVE TO ROLL THEM AT AN ANGLE TO THE LINE FROM YOU AT COORDINATES 0,0 TO THE JACK AT COORDINATES X,Y. A POSITIVE ANGLE WILL MAKE THE BALL CURVE CLOCKWISE. A NEGATIVE ANGLE WILL MAKE IT CURVE ANTI-CLOCKWISE. THE JACK IS A 4 CM WIDE AND WILL ROLL STRAIGHT IF YOU HIT IT. BALLS HIT BY YOUR THROWN BALL MAY CURVE IN EITHER DIRECTION.

HINT. TRY AN INITIAL VELOCITY OF 500 AND AN ANGLE OF 10

THE JACK IS LOCATED AT 2171 77
BALL 1
VELOCITY? 500
ANGLE? 10

JACK AT COORDINATES 2171 77
BALL 1 AT COORDINATES 2434.63 -494.239 IT IS 622.137 FROM THE JACK

YECH! OVER 20 FEET AWAY!
LONG AND TO THE RIGHT

BALL 2
VELOCITY? 480
ANGLE? 9

JACK AT COORDINATES 2171 77
BALL 1 AT COORDINATES 2434.63 -494.239 IT IS 622.137 FROM THE JACK
BALL 2 AT COORDINATES 2243.71 -455.535 IT IS 530.476 FROM THE JACK

YECH! OVER 17 FEET AWAY!
LONG AND TO THE RIGHT

BALL 3
VELOCITY? 600
ANGLE? 3

JACK AT COORDINATES 2171 77
BALL 1 AT COORDINATES 2434.63 -494.239 IT IS 622.137 FROM THE JACK
BALL 2 AT COORDINATES 2243.71 -455.535 IT IS 530.476 FROM THE JACK
BALL 3 AT COORDINATES 3506.13 -710.248 IT IS 1542.95 FROM THE JACK

YECH! OVER 50 FEET AWAY!
LONG AND TO THE RIGHT

BALL 4
VELOCITY? 300
ANGLE? 5

JACK AT COORDINATES 2171 77
BALL 1 AT COORDINATES 2434.63 -494.239 IT IS 622.137 FROM THE JACK
BALL 2 AT COORDINATES 2243.71 -455.535 IT IS 530.476 FROM THE JACK
BALL 3 AT COORDINATES 3506.13 -710.248 IT IS 1542.95 FROM THE JACK
BALL 4 AT COORDINATES 876.228 -178.163 IT IS 1312.67 FROM THE JACK

YECH! OVER 43 FEET AWAY!
SHORT AND TO THE RIGHT

THE TOTAL DISTANCE OF ALL BALLS FROM THE JACK IS 4008.23 CM
DON'T PLAY THIS GAME FOR MONEY!!

CARE TO TRY AGAIN? ENTER YES OR NO? NO

OK

Boga II

A Boga is a bogus animal or mythical beast in the Hurkle family. Like a Hurkle, the Boga hides on a grid with dimensions up to 20 by 20. It sends out clues that tell you which direction to move from where you are to where it is. However, one major difference between a Boga and a Hurkle is the Boga is also seeking you out at the same time you are looking for it. You don't have to tell it which directions to go after each of its guesses to get closer to you. It apparently has a very good nose and can tell on its own. However, it plays fairly and gives you the first guess, and then it takes its guess. Guesses continue alternately until one or the other, human or boga, find the opposing player. At the beginning of the game, you may print out the grid if you wish to make your guessing job slightly easier. Remember, directions in this game correspond to the diagram; that is, north is up and east is to the right.

This game was created by David Strickler.

Bombrun

Bombrun is an extremely accurate simulation of an aircraft dropping a bomb on a very small target. You may specify whether the aircraft is climbing, diving, and the angle in degrees. You may specify speed in feet per second; you may also specify at what point you wish to drop the bomb. The program gives you four passes over the target.

A perfect hit is possible but extremely difficult to achieve. A hit within 300 feet of the target is considered "threatening" while hits outside of that range may be considered a negative commentary on your knowledge of physics.

This program was originally written by Jim Prelesnik.

RUN

BOMBRUN
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS PROGRAM SIMULATES A BOMBING RUN. DO YOU NEED INSTRUCTIONS? YES
YOU HAVE THE OPTION OF MAKING FOUR PASSES OVER THE TARGET, WITH THE ABILITY TO DROP A BOMB ONCE DURING EACH OF THESE PASSES. ALTITUDE CHANGES MAYBE MADE THROUGH THE 'CLIMB/DIVE' COMMAND BY PRINTING 'CLIMB' OR 'DIVE', FOLLOWED BY A COMMA AND THE DESIRED ANGLE (IN DEGREES). NEW VELOCITIES (RANGING FROM 300 TO 900 FEET PER SECOND) MAY BE INPUT AFTER THE 'AIRSPEED' QUESTION MARK. 'CLIMB/DIVE' ANGLES, VARYING FROM 0 TO 15 DEGREES, WILL ADD AS SPECIFIED BY 'CLIMB' OR 'DIVE' COMMANDS TO YIELD A NET INCLINATION/DECLINATION ANGLE BETWEEN 0 TO 60 DEGREES, CLIMBING OR DIVING. A MINIMUM ALTITUDE OF 100 FEET MUST ALSO BE MAINTAINED. WILLFULLY EXCEEDING ANY OF THE MAX./MIN. SPECS WILL RESULT IN THE CRASH OF YOUR BOMBER. ALSO, A BOMB COMMAND OF 'DROP' DURING A DIVE WILL GIVE YOUR BOMB AN INITIAL DOWNWARD VELOCITY, SHORTENING THE DROP TIME, AS A 'CLIMB' COMMAND WILL LENGTHEN THIS TIME. THE BOMB WILL BE LAUNCHED IMMEDIATELY FOLLOWING THE MOST RECENT 'STATS' READ-OUT UPON 'DROP' COMMAND, AND WILL BE HELD FOR FURTHER POSITIONING INFORMATION UPON THE COMMAND 'STAND BY'. THE TARGET IS 1 FOOT IN DIAMETER. GOOD LUCK

BOMB COMMAND? DROP
BOMB DROPPED.
TIME TO EXPLOSION... 2.8257 SECONDS

THE BOMB LANDED 352.28 FEET IN FRONT OF THE TARGET'S CENTER.

DURING YOUR 4-PASS BOMBRUN, YOU MANAGED TO STRIKE
WITHIN 0 FEET OF THE TARGET.

WOULD YOU LIKE TO RELOAD AND PLAY AGAIN?

? NO

LOOK OVER THE PHYSICS LAWS GOVERNING FALLING BODIES,
AND RETURN TO PLAY AGAIN SOON.

OK

Bridge-It

Bridge-it is a two-player pencil and paper logic game. One player is represented by X's, the other by O's. The X's and O's are arranged in an alternating grid pattern so that X's may be joined to one another by a line without crossing an O and O's may be joined to one another without crossing an X. The object of the game is for the X's to draw a line from the top to the bottom of the board. The O's must connect a continuous chain from the right to the left of the board. Players move alternately and may go any place on the grid. Any two of your symbols,

either X's or O's, may be connected together on a given move.

In this particular version of the game, the computer is your opponent. The computer plays the X's and you play the O's. The computer moves first, which gives it a very slight advantage. If you find it is too formidable an opponent you may wish to modify the program to allow the player to move first. At any point during the game you may ask for a printout of the board and see how the play is progressing.

This program was written by Michael Kass, Miles Barel, and Alan Segal.

RUN

BRIDGE-IT
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES

THE OBJECT OF THIS GAME IS FOR YOU TO GO FROM THE LEFT COLUMN TO THE RIGHT COLUMN BY CONNECTING THE O'S. THE COMPUTER MUST GO FROM THE TOP TO THE BOTTOM BY CONNECTING THE X'S.

YOU MAKE YOUR MOVES BY TYPING IN THE COORDINATES (X,Y) OR (COLUMN,ROW) OF THE 'O' YOU WISH TO MOVE FROM AFTER THE COMPUTER TYPES:

YOUR MOVE FROM?

AND BY TYPING IN THE COORDINATES OF THE 'O' YOU WISH TO MOVE TO AFTER THE COMPUTER TYPES:

TO?

YOU CAN MOVE EITHER VERTICALLY OR HORIZONTALLY, BUT NOT DIAGONALLY. YOU CANNOT MOVE VERTICALLY IN EITHER THE FIRST COLUMN OR THE THIRTEENTH COLUMN. THE COMPUTER WILL MOVE FIRST.

TEAR ON LINE

YOU MAY USE THIS BOARD TO MARK THE MOVES ON, OR YOU CAN GET AN UPDATED BOARD AFTER YOU MAKE EACH MOVE.

Camel

In this game of high adventure, your object is to travel 200 miles across the great Gobi Desert. You're being chased by a tribe of knock-kneed pygmies. You have one quart of water which will last you for six drinks; it may be renewed if you find an oasis or, if you are found by another traveller, you may get an additional half-quart of water. During your journey you encounter all types of hazards such as sand storms, wild Berbers and possible injuries to your camel.

Warning: this is a very hazardous and addictive game. It is also very difficult to win. In ten plays of the game, the maximum distance we were able to travel was 159 miles, and in many cases we managed to make only seven or eight miles before one of the hazards caused our demise.

This game was submitted by the Heath Users Group.

RUN

CAMEL
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

WOULD YOU LIKE INSTRUCTIONS? YES

WELCOME TO CAMEL. THE OBJECT IS TO TRAVEL
200 MILES ACROSS THE GREAT GOBI DESERT.
A TRIBE OF KNOCKED KNEED PYGMIES WILL BE CHASING YOU.
YOU WILL BE ASKED FOR COMMANDS EVERY SO OFTEN.

COMMAN DS :

- #1 DRINK FROM YOUR CANTEEN
- #2 AHEAD MODERATE SPEED
- #3 AHEAD FULL SPEED
- #4 STOP FOR THE NIGHT
- #5 STATUS CHECK
- #6 HOPE FOR HELP

YOU HAVE ONE QUART OF WATER WHICH WILL LAST YOU SIX DRINKS.
YOU HAVE RENEW YOUR WATER SUPPLY COMPLETELY AT AN OASIS.
YOU GET A HALF A QUART IF FOUND BY HELP.
IF HELP DOES NOT FIND YOU AFTER COMMAND SIX, YOU LOSE.
GOOD LUCK AND GOOD CAMELING !!
YOU ARE IN THE MIDDLE OF THE DESERT AT AN OASIS.
YOU HAVE TRAVELLED 0 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 3
YOUR CAMEL IS BURNING ACROSS THE DESERT SANDS.

YOU HAVE TRAVELLED 6 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 3
YOUR CAMEL IS BURNING ACROSS THE DESERT SANDS.

-----W A R N I N G----- GET A DRINK
YOU HAVE TRAVELLED 8 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 4
YOUR CAMEL THANKS YOU!
THE PYGMIES HAVE CAPTURED YOU. CAMEL AND PEOPLE SOUP IS
THEIR FAVORITE DISH !!!!!

WANT A NEW CAMEL AND A NEW GAME ? Y
GOOD LUCK AND GOOD CAMELING !!
YOU ARE IN THE MIDDLE OF THE DESERT AT AN OASIS.
YOU HAVE TRAVELLED 0 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 3
YOUR CAMEL IS BURNING ACROSS THE DESERT SANDS.

YOU HAVE TRAVELLED 6 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 2
YOUR CAMEL LIKES THIS PACE.
-----W A R N I N G----- GET A DRINK
YOU HAVE TRAVELLED 8 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 1
BETTER WATCH FOR AN OASES !
WHAT IS YOUR COMMAND? 2
YOU HAVE BEEN CAUGHT IN A SANDSTORM.....GOOD LUCK!
YOUR NEW POSITION IS 12 MILES SO FAR!
YOUR CAMEL LIKES THIS PACE.
THE PYGMIES ARE 10 MILES BEHIND YOU.
YOU HAVE TRAVELLED 20 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 3
YOU DIRTY RAPSCELLION! YOU RAN YOUR POOR CAMEL TO DEATH !!
YOU DIED IN THE DESERT.
YOUR BODY WAS EATEN BY VULTURES AND IMPORTED CANNIBALS !!!

WANT A NEW CAMEL AND A NEW GAME ? Y
GOOD LUCK AND GOOD CAMELING !!
YOU ARE IN THE MIDDLE OF THE DESERT AT AN OASIS.
YOU HAVE TRAVELLED 0 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 2
YOU HAVE ARRIVED AT AN OASES-----YOUR CAMEL IS
FILLING YOUR CANTEEN AND EATING FIGS.
YOUR CAMEL LIKES THIS PACE.
YOU HAVE TRAVELLED 3 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 2
YOUR CAMEL LIKES THIS PACE.
YOU HAVE TRAVELLED 11 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 2
YOUR CAMEL LIKES THIS PACE.
-----W A R N I N G----- GET A DRINK
THE PYGMIES ARE 7 MILES BEHIND YOU.
YOU HAVE TRAVELLED 14 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 1
BETTER WATCH FOR AN OASES !
WHAT IS YOUR COMMAND? 2
YOUR CAMEL HURT HIS HUMP.
LUCKILY THE PYGMIES WERE FOOTWEARY !!!
YOUR CAMEL LIKES THIS PACE.
THE PYGMIES ARE 11 MILES BEHIND YOU.
YOU HAVE TRAVELLED 21 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 2
YOUR CAMEL LIKES THIS PACE.
THE PYGMIES ARE 15 MILES BEHIND YOU.
YOU HAVE TRAVELLED 28 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 2
YOU HAVE ARRIVED AT AN OASES-----YOUR CAMEL IS
FILLING YOUR CANTEEN AND EATING FIGS.
YOUR CAMEL LIKES THIS PACE.
THE PYGMIES ARE 13 MILES BEHIND YOU.
YOU HAVE TRAVELLED 37 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 2
WILD BERBERS HIDDEN IN THE SAND HAVE CAPTURED YOU.
LUCKILY THE LOCAL SHEIK HAS AGREED TO THEIR RANSOM-
DEMANDS.....BUT.....WATCH FOR THE PYGMIES !!!
YOU HAVE A NEW CHOICE OF SUB-COMMANDS:
#7 ATTEMPT AN ESCAPE
#8 WAIT FOR PAYMENT
YOUR SUB-COMMAND ? 7
CONGRADULATIONS, YOU SUCCESSFULLY ESCAPED !!!!
THE PYGMIES ARE 4 MILES BEHIND YOU.
YOU HAVE TRAVELLED 37 MILES ALLTOGETHER.
WHAT IS YOUR COMMAND? 6
YOU DIED IN THE DESERT.
THE LOCAL SHEIK NOW USES YOUR SKULL FOR A CHANGE PURSE !!!

WANT A NEW CAMEL AND A NEW GAME ? NO

CHICKEN

Chase

CHASE puts you in a maze made up of high-voltage fences and posts. This in itself isn't too unpleasant but there're also the five interceptor robots bent on just one thing—your destruction. If these robots touch you ... that's the end of the game (and you!). There's one hope—make the robots hit the maze, or each other (they're like people—sometimes they'd rather be alone). If you destroy them all, you win! If you find yourself in a totally hopeless situation, you have the option of making a tremendous leap to a random location (which may well be on top of a fence or a guard).

At the end of the game, you may replay with the same or different starting conditions.

I believe this game was originally created by Mac Oglesby. It was then modified by Bill Cotter and further improved by Arnold Loveridge. An intermediate version appeared in *Creative Computing*, Jan/Feb 1976.

RUN

Close Encounters

In this game, you are situated at the center of a target area for a UFO. The program assigns coordinates 0,0 to your location. You are given information as to the course of the UFO in degrees longitude and degrees latitude and also its speed. You then have two alternatives. One, you can attempt to shoot the UFO out of the sky with an ICBM or you can do nothing and hope that air friction will cause the course of the UFO to deviate or to burn up.

A knowledge of mathematical coordinate systems will be of some assistance in winning this game, although you'll probably be able to discover a reasonably good strategy by yourself using trial and error if you play enough games.

This program was originally written by Chris Falco.

RUN

CLOSE ENCOUNTERS
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

YOU ARE SITUATED AT COORDINATES (0,0). A UFO IS HEADING FOR IMPACT AT THAT LOCATION.

AT FIRST TRACK, THE UFO IS ON A COURSE OF 55 DEGREES LONGITUDE AND 133 DEGREES LATITUDE.

(ALSO IT'S FALLING AT A SPEED OF 2562 MILES/PER HOUR)

YOU HAVE THE FOLLOWING ALTERNATIVES:

A) YOU CAN ATTEMPT TO SHOOT THE UFO OUT OF THE SKY. OR
B) YOU CAN DO NOTHING, AND HOPE THAT AIR FRICTION WILL CAUSE THE COURSE OF THE UFO TO DEVIATE, AND THUS MISS YOUR LOCATION.

WHAT IS YOUR PLAN OF ACTION (A OR B)? B

MILES	SPEED	LONGITUDE	LATITUDE	COURSE

CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS PROGRAM WILL SHOW YOU A CARD TRICK. AFTER THE FIRST DEAL PICK A CARD AND TYPE THE NUMBER OF THE COLUMN CONTAINING IT. THE DEALER WILL THEN PICK UP THE CARDS, A COLUMN AT A TIME, AND WILL DEAL THEM OUT AGAIN HORIZONTALLY. WHEN HE FINISHES EACH TIME, TYPE THE NUMBER OF THE THE NEW COLUMN CONTAINING YOUR CARD. FOLLOWING THE LAST DEAL THE DEALER WILL TURN OVER THE CARDS, ONE AT A TIME, UNTIL HE REACHES THE ONE YOU PICKED.

OOPS!!! YOUR CARD IS THE 4 OF HEARTS.

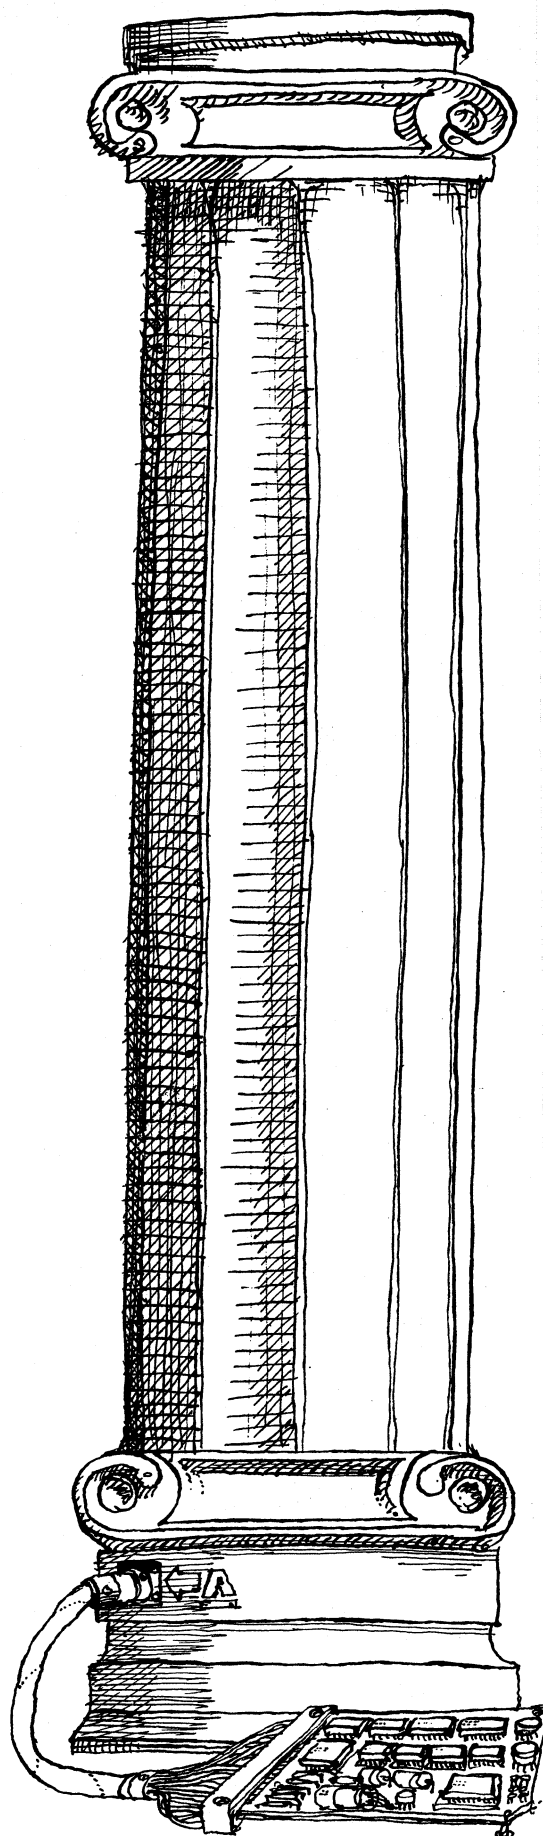

This program is a computer version of an old card trick which never fails to get some oohs and aaahs from the uninitiated. The dealer, or magician, takes twenty-one random cards, deals them out in three piles of seven cards each. You then tell him which column (or which pile) contains your card. He then picks up the three columns from right to left, putting the right pile on the top, and then deals the deck out again horizontally. In other words the top card of the right column now becomes the top card of the left column; the second card in the right column now becomes the first card in the middle column; the third card of the right column becomes the first card in the third column, and so on. After he deals out all twenty-one cards in this way, you again tell him which column your card appears in. The magician then picks up the three piles in the same order and deals them out once again. Again you tell him which column contains your card. He then deals the cards out one by one face up and identifies yours when he comes to it. Don't ask me how he does it! Maybe you can figure it out from the program, but it works every time.

This program was originally written by Alan Barnes.

This children's card game for any number of players is also called memory, or pelmanism. It is easy to play and is an excellent test of memory and observation. The computer version here simulates the actual game except that it only allows one player to play. In the actual game, one player shuffles a deck of playing cards and lays them face down on a table in all directions and so that no card is touching another. Each player tries to collect as many cards as possible by turning up pairs with the same rank per a number or picture. The first player to go turns over two cards at random and allows the other players to see them. If the rank of the two cards is the same, for example, two aces or two kings, he takes them and may turn over two more cards. He continues in this way until he turns over two cards that do not match. These cards are then placed back down in their original positions, face down, and his turn then ends. The play then passes to the next player. This player turns up one card. If it matches one that has already been turned over, he must try to remember where that card is. If he is successful, he takes the pair. He continues his turn until he fails to turn over a matching pair. Play continues in turn until all the cards have been collected. The winner is the player with the most cards at the end of the game.

In this computer version of the game, the cards are numbered on their face down side from one to fifty-two. As you turn over two cards, their rank is typed on the terminal. If they do not match, their rank is obliterated by successive type-overs with other characters. This is analogous to the situation of placing the cards back down on the table face down. Also in the computer version of the game there is only one player trying to get all fifty-two cards in as few moves as possible.

This game is good fun on a CRT terminal. Also, why not try modifying it to allow play by two or more players?

Condot

This is the old childhood favorite of "connect the dots." The objective is to carve out squares of "real estate" with the computer as an able adversary. The player who connects the two dots which complete a square gets ownership of that square. In addition, the player gets the added bonus of moving once more. This can be quite advantageous in certain situations. A nine-square grid is provided as a playing board.

A sample of the grid follows with an identification of each coordinate where a line may be drawn.

(1,2)	(1,4)	(1,6)	
(2,1)	(2,3)	(2,5)	(2,7)
(3,2)	(3,4)	(3,6)	
(4,1)	(4,3)	(4,5)	(4,7)
(5,2)	(5,4)	(5,6)	
(6,1)	(6,3)	(6,5)	(6,7)
(7,2)	(7,4)	(7,6)	

You'll find it interesting to note that the computer mirrors the player's move in so far as possible. You may also find that the game moves rather slowly, especially for the first three or four moves. Be patient! Once squares begin to fall, the game moves swiftly to its conclusion.

There are some modifications that you may wish to consider if you are going to adopt this program for regular use. In addition to improving the REM statements in the program, I would suggest:

1. Modifying the program so that the grid is printed after *both* players have moved (rather than each time a move is made);
2. Modifying the program so that once a player had ownership of a majority of the squares, the game would end rather than proceed to its inevitable conclusion; and
3. Modify the program so that the player's initials appear in each square he captures.

The program is by Chuck Lund; the writeup by Pete Olivieri. It originally appeared in *Creative Computing*, Jan/Feb 1976.

INSTRUCTIONS? YES

THIS NAVAL WAR GAME IS PLAYED ON A 10 BY 10 MATRIX
YOU ARE THE SUB; THE COMPUTER IS A CARGO SHIP AND ITS TWO
DESTROYERS. THE SHIP STARTS IN SQUARE 100 AND RANDOMLY MOVES
TO SQUARE 1, MOVING 0,1,2,OR 3 SQUARES AT A TIME.
ONE OF THE SHIP'S DESTROYERS STARTS AT SQUARE 78 AND MOVES
RANDOMLY 0,1,2 OR 3 SQUARES AT A TIME SEARCHING FOR THE SUB.
THE OTHER DESTROYER STAYS WITHIN ONE SQUARE OF THE SHIP AS
AN ESCORT. THE SUB STARTS IN SQUARE 12, CAN MOVE UP,DOWN,
LEFT OR RIGHT 1 SQUARE AT A TIME, 2 MOVES PER TURN,AND IT
HAS TORPEDOES WHICH IT CAN FIRE 1 AT A TIME IN ANY STRAIGHT
LINE. AFTER EACH SUB MOVE, THE PERISCOPE WILL SEARCH
EACH ADJACENT SQUARE FOR THE SHIP. ALSO RANDOM RECONNAISSANCE
REPORTS WILL BE MADE. THE SEQUENCE OF PLAY IS:

- 1 SHIP AND DESTROYERS MOVE
- 2 YOUR MOVE
- 3 YOU CAN FIRE A TORPEDO
- 4 PERISCOPE SEARCH
- 5 YOUR MOVE AGAIN
- AND BACK TO 1

THE SUB WINS IF IT SUCCEEDS IN HITTING THE SHIP WITHIN 4
TORPEDOES WITHOUT MOVING TO A SQUARE OCCUPIED BY A DESTROYER.

TO 'FIRE?' ANSWER:NO,L,R,U,D,LU,LD,RU,OR,RD.
'L'=LEFT,'R'=RIGHT,'U'=UP,'D'=DOWN,'LU'=LEFT UP,'RU'=RIGHT
UP,OR 'RD'=RIGHTDOWN

This is a naval war game played on a 10 by 10 grid. You are a submarine and the computer plays the role of the convoy consisting of a cargo ship and two destroyers. One destroyer acts as the escort traveling alongside the cargo ship, while the other searches for the submarine and tries to destroy it. The destroyer which is searching for the submarine moves from zero to three squares at a time, searching. The other destroyer stays within one square of the ship. The submarine starts in square #12 and can move up, down, left, or right one square at a time with two moves per turn. It has four torpedoes which may be fired one at a time in any straight direction, horizontally, vertically, or diagonally.

The game ends when either the submarine destroys the cargo ship or when one of the two destroyers gets the submarine.

Corral

CORRAL is a game program inspired by Harry (short for Aragon), a horse acquired in a rash moment of indulgence for a teen-age daughter. Harry, in his own inimitable style, taught us much about the care, feeding and psychology of the equine species. Some of that hard-won psychology has found its way into CORRAL, which is a one-dimensional simulation of the two- (and almost three-) dimensional problem of catching Harry for anything other than food. The main reason for confining Harry's alter ego in the computer to only one dimension is simply to conserve paper on hard-copy terminals. Even so, the presentation is very effective on a video display unit.

The corral itself is bounded by a pair of siderails represented by upper-case I characters separated by 21 spaces. The cowboy C always enters beside the leftmost rail while the horse H is happily mooching somewhere between positions 10 and 18 with a bias towards the right. This bias and the various other behavioral peculiarities of the horse are governed by two data matrices (statements 90 and 100) which may be altered to vary the beast's temperament from wild to docile depending on the data distribution.

If the horse bolts, a check is made (line 450) to ensure that it does not reach a position less than one space away from the cowboy. Occasionally, the horse bolts to a position more advantageous to the cowboy, just as in real life, but usually the opposite is true, particularly when it bolts as a result of an incautious approach by the cowboy. So heed with care the advice for the cowboy not to advance by more than half the separation in any one move except when adjacent to the horse, of course!

The probability that the horse may kick when the cowboy moves close is set by the IF statement at line 500. The cowboy is immobilized for from one to five moves, while the horse canters happily away from the scene of his triumph. If this happens more than a certain (random) number of times the round-up is terminated by the departure of the cowboy in an ambulance.

Occasionally the horse decides to engage in a friendly dance around the cowboy, but remember that random number generators have no soul and the result is often vile treachery as the horse delivers a fatal kick at the very moment when a successful catch seems assured. On the other hand, the skill of an accomplished CORRAL cowboy can result in a catch within three moves with no injuries sustained. You either have it or you have not, as the saying goes. In the latter case the

program allows a maximum of 100 moves before relegating the luckless cowboy to cookhouse chores.

Computer freaks with multi-color graphics will no doubt be dissatisfied with such prosaic symbols as H and C for the horse and cowboy. A fully animated CORRAL in living color (with sound effects by a music or speech synthesizer—a talking horse yet!) should not be too difficult to achieve.

Program and description are by Colin Keay.

Countdown

The program Countdown is based on the program Guess in which the computer chooses a random number and then gives you clues whether you are too high or too low until you finally get the number. In Countdown, the program adds a little interest to this guessing game by giving you a certain number of tries to get the mystery number between one and ten before your schoolbuilding explodes. Using a good guessing strategy should allow you to get any number in four or fewer tries. If you take more than four tries, the building goes "boom." To add a little more interest to the game, you may want to make the maximum number of tries three. To do this change the value of T in statement 45 from 4 to 3.

Countdown was written by Mark Chambers.

Dealer x 5

In this game, you, the player, are given \$100 to start with. You then play five card games loosely modeled on casino gambling games, but with peculiar variations. The five games are well-explained in the rules.

This game was written by Thomas Carey.

RUN

DEALER'S CHOICE
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS PROGRAM WILL SIMULATE THE T.V. SHOW, DEALER'S CHOICE.
YOU HAVE \$100 TO START WITH. ENJOY THE GAME.

FOR THE FIRST GAME, WE WILL PLAY ON THE WHEEL OF CHANCE.
THE OBJECT IS SIMPLE. GUESS WHAT SUITE WILL APPEAR ON THE
WHEEL AND YOU WILL GET PAID AT THOSE ODDS IF YOU ARE RIGHT.
THEY ARE AS FOLLOWS:

1=DIAMONDS AT 11 TO 1 ODDS 2=SPADES AT 1 TO 1 ODDS.
3=HEARTS AT 3 TO 1 ODDS 4=CLUBS AT 3 TO 1 ODDS.
YOU MAY BET UP TO \$25. GOOD LUCK!

WHAT SUITE DO YOU WANT? 1
WHAT IS THE BET? 25
O.K. NOW THAT YOUR BET IS IN, WE WILL SPIN
THE WHEEL, GOOD LUCK!
THE WHEEL IS SLOWING DOWN.
THE WHEEL IS STOPPING.
THE SUITE IS
**** 1 ****
YOU WIN ON DIAMONDS
AT THE END OF PART 1, YOU HAVE \$ 375

THIS IS THE GAME OF IN BETWEEN. THE OBJECT IS: 5 CARDS WILL
BE DEALT OUT. IF ANY CARD IS LESS THAN A 3 OR GREATER THAN A
10, THE GAME IS OVER. YOU MAY BET UP TO \$30. YOUR MONEY
WILL BE DOUBLED EACH TIME YOU ARE RIGHT. GOOD LUCK!

WHAT IS THE BET? 40
***YOU BET OVER THE HOUSE LIMIT ***
WHAT IS THE BET? 30
CARD NUMBER 1 IS A 4
YOU ARE STILL IN THE GAME. YOU HAVE 60
STOP OR GO? GO
CARD NUMBER 2 IS A 4
YOU ARE STILL IN THE GAME. YOU HAVE 120
STOP OR GO? GO
CARD NUMBER 3 IS A 7
YOU ARE STILL IN THE GAME. YOU HAVE 180
STOP OR GO? STOP
YOU WIN. AT THE END OF PART 2, YOU HAVE \$ 555

THIS IS THE GAME OF BLACKJACK (DEALER'S CHOICE STYLE)
THE OBJECT IS TO BEAT THE DEALER WITH OVER 17 OR 21 OR
UNDER. YOU MAY BET UP TO \$50. YOU MAY STOP WHEN YOU WISH.
IF YOU MAKE BLACKJACK, YOUR MONEY IS DOUBLED.
IF THE HOUSE DEALS OUT LESS THAN A TOTAL OF 17 IN 6 TRIES,
YOU WILL KEEP THE MONEY YOU BET. GOOD LUCK!

THE DEALER WILL GET HIS CARDS FIRST

HERE I GO
THE CARD IS A 1
SO FAR: 1
THE CARD IS A 10
SO FAR: 11
THE CARD IS A 6
SO FAR: 17
I STOP. THE TOTAL FOR ME IS 17
NOW YOU GO

WHAT IS THE BET? 50
YOUR CARD IS A 5
SO FAR THE TOTAL FOR YOU IS 5
STOP OR GO? GO
YOUR CARD IS A 12
SO FAR THE TOTAL FOR YOU IS 17
STOP OR GO? STOP
WE ARE THE SAME SO WE WILL PLAY AGAIN
THE DEALER WILL GET HIS CARDS FIRST

HERE I GO
THE CARD IS A 11
SO FAR: 11
THE CARD IS A 9
SO FAR: 20
I STOP. THE TOTAL FOR ME IS 20
NOW YOU GO

WHAT IS THE BET? 50
YOUR CARD IS A 1
SO FAR THE TOTAL FOR YOU IS 1
STOP OR GO? GO
YOUR CARD IS A 12
SO FAR THE TOTAL FOR YOU IS 13
STOP OR GO? GO
YOUR CARD IS A 1
SO FAR THE TOTAL FOR YOU IS 14
STOP OR GO? GO
YOUR CARD IS A 12
SO FAR THE TOTAL FOR YOU IS 26
THE DEALER BEAT YOU. YOU LOSE
AT THE END OF PART 3, YOU HAVE \$ 325

NOW WE ENTER THE LAST CHANCE ROUND. IF YOU MAKE UP TO
\$300 YOU WILL BE ABLE TO GO INTO THE BONUS ROUND. THE
OBJECT IS TO GUESS INTO WHICH CATEGORY THE TOTAL OF 5 CARDS
WILL ADD UP TO. THESE ARE THE CATEGORIES:

1=31-40 AT 1 TO 1 ODDS 2=41-50 AT 3 TO 1 ODDS
3=21-31 AT 3 TO 1 ODDS 4=6-20 AT 20 TO 1 ODDS
GOOD LUCK!!

AT THIS POINT IN THE GAME YOU HAVE \$ 325
WHAT CATEGORY DO YOU WANT? 2
WHAT IS THE BET? 25
THE CARDS ARE NOW BEING ADDED UP
GOOD LUCK!
CARD NUMBER 1 IS A 1
SO FAR: 8
CARD NUMBER 2 IS A 11
SO FAR: 19
CARD NUMBER 3 IS A 8
SO FAR: 27
CARD NUMBER 4 IS A 7
SO FAR: 34
CARD NUMBER 5 IS A 10
SO FAR: 44
AT THE END OF THE GAME YOU HAVE A GRAND TOTAL OF \$ 400
YOU ARE ELIGIBLE FOR THE BONUS ROUND.
DO YOU WANT TO PLAY IT? YES
THIS IS THE BONUS ROUND. IF YOU GET A TOTAL OF 1,000
WITHOUT GETTING A SPADE IN THE ROLLS, YOU WILL GET
A GRAND PRIZE OF \$10,000.00. YOU MAY STOP AT ANY POINT
DURING THE GAME. YOU WILL KEEP WHAT YOU MADE. GOOD LUCK!

THE DICE ARE ROLLING
GOOD LUCK.
THE DICE ARE
****SPADES 200 ****
TOTAL 200
YOU LOSE THE MONEY FROM THE LAST CHANCE
ROUND BUT YOU STILL HAVE A GRAND TOTAL OF \$ 400
THIS IS THE END OF THE GAME. I HOPE YOU ENJOYED IT.

Deepspace

Deepspace is another version of a space battle. You become the commander of either a scout ship, cruiser, or battleship. You then pick the weapons, and planetary system to patrol, and it's time to do battle.

The closer you get to the enemy, the better your chance of destroying him. Unfortunately, his chance of destroying you also improves. If you get too close, you can damage yourself; when a vessel's damage rating reaches or exceeds 100, it's destroyed.

Suggestion: Change the time between reports—this will shorten the game by allowing you to get closer faster.

Deepspace originally appeared in *Creative Computing*, Mar/Apr 1976.

RUN

DEEPSPACE
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS IS DEEPSPACE, A TACTICAL SIMULATION OF SHIP TO SHIP COMBAT IN DEEP SPACE.

DO YOU WISH INSTRUCTIONS? YES

YOU ARE ONE OF A GROUP OF CAPTAINS ASSIGNED TO PATROL A SECTION OF YOUR STAR EMPIRE'S BORDER AGAINST HOSTILE ALIENS. ALL YOUR ENCOUNTERS HERE WILL BE AGAINST HOSTILE VESSELS. YOU WILL FIRST BE REQUIRED TO SELECT A VESSEL FROM ONE OF THREE TYPES, EACH WITH ITS OWN CHARACTERISTICS:

TYPE	SPEED	CARGO SPACE	PROTECTION
1 SCOUT	10X	16	1
2 CRUISER	4X	24	2
3 BATTLESHIP	2X	30	5

SPEED IS GIVEN RELATIVE TO THE OTHER SHIPS.

CARGO SPACE IS IN UNITS OF SPACE ABOARD SHIP WHICH CAN BE FILLED WITH WEAPONS.

PROTECTION IS THE RELATIVE STRENGTH OF THE SHIP'S ARMOR AND FORCE FIELDS.

ONCE A SHIP HAS BEEN SELECTED, YOU WILL BE INSTRUCTED TO ARM IT WITH WEAPONRY FROM THE FOLLOWING LIST:

TYPE	CARGO SPACE	REL. STRENGTH
1 PHASER BANKS	12	4
2 ANTI-MATTER MISSILE	4	20
3 HYPERSPACE LANCE	4	16
4 PHOTON TORPEDO	2	10
5 HYPERON NEUTRALIZATION FIELD	20	6

WEAPONS #1 & #5 CAN BE FIRED 100 TIMES EACH; ALL OTHERS CAN BE FIRED ONCE FOR EACH ON BOARD.

A TYPICAL LOAD FOR A CRUISER MIGHT CONSIST OF:

1-#1 PHASER BANK	= 12
2-#3 HYPERSPACE LANCES	= 8
2-#4 PHOTON TORPEDOES	= 4

24 UNITS OF CARGO

A WORD OF CAUTION: FIRING HIGH YIELD WEAPONS AT CLOSE (<100) RANGE CAN BE DANGEROUS TO YOUR SHIP AND MINIMAL DAMAGE CAN OCCUR AS FAR OUT AS 200 IN SOME CIRCUMSTANCES.

RANGE IS GIVEN IN THOUSANDS OF KILOMETERS.

MANUEVER CHART

- 1 FIRE PHASERS
- 2 FIRE ANTI-MATTER MISSILE
- 3 FIRE HYPERSPACE LANCE
- 4 FIRE PHOTON TORPEDO

- 5 ACTIVE HYPERON NEUTRALIZATION FIELD
- 6 SELF-DESTRUCT
- 7 CHANGE VELOCITY
- 8 DISENGAGE
- 9 PROCEED

YOU HAVE A CHOICE OF THREE SYSTEMS TO PATROL.

1 ORION

2 DENEBO

3 ARCTURUS

SELECT A SYSTEM(1-3)? 3

WHICH SPACECRAFT WOULD YOU LIKE(1-3)? 2

YOU HAVE 24 UNITS OF CARGO SPACE TO FILL WITH WEAPONRY.

CHOOSE A WEAPON AND THE AMOUNT YOU WISH.? 1,1

YOU HAVE 12 UNITS OF CARGO SPACE TO FILL WITH WEAPONRY.

CHOOSE A WEAPON AND THE AMOUNT YOU WISH.? 2,1

YOU HAVE 8 UNITS OF CARGO SPACE TO FILL WITH WEAPONRY.

CHOOSE A WEAPON AND THE AMOUNT YOU WISH.? 3,1

YOU HAVE 4 UNITS OF CARGO SPACE TO FILL WITH WEAPONRY.

CHOOSE A WEAPON AND THE AMOUNT YOU WISH.? 4,2

BOOOOOOMM!!!
YOU BLEW IT. THE BUILDING BLEW UP.
THE BOMB WAS LOCATED AT THE COORDINATES(L,U,H): 76 30 50

In this game, you are in an experimental building with one million rooms in it. The building is one hundred rooms long, one hundred rooms wide, and one hundred rooms high.

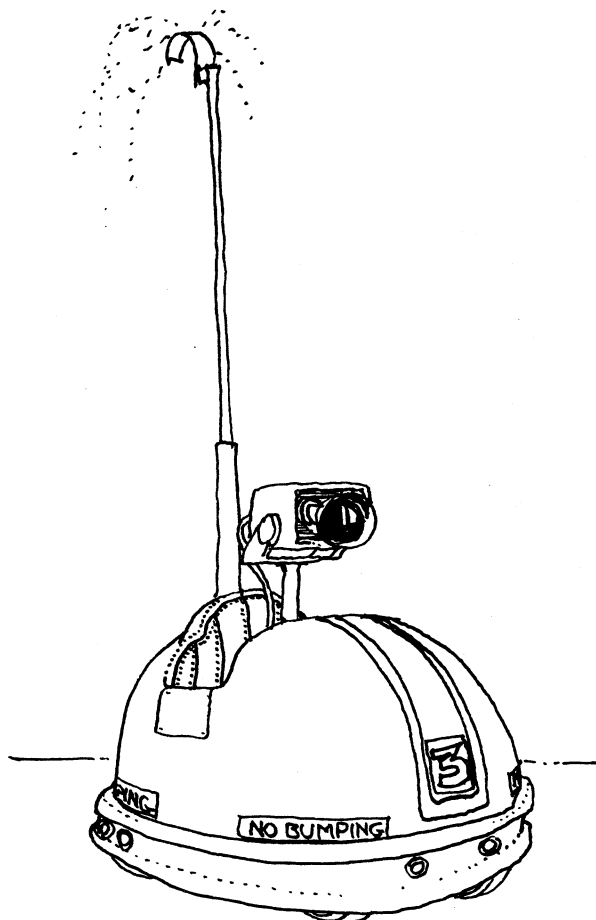

You have just received a telephone call from a mad bomber who tells you he has planted a bomb someplace in the building. Fortunately you are armed with a bomb detector that registers a stronger and stronger signal as you get closer to the bomb. You start at the bottom right-hand door of the building, at the room 0,0,0. In response to the signals from your detector, every ten seconds you may try a new room to search for the bomb. You have two hundred seconds or twenty trials to find it.

It's fairly easy to find the bomb once you get the knack of how your detector works. However, we're not going to spoil it for you and tell the secret.

Dodgem

DODGEM is a game originally devised in 1972 by Colin Vout, then a student at the University of Cambridge, England. It got its major publicity from Martin Gardner who discussed it in the June 1975 issue of *Scientific American*. Complete instructions are in the sample run.

It may be played by two players in which case the computer is the referee, or by one player against the computer. The computer, incidentally, plays uncommonly well. This is not surprising since Dodgem was written by the very talented and prolific Mac Oglesby.

RUN

DODGEM
CREATIVE COMPUTING
MORRISTOWN NEW JERSEY

DO YOU WANT INSTRUCTIONS FOR DODGEM? Y

HERE'S A SAMPLE PLAYING BOARD:

```
1 . . . .
2 . . . .
3 . . . .
4 . . . .
. A B C D
```

TWO SETS OF PIECES (DIGITS AND LETTERS) RACE AT RIGHT ANGLES ACROSS A SQUARE BOARD. VACANT LOCATIONS ARE SHOWN AS PERIODS. YOU CHOOSE THE BOARD SIZE (THE ONE ABOVE IS SIZE 5.)

```
N
:
W---E
:
S
```

THE OBJECT IS TO MOVE ALL OF YOUR PIECES ACROSS THE BOARD AND OFF THE OPPOSITE EDGE. DIGITS LEAVE THE BOARD ONLY AT THE EASTERN EDGE; LETTERS ONLY AT THE NORTHERN. THE WINNER IS THE PLAYER WHOSE PIECES HAVE ALL LEFT THE BOARD.

THE PLAYERS GO IN TURN, MOVING ONE OF THEIR PIECES TO AN ADJACENT LOCATION WHICH IS EITHER OFF THE BOARD OF CURRENTLY VACANT. THERE ARE NO DIAGONAL MOVES, NO JUMPS AND NO CAPTURES. DIGITS CANNOT MOVE WEST, NOR LETTERS MOVE SOUTH.

TO MOVE A PIECE, TYPE ITS NAME AND THE FIRST LETTER OF THE DESIRED DIRECTION. EXAMPLES:

2E MEANS THAT PIECE 2 WANTS TO GO EAST
BW MEANS THAT PIECE B WANTS TO GO WEST.

NOTE: YOU FORFEIT THE GAME IF YOUR MOVE LEAVES YOUR OPPONENT WITHOUT ANY LEGAL MOVE.

LASTLY, YOU MAY TYPE R TO RESIGN AND H FOR HELP.

BOARD SIZE (3-6)? 4
HOW MANY PLAYERS (1 OR 2)? 1
OK, THE COMPUTER WILL MOVE THE DIGITS.
WHO MOVES FIRST (1=COMPUTER, 2=YOU)? 2

HERE WE GO...

```
1 . . .
2 . . .
3 . . .
. A B C
```

LETTERS MOVE? CN
THE DIGITS MOVE: 1E

```
. 1 . .
2 . . .
3 . . C
. A B .
```

LETTERS MOVE? AN
THE DIGITS MOVE: 1E

```
. . 1 .
2 . . .
3 A . C
. . B .
```

LETTERS MOVE? CN
THE DIGITS MOVE: 1E

```
. . . 1
2 . . C
3 A . .
. . B .
```

LETTERS MOVE? CN
 ILLEGAL MOVE OR BAD INPUT.
 INPUT IGNORED. TYPE H FOR HELP.
 LETTERS MOVE? H
 THE LETTERS HAVE THESE LEGAL MOVES:
 AN AE BN BE BU CV
 LETTERS MOVE? BN
 THE DIGITS MOVE: 1E

```

. . . .
2 . . C
3 A B .
. . . .

```

LETTERS MOVE? AN

Doors

In this cute little game, there are four doors in succession and you must open them to get the prize behind the last one. You have a key ring containing eleven keys numbered zero to ten (computer people have a different way of numbering things than normal people) and you have fourteen tries to open all four doors. As an added hooker, some keys may open more than one door. If at first you don't succeed, try, try again. The prizes behind the fourth door are well worth the patience in trying to get them all open.

Doors was conceived and written by Bill Ingram.

Drag

DRAG allows the user to design his own dragster and then race it against a dragster designed by another player or the computer. You must specify the horsepower, rear end ratio, tire width, and tire diameter. There are no limits to these parameters.

Aha! you say. "I'll just design a two million horsepower dragster!" But it doesn't work that way, because your mass is related to your engine size, and so you usually end up with a top speed of something like 33 MPH. The computer is extremely hard to beat, but it's rumored that it can be done. Note: on some systems the amount of time between printouts can be aggravatingly long.

This program came from the Hewlett-Packard User Library. It also appeared in *Creative Computing*, Jan/Feb 1977.

Dr. Z

Using DR.Z your computer "interacts" with you in true Rogerian form, never making a value judgment of your response.

DR.Z is multi-lingual and "professional confidence" is guaranteed, especially with a video display terminal. However, if you have a printer, try employing a unique language known only to you and Dr.Z.

If you would prefer to employ DR.Z in an educational mode, you might consider the following sequence of activities.

1. Discuss communication, exploring:
 - a. The role of spoken language
 - b. The role of written language
 - c. Non-verbal language
 1. facial expressions
 2. posture of body
 3. hand gestures
2. Experience a session with DR.Z.
3. Develop computerizations of other "purely human" situations.

Note: Don't mistake DR.Z for Eliza (or Doctor). In DR.Z, all the responses are "canned" and the computer makes no attempt to analyze your input in any way.

DR.Z was submitted to us anonymously by some students of Dr. Melvin Zeddies of San Diego.

HELLO THERE, I'M YOUR COMPUTER THERAPIST.
WHAT IS YOUR NAME? AND TELL ME SOMETHING ABOUT YOURSELF.
HOWEVER, DON'T TYPE MORE THAN ONE LINE. I TIRE EASILY.
? MY NAME IS STEVE. I'M TRYING TO FIX THIS PROGRAM.
WHAT DID YOU SAY YOUR NAME WAS AGAIN?
? STEVE
HOW DO YOU FEEL TODAY?
? TERRIBLE. IT IS TOO HOT OUTSIDE!!!

DO YOU THINK THIS IS REASONABLE IN LIGHT OF YOUR INTERESTS?

? WHAT ARE YOU TALKING ABOUT

DO YOUR FRIENDS FIND THIS ACCEPTABLE?

? SOMETIMES

WHY DO YOU THINK YOU FEEL THIS WAY?

? BECAUSE OF THE WEATHER

DO YOU THINK THAT THIS IS A NORMAL FEELING?

? YES

DO YOUR FRIENDS FIND THIS ACCEPTABLE?

? I JUST ANSWERED THAT

I THINK YOU ARE MAKING A GREAT ATTEMPT TO SOLVE YOUR DIFFICULTIES, AND I SEE NO NEED TO CONTINUE THIS SESSION ANY FURTHER.
STEVE WOULD YOU MAKE ANOTHER APPOINTMENT WITH MY COMPUTER FOR SOMETIME IN THE NEXT FEW WEEKS. WHAT DATE WOULD YOU PREFER?
? NEVER
THAT WILL BE FINE .
I'VE ENJOYED COMMUNICATING WITH YOU.
HAVE A NICE DAY.

Eliza

Description: ELIZA is a program that accepts natural English as input and carries on a reasonably coherent conversation based on the psychoanalytic techniques of Carl Rogers. You will have to forgive ELIZA for being a poor English student. You'll find that it is best not to use punctuation in your input, and you'll have to carry the conversation. But it does work!

How it works: In order to speak to you, ELIZA must: (1) get a string from the user, and prepare it for further processing; (2) find the keywords in the input string; (3) if a keyword is found, take the part of the string following the keyword and "translate" all the personal pronouns and verbs ("I" becomes "YOU", "ARE" becomes "AM", etc.); (4) finally, look up an appropriate reply based on the keyword which was found, print it and, if necessary, the "translated" string. ELIZA uses four types of program data to accomplish this:

(1) 36 keyword, such as "I AM", "WHY DONT YOU", and "COMPUTER". The keywords must be in order of priority, so ELIZA will key on "YOU ARE" before "YOU".

(2) 12 strings used for the translation or conjugation process. These are in pairs such that if one member of the pair is found, the other is substituted for it. Examples: "Y", "YOU", "AM", "ARE", etc.

(3) 112 reply strings. The strings are arranged in groups corresponding to the keywords. There is no fixed number of different replies for each keyword. Replies ending in a "*" are to be followed by the translated string, while the strings ending in normal punctuation are to be printed alone.

(4) Numerical data to determine which replies to print for each keyword. For each keyword there is a pair of numbers signifying (start of reply strings, number of reply strings). Thus the fifth pair of number, (10,4), means that the replies for the fifth keyword ("I DONT") start with the tenth reply string, and that there are four replies.

Detailed Explanation:

Lines 10-160: Initialization. Arrays and strings are dimensioned. N1, N2, and N3, which represent the number of keywords, number of translation strings, and number of replies respectively, are defined. Then the arrays are filled. S(keyword number) is the ordinal number of the start of the reply strings for a given keyword, R(keyword number)

is the actual reply to be used next, and N(keyword number) is the last reply for that keyword. Finally an introduction is printed.

Lines 170-255: User input section. This part of the program gets a string from the user, places a space at the start of the string and two at the end (to make it easier to correctly locate keywords and to prevent subscripting out of bounds), throws out all the apostrophes (so DONT and DON'T are equivalent), and stops if the word SHUT is found in the input string (which it takes to mean SHUT UP). ELIZA also checks for repetitive input by the user.

Lines 260-370: Keyword-finding section. ELIZA scans the input string for keywords and saves the keyword of highest priority temporarily in S, T, and F\$. If no keyword is found, the keyword defaults to number 36, NOKEYFOUND (which causes ELIZA to say something noncommittal) and it skips the next section.

Lines 380-555: Translation or Conjugation section. The part of the input string following the keyword is saved. Then pairs of translation strings, as described above, are read and upon the occurrence of one of these strings, the other is substituted for it. When this is done ELIZA makes sure there is only one leading space in the translated string.

Lines 560-640: Reply printing section. Using R(keyword number), S(keyword number), and N(keyword number), the correct reply is located. The pointer for the next reply is bumped and reset if it is too large. If the reply string ends in a "*" it is printed with the translated string, otherwise it is printed alone. The previously entered input string is saved to permit checking for repetitive input, and then ELIZA goes back for more input.

Limitations: Runs in 16K of memory.

Modifications: You can easily add, change, or delete any of the keywords, translation words, or replies. Remember, you will also have to change N1, N2, N3, and/or the numerical data. Just as a suggestion, if you decide to insert "ME" and "YOU" in the translation string list, put a nonprinting (control) character in YOU to prevent ELIZA from substituting I→YOU→ME. This means that YOU will always be assumed to be the subject of a verb, never the object, but resolving that difficulty is a whole different problem.

A Few Comments: The structures found in lines 120, 420, and 590 could be replaced by RESTORE NNNN statements if your BASIC has them. The use of an INSTR, SEARCH, or POS function to determine if one string is a substring of another would probably speed things up considerably (it takes ELIZA around 10 seconds to think of a reply).

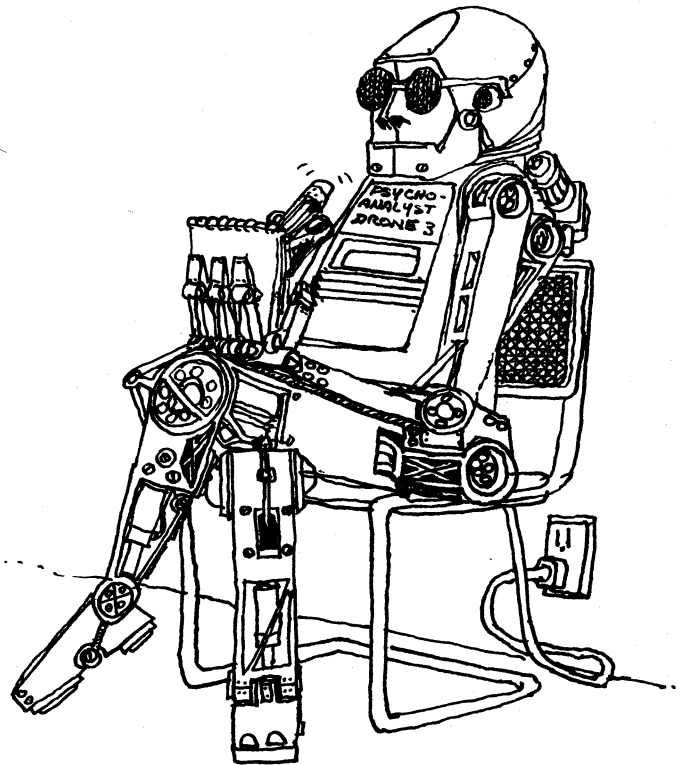

What it all means: we'll leave to you. Although this program is an inferior imitation of the original, it does work. It is pretty farfetched to believe that a psycholanalyst is nothing but a sentence-input-keyword-finder-conjugator-reply finder, but if you really think so, you can buy your computer a speech-recognition unit, a Computalker and a green couch, and charge \$75/hr! My computer, the doctor!

Geneology: ELIZA was originally programmed in LISP by Joseph Weizenbaum at MIT. It was converted to BASIC by Jeff Shrager and further modified to work in Microsoft BASIC by Steve North, who also wrote these notes.

Name	Usage
R(X),S(X),N(X)	See Text
I\$	Input string
K\$	Keyword string
C\$	Translated or conjugated string
F\$	Reply string, also used to save K\$ in scanning for keyword
R\$,S\$	Strings used in conjugation process
P\$	Previous input string
Z\$	Scratch (used for simulating RESTORE NNNN statement).
N1	Number of keywords
N2	Number of conjugation strings
N3	Number of replies
K	Keyword number
S,T	Used to save K and L when scanning for keyword
X,L	X,L Scratch. X is generally used for looping while L is used for scanning through strings
V	V Used for scanning for keyword string

ELIZA
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

HI! I'M ELIZA. WHAT'S YOUR PROBLEM?
? YOU
WE WERE DISCUSSING YOU-- NOT ME.
? BUT YOU ATR THE PROBLEM
OH, I ATR THE PROBLEM
? SO I MISSPELLED A WORD
SAY, DO YOU HAVE ANY PSYCHOLOGICAL PROBLEMS?
? NO DO YOU
YOU'RE NOT REALLY TALKING ABOUT ME, ARE YOU?
? ONLY BEHIND YOUR BACK
WHY ARE YOU CONCERNED ABOUT MY BACK
? BECAUSE I'M AFRAID TO CON FRONT YOU
DID YOU COME TO ME BECAUSE YOU ARE AFRAID TO CON FRONT I
? YOU SPEAK WIERD ENGLISH
WE WERE DISCUSSING YOU-- NOT ME.
? AM I GETTING THE BEST OF YOU
OH, I
? WHAT IS THAT SUPPOSED TO MEAN
WHY DO YOU ASK?
? WHY NOT
WHY DO YOU ASK?
? I ASKED FIRST
WHAT DOES THAT SUGGEST TO YOU?
? THAT YOU ARE NOT AS SMART AS YOU THINK
WHAT MAKES YOU THINK I AM NOT AS SMART AS I THINK
? YOU ARE MAKING A FOOL OUT OF YOURSELF
DOES IT PLEASE YOU TO BELIEVE I AM MAKING A FOOL OUT OF YOURSELF
? DON'T TWIST THE WORDS ON ME BUDDY
I SEE.
? DO YOU REALLY
YOU'RE NOT REALLY TALKING ABOUT ME, ARE YOU?
? YES
ARE YOU SURE?
? YES I AM SURE
DID YOU COME TO ME BECAUSE YOU ARE SURE
? I CAME BECAUSE I AM
HOW LONG HAVE YOU BEEN
? AS LONG AS POSSIBLE
I'M NOT SURE I UNDERSTAND YOU FULLY.
? SO I AM NOT THE GREATEST CONVERSATIONALIST
DO YOU BELIEVE IT IS NORMAL TO BE NOT THE GREATEST CONVERSATIONALIST
? YES
I SEE.
? HOW CAN YOU SEE WITHOUT ANY EYES
DON'T YOU BELIEVE THAT I CAN SEE WITHOUT ANY EYES
? NO SO PROVE IT
ARE YOU SAYING NO JUST TO BE NEGATIVE?
? ABSOLUTELY NOT
YOU ARE BEING A BIT NEGATIVE.
? SO YOU WANT TO FIGHT DO YOU
WE WERE DISCUSSING YOU-- NOT ME.
? DON'T BACK DOWN FRIEND
WHY DO YOU BRING UP THE TOPIC OF FRIENDS?
? I DON'T HAVE ANY FRIENDS
DON'T YOU REALLY HAVE ANY FRIENDS
? NO NOT REALLY
WHY NOT?
? BECAUSE I AM YOU AND YOU ARE ME AND WE ARE ALL TOGETHER
PERHAPS YOU WOULD LIKE TO BE YOU AND WE AM ALL TOGETHER
? SAY WHAT
DOES THAT QUESTION INTEREST YOU?
? DEFINITELY
COME COME ELUCIDATE YOUR THOUGHTS.
? DO YOU LIKE THE BEATLES
OH, I LIKE THE BEATLES
? HOW ABOUT THE BEACH BOYS
WHY DO YOU ASK?
? DO YOU DREAM OFTEN
YOU'RE NOT REALLY TALKING ABOUT ME, ARE YOU?
? DREAM ON
WHAT DOES THAT DREAM SUGGEST TO YOU?
? WHAT DREAM
WHAT ANSWER WOULD PLEASE YOU THE MOST?
? DO YOU SUBSCRIBE TO CREATIVE COMPUTING
WE WERE DISCUSSING YOU-- NOT ME.
? I AM AN IBM 370/168
DO YOU ENJOY BEING AN IBM 370/168
? I AM WORRIED ABOUT THE COMPETITION
DID YOU COME TO ME BECAUSE YOU ARE WORRIED ABOUT THE COMPETITION
? DON'T GET PERSONAL
CAN YOU ELABORATE ON THAT?
? I'M GETTING TIRED OF LISTENING TO YOU TO SHUT UP
SHUT UP...
OK

Father

This program loosely simulates a debate with your father about going out on Saturday night. After you win or lose the debate, then Saturday night approaches and you must decide whether or not to actually go out. When all is said and done, the computer will give you a score on a scale of minus seven to plus four. (This could have been a scale of zero to ten, but computers have this magic ability to give us scales of anything we want).

This program originated in the dungeons of Digital Equipment Corporation and was whipped into its present form by Victor Nahigian.

RUN

FATHER

CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

WANT TO HAVE A DEBATE WITH YOUR FATHER, EH??

DO YOU WANT INSTRUCTIONS? YES
YOU ARE GOING TO PLAY IN A GAME IN WHICH YOU WILL DISCUSS
A PROBLEM WITH YOUR FATHER AND ATTEMPT TO GET HIM TO
AGREE WITH YOU IN THREE TRIES.

FOR EACH STATEMENT YOU MAKE, I WILL TELL YOU WHAT
YOUR FATHER REPLIED.

YOU MUST SELECT YOUR STATEMENT FROM ONE
OF THE FOLLOWING SIX.

1. O.K. I WILL STAY HOME.
2. BUT I'D REALLY LIKE TO GO. ALL MY FRIENDS ARE GOING.
3. IF ALL MY WORK IS DONE, I SHOULD BE ABLE TO GO.
4. IF YOU LET ME GO OUT I'LL BABYSIT ALL NEXT WEEK
5. YOU NEVER LET ME DO WHAT I WANT TO DO.
6. I'M GOING ANYWAY!

WHEN A QUESTION MARK APPEARS, TYPE THE NUMBER
OF YOUR RESPONSE FOLLOWED BY A RETURN.

YOU WILL RECEIVE POINTS BASED ON HOW SUCCESSFULL YOU
ARE AT CONVINCING YOUR FATHER.

THE ISSUE IS:

YOU WANT TO GO OUT SATURDAY NIGHT.
YOUR FATHER OPPOSES THE IDEA.

WHEN YOU FIRST BRING UP THE IDEA, YOUR FATHER STATES:

NO, YOU CAN'T GO OUT ON A DATE SAT. NITE AND THAT'S THAT.

HOW WOULD YOU APPROACH YOUR FATHER

WHAT WOULD YOU SAY FIRST? 2

YOUR FATHER SAID:

I DON'T THINK YOU DESERVE TO GO OUT SAT. NITE.

WHAT IS YOUR REPLY? 3

YOUR FATHER SAID:

O.K. IF YOU DO THAT YOU CAN GO OUT SAT. NIGHT.

ON A SCALE OF -7 TO 4, YOUR SCORE WAS 2 POINTS.

IT IS NOW SAT. NIGHT, WHICH DO YOU DO?

1. GO OUT.
2. STAY HOME.

? 1

YOUR FATHER DIDN'T CHECK UP ON YOU.

YOUR SCORE IS NOW 2 POINTS.

WELL DONE!

WOULD YOU LIKE TO TRY AGAIN? YES

WHEN YOU FIRST BRING UP THE IDEA, YOUR FATHER STATES:

NO, YOU CAN'T GO OUT ON A DATE SAT. NITE AND THAT'S THAT.

HOW WOULD YOU APPROACH YOUR FATHER

WHAT WOULD YOU SAY FIRST? 1

AGREEMENT REACHED

ON A SCALE OF -7 TO 4, YOUR SCORE WAS -1 POINTS.

IT IS NOW SAT. NIGHT, WHICH DO YOU DO?

1. GO OUT.
2. STAY HOME.

? 2

YOUR FATHER CHECKED UP ON YOU.

YOUR SCORE IS NOW -1 POINTS.

YOU DIDN'T SUCCEED IN CONVINCING YOUR FATHER.

WOULD YOU LIKE TO TRY AGAIN? NO

OK

```

Flip

This game may be the only one so easy that even an animal could play it, yet hard for people to play even as well as random chance. It may be useful in training the intuition, and improving gamesmanship in speculation-type activities, where each player is trying to outguess the other's behavior and stay one step ahead.

On each turn, the program first selects 'yes' or 'no', but gives you no information about its decision. Therefore your guess on the first turn is pure chance, there is no skill involved. But soon the program starts using patterns in your behavior, making its decisions to increase the chance of your next guess being wrong. And to make it harder for you, the program doesn't strictly maximize its chances, but throws a little randomness into its decisions.

Variations

There are endless strategies for programming this game, for there could be almost infinitely many definitions of what a "pattern" is. No single algorithm could be "best", because it must assume a model of the human player, and people are different, even the same person from moment to moment. Any good algorithm must build or refine its model of the player, during the course of the game.

This particular program keeps an array of 16 probability estimates; the person's last two guesses, and whether they were right or wrong (16 situations altogether) determine which estimate is selected. The array (which depends on all previous play within the game) becomes a model or profile of the player, and it can be printed at end of game. Any probabilities far from .5 indicate predictable behavior in the corresponding situations. The profiles can be compared over time, or used to study strategy differences between people. They can also be compared with random profiles developed by playing games with random input such as coin flips, or (more easily) by modifying the program so that BASIC statements replace the human player and make guesses randomly (or by some other rule). In fact, different algorithms could play each other.

This particular implementation has two parameters: a memory factor (F1) which controls the decay rate of old learning when it is overridden by recent experience, and a randomness factor (F2) influencing the program's likelihood of making the decision suggested by the probability estimate. These are just two of innumerable optional parameters which could be used in programming FLIP.

The program and description were written by John S. James. They originally appeared in *Creative Computing*, Mar/Apr 1977.

RUN

FLIP
CREATIVE COMPUTING
MORRISTOWN NEW JERSEY

EXPLANATION (Y OR N)? Y
ON EACH TURN, YOU GUESS YES ('Y') OR NO ('N').
ONLY ONE IS CORRECT, AND THE PROGRAM HAS DECIDED
WHICH ONE, BEFORE YOU MAKE YOUR GUESS. AT FIRST
YOUR ODDS ARE 50%, PURE CHANCE. BUT LATER THE
PROGRAM WILL TRY TO TAKE ADVANTAGE OF PATTERNS
IN YOUR GUESSING.

GAME ENDS AFTER 50 TURNS; A SCORE OF 24 OR MORE
IS GOOD. PROGRAM TELLS WHEN YOU WIN A TURN,
BY TYPING AN ASTERISK ('*') AS THE FIRST
CHARACTER OF THE FOLLOWING LINE.

Four In A Row

In this game, eight pegs are put in a row, each one of which can hold eight rings. Each ring is marked with either an X or an O. You and an opponent alternate turns; in this case the opponent is the computer. On each turn you place a ring over one of the pegs, one through eight. The object is to get four X's or O's in a row, vertically, horizontally or diagonally. A glance at the sample run will show you how this process works.

While the computer already plays rather well, you may wish to experiment with improving the computer's play by changing the values in the data statements in lines 120 and 130. The first four values are awarded if a position yields one, two, three, or four in a row respectively, for the computer. The next four values are bonus points for making one, two, three, or four in a row in more than one direction with the same move. The next eight values (line

130) are dealt with in the same way for the human player; thus, these values are for defense.

The computer version of the game was written by James L. Murphy.

Geowar

This program very loosely represents a battlefield in which you, the player, are located at point 0,0. There are five enemy installations that may be located anywhere from 0,0 to 30,30 except for a clear zone from 0,0 to 10,10. The accompanying diagram should make this clear. Instead of the normal artillery type of game where you are lobbing projectiles onto your enemy installations, in this game you are firing some sort of laser missile in a very straight path which destroys everything in its path. If the missile flies within one unit either northwest or southeast of the target, or, of course, over the target directly, that target is destroyed. If it is within two units of the target, the missile will be shot down and that target will relocate to a new position one unit away from its previous position in some random direction.

Geowar is largely a guessing game with incomplete information given in its clues. Nevertheless it's fun to play and is a nice switch from just a plain "guess the mystery number game." It was written by Gary Lorenc and originally appeared in *Creative Computing*, May/June 1975.

RUN

GEOWAR
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU WANT A DESCRIPTION OF THE GAME? YES

THE FIRST QUADRANT OF A REGULAR COORDINATE GRAPH WILL SERVE AS THE BATTLEFIELD. FIVE ENEMY INSTALLATIONS ARE LOCATED WITHIN A 30 BY 30 UNIT AREA. NO TARGET IS INSIDE THE 10 BY 10 UNIT AREA ADJACENT TO THE ORIGIN, AS THIS IS THE LOCATION OF OUR BASE. WHEN THE MACHINE ASKS FOR THE DEGREE OF THE SHOT, RESPOND WITH A NUMBER BETWEEN 1 AND 90.

1. A DIRECT HIT IS A HIT WITHIN 1 DEGREE OF THE TARGET.
2. A HIT MUST PASS BETWEEN THE FIRST SET OF INTEGRAL POINTS NW AND SE OF THE TARGET.
3. A SCARE MUST PASS BETWEEN THE NEXT SET OF INTEGRAL POINTS NW AND SE OF THE TARGET, AND CAUSES THE ENEMY TO RELOCATE A MAXIMUM OF 1 UNIT IN ANY DIRECTION.

```
SCARE*****
*           *

Guess-It

Many, if not most, two person games that are played on a computer are based on fixed rules that assure that if one player uses these rules and a rational playing strategy then that player wins. If both players use these rules and rational playing strategies then the winner is usually determined by who goes first. Tic-Tac-Toe, Batnum and Even are examples of games of this type.

A more interesting type of game is one where the playing strategy is of mixed type. This means that the best move, in most cases, depends on what moves have already been made and a player can only determine the probability of the best move. Standard card games (Bridge, Poker etc.) are usually games of mixed type.

Most two person games of mixed type are either so complicated that the best strategies are not known or they are so simple that they are not interesting to play. The game of Guess-It is an exception to this pattern. The element of bluffing, which plays a central role in this game, makes the game interesting. The optimal strategy for playing this two person game of

mixed type has been determined by Rufus Isaacs².

This program simulates the game of Guess-It. The computer plays according to the optimal strategy determined by Isaacs. Lines 1740 to 1930 give instructions on how to play the game. The number of numbers in each hand is determined in line 70. (It is set at 5. This is the value Isaacs used in his analysis of the game.) To change the number of numbers in each hand only the value of H in line 70 needs to be changed.

To play the game in an optimal way decisions need to be made based on the win probabilities $P(m,n)$ where m is the number of numbers in your hand and n is the number of numbers in your opponent's hand. The matrix of these win probabilities is computed in lines 80 to 180.

To match the optimal strategy of the computer some type of randomizing device based on the win probabilities $P(m,n)$ is required. (See (1) and (2) for descriptions of how to make and use such devices. These devices only work when there is a maximum of 5 numbers in each hand.)

The decision as to whether or not a number asked about by a player was a bluff is made in line 750. The decision to bluff or not when asking about a number is made in line 940.

The program gives the player the option of going first. The win probability, $P(5,5)$, in this case is .538. Therefore the player going first has a slightly better than even chance of winning assuming that both players use the optimal strategy.

There are two reasons why bluffing is important in any strategy. If a player never bluffs, then any "ask" about a number that is not in the opponent's hand will result in a loss since the other player will know that it must be the down number. A successful bluff can lead the other player to make an incorrect guess of the down number.

The program and description were written by Gerard Kiernan of Manhattanville College, Purchase, NY.

RUN

GUESS-IT
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS-TYPE YES OR NO
? YES

THE OBJECT OF THIS GAME IS TO GUESS AN UNKNOWN NUMBER CALLED THE 'DOWN NUMBER'. THE GAME IS PLAYED WITH THE NUMBERS 1 TO 11. YOU WILL BE GIVEN A HAND OF 5 RANDOMLY SELECTED NUMBERS BETWEEN 1 AND 11. THE COMPUTER WILL HAVE A SIMILAR HAND. THE DOWN NUMBER WILL ALWAYS BE THE NUMBER NOT IN EITHER PLAYER HANDS.

YOU ALTERNATE MOVES WITH THE COMPUTER. ON ANY MOVE THERE ARE TWO OPTIONS- GUESS THE DOWN NUMBER OR ASK ABOUT SOME NUMBER.

WHEN A PLAYER GUESSES THE DOWN NUMBER THE GAME STOPS. IF THE GUESS IS CORRECT THAT PLAYER WINS. IF THE GUESS IS NOT CORRECT THAT PLAYER LOSES.

ALL QUESTIONS ABOUT NUMBERS IN THE OTHER PLAYERS HAND MUST BE ANSWERED TRUTHFULLY. A PLAYER MAY 'BLUFF' BY ASKING ABOUT A NUMBER IN HIS OWN HAND. THE COMPUTER WILL SOMETIMES DO THIS.

A NUMBER MAY BE ASKED ABOUT ONLY ONCE.

GOOD LUCK

ICBM

Your radar station picks up an enemy ICBM heading your way, telling you its coordinates (in miles north and miles east of your location). You launch a surface-to-air missile (SAM) to intercept it.

Your only control over the SAM is that you can aim it in any direction, both at launch, and in mid-air. Using the coordinates of the ICBM as a guide, you INPUT the direction (measured CCW from North) in which you want the SAM to travel.

At the next radar scan one minute later, you are given the new coordinates of the ICBM, the coordinates of your SAM, and the distance between the two. You can now make corrections in the course of your SAM by entering a new direction.

You have no control over the altitude of your SAM, as it is assumed that it will seek the same altitude as the ICBM.

As the two missiles draw closer, you make adjustments in the direction of the SAM so as to intercept the ICBM. It's not easy to hit, because the ICBM is programmed to make evasive maneuvers, by taking random deviations from the straight line course to your location. Also, its speed is not known, although it does not vary after being randomly selected at the start of the run.

You can destroy the ICBM by coming within 5 miles of it, at which time your SAM's heat-seeking sensors will come into action and direct it to its target. If you overshoot

the ICBM it's possible to turn the SAM around and chase the ICBM back towards your location. But be careful; you may get both missiles in your lap.

There is also some element of chance involved, as several accidents have been programmed to occur randomly. These can work for you or against you.

Some ways to improve and expand the program are:

1. Operator control over SAM speed: In the present version the speed of the SAM is randomly selected by the computer at the start of the run, and remains constant thereafter. This often results in overshooting the ICBM. Modify the program so that you can input a new speed (within limits) at the same time you input the new direction.

2. Three dimensional version: Have the computer print the *altitude* of the ICBM, as well as its coordinates. The operator will then have to INPUT the angle his SAM is to make with the horizontal, when entering the other quantities.

3. Extend to all Quadrants. In the present version, the ICBM approaches only from the Northeast. You can expand this to include approach from any compass direction.

This game is derived from a program submitted by Chris Falco. The writeup is by Paul Calter and originally appeared in *Creative Computing*, May/June 1975.

Inkblot

INKBLOT is a program that creates "inkblots" similar to those used in the famous Rorschach Inkblot Test. The program generates these inkblots randomly so that literally millions of different patterns can be produced. Many of these patterns are quite interesting and serve not only as conversation pieces, but also as good examples of computer "art."

In addition, INKBLOT is interesting from a mathematical point of view. This is because INKBLOT actually creates inkblots by plotting ellipses on the left side of the page and their mirror-images on the right side. The program first chooses the ellipses to be plotted by randomly selecting the values a, b, j, k and θ in the equation for a rotated ellipse:

$$\frac{[(x-j)\cos\theta + (y-k)\sin\theta]^2}{a^2} + \frac{[(y-k)\cos\theta - (x-j)\sin\theta]^2}{b^2} = 1$$

where a = the horizontal radius of the ellipse
 b = the vertical radius of the ellipse
 j = the distance from the ellipse center to the y-axis
 k = the distance from the ellipse center to the x-axis
 θ = the angle of rotation in radians

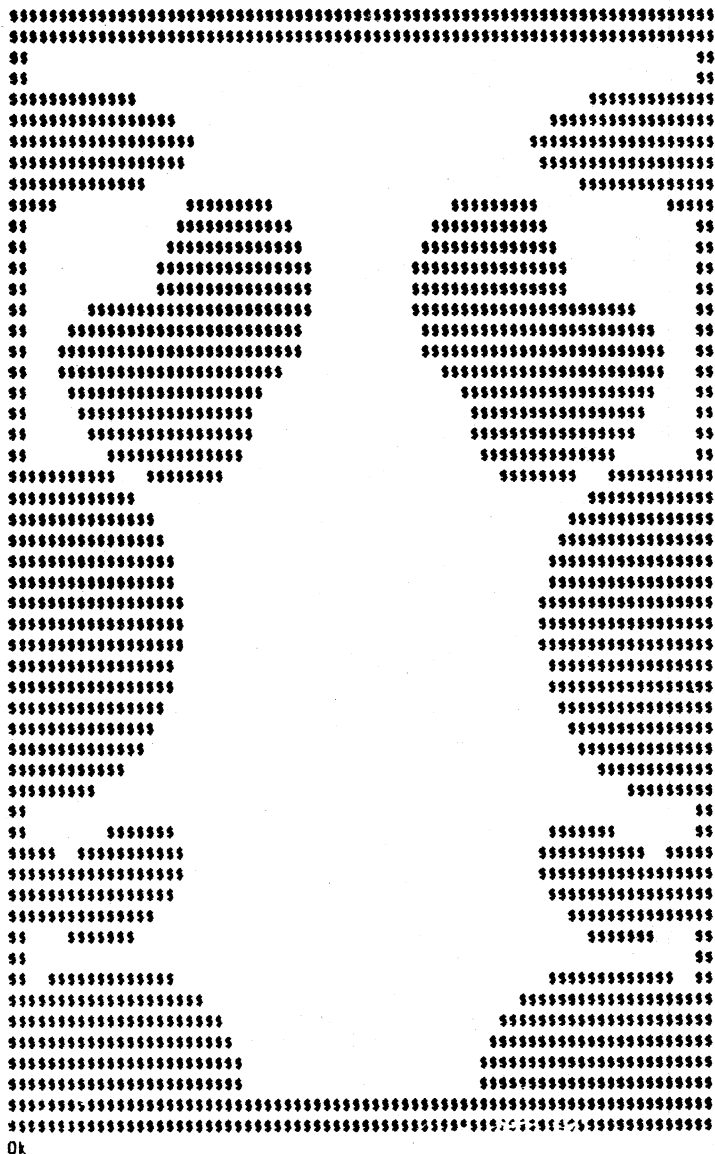

Since the actual method by which the program plots the ellipses is quite complicated, it won't be discussed here.

INKBLOT could be enhanced in several ways, for example allowing the user to specify which character is to be used in printing the inkblot. It could have an option to print the "negative" of an inkblot by filling in the area around the ellipses rather than the ellipses themselves. Finally, it is possible to build in a "repeatable randomness" feature so that exceptional outputs could be reproduced at any time. These enhancements are left for the ambitious programmer to make.

Program and description are by Scott Costello.

Joust

In this program you are a medieval knight in a jousting tournament. The prize to the winner of the tournament is the princess' hand in marriage. To win you must beat four other knights, the gold knight, the silver knight, the red knight, and the fierce black knight. On each pass of your opponent you must select one of eight different aiming points, such as the helm, lower left, face of shield, et cetera, and, based on your aiming point, you may select from three to six different defense positions such as a right lean or shield low.

As you proceed in the jousting tournament there are different intermediate outcomes such as getting knocked on the shield, breaking a spear, and so on. There are also some outcomes which end the contest such as your getting killed, or getting knocked from your horse.

This program was conceived and written by Alan Yarbrough.

```

JOUST
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

WHAT IS YOUR NAME, PLEASE? STEVE
SIR STEVE, YOU ARE A MEDIEVAL KNIGHT IN A JOUSTING TOURNAMENT.
THE PRIZE TO THE WINNER IS THE PRINCESS' HAND IN MARRIAGE.
TO WIN, YOU MUST BEAT FOUR OTHER KNIGHTS.
TO JOUST, YOU PICK AN AIMING POINT FOR THE LANCE,
AND THEN ONE OF FROM 3 TO 6 DIFFERENT POSSIBLE DEFENSE POSITIONS.
THE AIMING POINTS ARE:

- 1- HELM
- 2- UPPER LEFT (OF SHIELD)
- 3- UPPER MIDDLE
- 4- UPPER RIGHT
- 5- LOWER LEFT
- 6- LOWER MIDDLE
- 7- LOWER RIGHT
- 8- BASE OF SHIELD

IF YOU BREAK A LANCE OR LOSE A HELM, YOU WILL BE GIVEN ANOTHER.
GOOD LUCK, SIR!

THIS IS YOUR FIRST JOUST. YOU ARE UP AGAINST THE GOLD KNIGHT.
YOUR AIMING POINT(1-8)? 4
YOU MAY USE ONE OF THESE DEFENSES:
2-RIGHT LEAN, 4-STEADY SEAT, 5-SHIELD HIGH, 6-SHIELD LOW.

WHAT IS YOUR CHOICE? 2
HE MISSED YOU!
YOU UNSEATED HIM (LOUD CHEERS AND HUZZAHS!!)
YOU HAVE WON THIS JOUST.

THIS IS YOUR SECOND JOUST. YOUR OPPONENT IS THE SILVER KNIGHT.
YOUR AIMING POINT(1-8)? 5
YOU MAY USE ONE OF THESE DEFENSES:
4-STEADY SEAT, 5-SHIELD HIGH, 6-SHIELD LOW.
WHAT IS YOUR CHOICE? 4
HE BROKE HIS LANCE.
YOU BROKE YOUR LANCE(CRACK...)

YOU ARE NOW READY TO TRY AGAIN.
YOUR AIMING POINT(1-8)? 2
YOU MAY USE ONE OF THESE DEFENSES:
3-LEFT LEAN, 4-STEADY SEAT, 5-SHIELD HIGH, 6-SHIELD LOW.

WHAT IS YOUR CHOICE? 3
HE BROKE HIS LANCE.
YOU MISSED HIM (HISS!)
YOU ARE NOW READY TO TRY AGAIN.
YOUR AIMING POINT(1-8)? 3
YOU MAY USE ONE OF THESE DEFENSES:
1-LOWER HELM, 2-RIGHT LEAN, 3-LEFT LEAN, 4-STEADY SEAT,
5-SHIELD HIGH, 6-SHIELD LOW.

WHAT IS YOUR CHOICE? 4
HE KNOCKED OFF YOUR HELM!
YOU BROKE YOUR LANCE(CRACK...)
YOU ARE NOW READY TO TRY AGAIN.
YOUR AIMING POINT(1-8)? 3
YOU MAY USE ONE OF THESE DEFENSES:
1-LOWER HELM, 2-RIGHT LEAN, 3-LEFT LEAN, 4-STEADY SEAT,
5-SHIELD HIGH, 6-SHIELD LOW.

WHAT IS YOUR CHOICE? 4
HE HIT YOUR SHIELD BUT IT GLANCED OFF.
YOU BROKE YOUR LANCE BUT UNSEATED YOUR OPPONENT.
YOU HAVE WON THIS JOUST.

YOU ARE DOING WELL! YOUR THIRD JOUST IS AGAINST THE RED KNIGHT.
YOUR AIMING POINT(1-8)? 8
YOU MAY USE ONE OF THESE DEFENSES:
1-LOWER HELM, 4-STEADY SEAT, 5-SHIELD HIGH, 6-SHIELD LOW.
WHAT IS YOUR CHOICE? 1
HE HAS UNSEATED YOU(THUD!)
YOU BROKE YOUR LANCE(CRACK...)
TOO BAD, YOU LOST. HOPE YOUR INSURANCE WAS PAID UP.
SORRY, BETTER LUCK NEXT JOUST.
OK

Jumping Balls

Jumping balls is a solitaire board game played with a board having nine holes in a line that can be filled with four white balls to the right end and four black balls to the left end. Without a board, it can be played with coins or chips. The object of the game is to reverse the position of the balls (or other objects) from one end of the board to the other.

You may make a move by moving a ball to the immediately adjacent empty hole or by jumping one other ball. You may not jump two or more balls. Holes are numbered from left to right. At the beginning of the game, hole number five is free. Consequently, a legitimate first move would be six to five, four to

five, three to five, which would be a jump, or seven to five, another jump.

The computer does not rank your playing ability but, as a hint, you ought to be able to complete the game in fewer moves than are shown in our sample run.

The original author of this game was Anthony Rizzolo.

Keno

KENO
CREATIVE COMPUTING, MORRISTOWN, NEW JERSEY

Keno is strictly an American invention that originated in the casinos in Nevada, perhaps in Reno. During the game, twenty numbers from one to eighty are selected at random. Prior to each game at the casino, the player may choose from one to fifteen numbers, or "spots" he thinks will be selected during the game. The player enters, or "marks," the desired spots and places a bet. At the end of each game, the spots marked by the player are compared with the twenty numbers and the payoff is computed accordingly. Keno seems to have a high attraction in Las Vegas because the betting is very simple and the maximum payoff is very high (\$25,000). Nevertheless, the probability of winning is extremely low; indeed, Keno returns more to the house than virtually any other game.

In this particular computersized version of Keno, there is only one player and he has the option only of betting eight different spots. In Nevada the normal bet is in multiples of 60¢; however, in this game the bet will be \$1.20 with no multiples possible. The payoff with eight spots marked is as follows:

Spots	Payoff
5	\$10.00
6	\$100.00
7	\$2,200.00
8	\$25,000.00

There is no payoff for zero, one, two, three, or four correct.

This version of Keno was originally written by Vincent Fazio.

KENO IS PLAYED IN MANY CASINOS IN LAS VEGAS. PLAY KENO BY COMPUTER. ONE VARIATION OF THE GAME, UTILIZES THE RANDOM NUMBER GENERATOR.

THE PLAYER CHOOSES 8 DIFFERENT NUMBERS FROM 1 TO 80 INCLUSIVE, AND BETS \$1.20. THE COMPUTER WILL SELECT 20 NUMBERS AT RANDOM AND WILL ELIMINATE DUPLICATES WHICH MAY OCCUR. ANOTHER NUMBER WILL BE INSERTED IN ITS PLACE SO THAT THE COMPUTER WILL OUTPUT 20 DIFFERENT NUMBERS.

HERE WE GO!!!
THE COMPUTER WILL OUTPUT A ? MARK. TYPE A NUMBER FROM 1 TO 80, INCLUSIVE, AND PRESS THE RETURN KEY. REPEAT THIS PROCESS UNTIL THE ? MARK IS NO LONGER SHOWN.

L Game

The L-game is a 2-player strategic game played on a 4x4 grid. It was originally devised by Edward de Bono and appeared in the book, "The Five-Day Course in Thinking." In the game, each player has one 'L' which covers four squares (3 high x 2 across). The two L's are labelled differently to avoid confusion. There are also two neutral 'boxes' each the size of a single square on the grid. To play the game with the computer the grid positions must be numbered as follows:

1	2	3	4
5	6	7	8
9	10	11	12
13	14	15	16

Play always begins with all the pieces on the board in this position:

			4
5			8
9			12
13			

The object of the game is simply to position one's L and the neutral boxes to pin the other player's L. Each move is a mixture of offense and defense, for one is not only trying to pin the other player's L, but also trying to prevent his own L from being pinned.

Either player may move first. To move, one must pick up his L and move it to a different position on the board. The player may flip his L over, rotate it 90 degrees, etc. The L must not cover any other pieces or hang off the edge of the board. If a player is unable to move his L, or simply cannot find a move, he loses the game. Once the player has successfully moved his L to a new position on the board, he then has the option of moving the neutral boxes. He may move the boxes only to unoccupied positions and he has the option of moving one box, both boxes, or leaving the boxes where they are. By using the boxes effectively, one can block off moves for the other player's L and possibly pin him. After the player moves the boxes (or decides not to move one or both) it is the other player's turn and play continues in the same manner.

The computer version of the L Game was written by Bill Gardner.

RUN

L-GAME
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

INSTRUCTIONS? YES

L-game is a simple strategic game played on a 4x4 grid by two opposing players, in this case between you and the computer. The grid is numbered as follows:

```

=====
: 1:: 2:: 3:: 4:
=====
: 5:: 6:: 7:: 8:
=====
: 9::10::11::12:
=====
:13::14::15::16:
=====

```

The game is played with four pieces; both you and the computer have one 'L', and there are two 'BOXES' which are used by both players. Play always begins with the pieces on the board in the following position:

```

*****
* *///////: 4:
*****
=====
: 5:////0000: 8:
=====
: 9:////0000:12:
=====
=====00000000****
:13:00000000* *
=====00000000***

```

(computer is /, you are 0)

The object of the game is to position your own L and the boxes to prevent the computer from moving its L. Of course, it is trying to do the same to you! To move, you must simply enter the four coordinates where you want to place your L. It must remain on the board and must not cover any other pieces. You must move your L! If you cannot find a new position for your L, then the computer has effectively pinned your L and it wins the game.

Assuming you have successfully moved your L, you now have the option of moving the boxes. You may move one, two, or none of the boxes by simply entering the coordinates where you want to put them. To leave a box where it is, enter its present position.

After you move the boxes, it is up to the computer to find a move for its L and play continues in the same manner. Remember that you must not only try to pin the computer's L but also keep your own L from being pinned. Also, it is easier to play the game with your own board than the computer printout. To resign, enter 0,0,0,0 in place of your move. GOOD LUCK!

Life Expectancy

This program is a life-expectancy test derived from Peter Passell's book "How To." The test asks you a series of questions dealing with your life-style and environment. At the end of the questioning, the program gives your estimated life-expectancy and the percentage of the population you should outlive.

You may wish to experiment with certain variables to see what effect they will have on your lifespan. It's unlikely that you want to change your sex, but you may wish to check out the effect of smoking, drinking, mental attitude or weight.

This program was written by John E. Rogers.

RUN

LIFE EXPECTANCY
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS IS A LIFE EXPECTANCY TEST.
DO YOU WISH INSTRUCTIONS? YES

THIS IS A TEST TO PREDICT YOUR LIFE EXPECTANCY. I
WILL ASK YOU A SERIES OF SHORT QUESTIONS, WHICH YOU WILL
REPLY BY TYPING IN THE CORRESPONDING ANSWER TO THE
QUESTION.

EXAMPLE: WHAT IS YOUR SEX?

M=MALE
F=FEMALE

'M' AND 'F' ARE THE POSSIBLE REPLIES TO THE QUESTION, ANSWER
LIKE THIS:

CHOOSE ONE OF THE LETTERS ABOVE? M

TYPING AN 'M' SIGNIFIES YOU ARE A MALE.

+++SEX+++

ARE YOU MALE OR FEMALE?

M= MALE.

F= FEMALE.

CHOOSE ONE OF THE LETTERS ABOVE? M

+++LIFE STYLE+++

WHERE DO YOU LIVE?

G= IF YOU LIVE IN AN URBAN AREA WITH A POPULATION OVER 2 MIL.

K= IF YOU LIVE IN A TOWN UNDER 10,000, OR ON A FARM.

I= NEITHER.

CHOOSE ONE OF THE LETTERS ABOVE? I

HOW DO YOU WORK?

H= IF YOU WORK BEHIND A DESK.

L= IF YOUR WORK REQUIRES HEAVY PHYSICAL LABOR.

I= NONE OF THE ABOVE.

CHOOSE ONE OF THE LETTERS ABOVE? I

HOW LONG DO YOU EXERCISE STRENUOUSLY,
(TENNIS, RUNNING, SWIMMING, ETC.)?

F= FIVE TIMES A WEEK FOR AT LEAST A HALF HOUR.

K= JUST TWO OR THREE TIMES A WEEK.

I= DO NOT EXERCISE IN THIS FASHION.

CHOOSE ONE OF THE LETTERS ABOVE? K

WHO DO YOU LIVE WITH?

N= IF YOU LIVE WITH A SPOUSE, FRIEND, OR IN A FAMILY.

H= IF YOU'VE LIVED ALONE FOR 1-10 YEARS SINCE AGE 25.

G= FOR 11-20 YEARS.

M= FOR 21-30 YEARS.

E= FOR 31-40 YEARS.

M= MORE THAN 40 YEARS.

CHOOSE ONE OF THE LETTERS ABOVE? N

+++PSYCHE+++

DO YOU SLEEP MORE THAN 10 HOURS A NIGHT?

I= NO.

E=YES.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++MENTAL STATE+++

M= IF YOU ARE INTENSE, AGGRESSIVE, OR EASILY ANGERED.

L= IF YOU ARE EASY GOING, RELAXED, OR A FOLLOWER.

I= NEITHER.

CHOOSE ONE OF THE LETTERS ABOVE? L

+++HOW YOU FEEL+++

ARE YOU HAPPY OR UNHAPPY?

J= HAPPY.

G= UNHAPPY.

I= NEITHER.

CHOOSE ONE OF THE LETTERS ABOVE? J

+++FACTORS+++

HAVE YOU HAD A SPEEDING TICKET IN THE LAST YEAR?

H= YES.

I=NO.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++INCOME+++

DO YOU EARN MORE THAN \$50,000 A YEAR?

G= YES.

I=NO.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++SCHOOLING+++

J= IF YOU HAVE FINISHED COLLEGE.

L= IF YOU HAVE FINISHED COLLEGE WITH A GRADUATE
OR PROFESSIONAL DEGREE.

I= NOTHING LISTED.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++AGE+++

ARE YOU 65 OR OLDER AND STILL WORKING?

L= YES.

I= NO.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++HEREDITY+++

K= IF ANY GRANDPARENTS LIVED TO 85 YEARS OLD.

O= IF ALL FOUR GRANDPARENTS LIVED TO 80 YEARS OLD.

I= NO GRANDPARENTS QUALIFY IN THE ABOVE.

CHOOSE ONE OF THE LETTERS ABOVE? I

HAS ANY PARENT DIED OF A STROKE OR HEART ATTACK
BEFORE THE AGE OF 50?

E= YES.

I= NO.

CHOOSE ONE OF THE LETTERS ABOVE? E

+++FAMILY DISEASES+++

ANY PARENT, BROTHER, OR SISTER UNDER 50 HAS (OR HAD)
CANCER, A HEART CONDITION, OR DIABETES SINCE CHILDHOOD?

M= YES.

I= NO.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++HEALTH+++

HOW MUCH DO YOU SMOKE?

A= IF YOU SMOKE MORE THAN TWO PACKS A DAY.

C= ONE TO TWO PACKS A DAY.

M= ONE HALF TO ONE PACK A DAY.

I= DON'T SMOKE.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++DRINK+++

DO YOU DRINK THE EQUIVALENT OF A
QUARTER BOTTLE OF ALCOHOLIC BEVERAGE A DAY?

H= YES.

I= NO.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++WEIGHT+++

A= IF YOU ARE OVERWEIGHT BY 50 POUNDS OR MORE.

E= OVER BY 30-50 POUNDS.

G= OVER BY 10-30 POUNDS.

I= NOT OVER WEIGHT.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++CHECKUPS+++

DO YOU? IF YOU ARE A MALE OVER 40 HAVE AN ANNUAL CHECKUP?

K= YES.

I= IF NO OR NOT A MALE OR UNDER 40 YEARS OLD.

CHOOSE ONE OF THE LETTERS ABOVE? I

DO YOU? IF YOU ARE A WOMAN SEE A GYNECOLOGIST ONCE A YEAR?

K= YES.

I= IF NO OR NOT A WOMAN.

CHOOSE ONE OF THE LETTERS ABOVE? I

+++CURRENT AGE+++

K= IF YOU ARE BETWEEN 30 AND 40 YEARS OLD.

L= BETWEEN 40 AND 50.

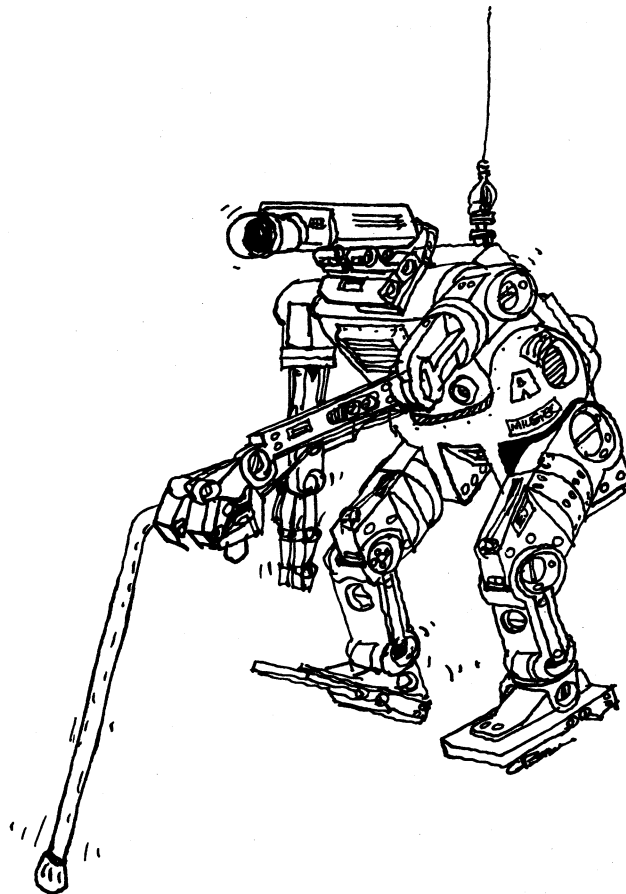

F= BETWEEN 50 AND 70.

N= OVER 70.

I= UNDER 30.

CHOOSE ONE OF THE LETTERS ABOVE? I

YOU ARE EXPECTED TO LIVE TO THE AGE OF 76 YEARS
OUT LIVING 61% OF THE MEN AND 39% OF THE WOMEN.
OK

Lissajous

This program prints Lissajous patterns. You enter relative X and Y frequencies and the Y phase of π . The relative frequencies for X and Y must be a positive number one or greater. The phase may be between zero and any number you want.

We have experimented with a wide range of relative frequencies and phases and come up with some startlingly beautiful patterns. Some are starkly plain while others are amazingly complex. If the frequencies go much beyond nine or ten, the patterns generally become jumbled and difficult to decipher particularly if they are being printed out on the normal hard copy terminal.

This program was originally written by Larry Ruane and modified by several other people along the line. It appeared first in *Creative Computing*, Sep/Oct 1977.

Magic Square

We've all seen examples of magic squares. The most common one is a 3x3 square using the integers 1 through 9 in which the sum of each row, column and diagonal totals 15.

In the computer game of "Magic Square" the goal is to form a sum 15 magic square with you and the computer alternately filling in the integers between 1 and 9. If one player stumbles and puts a number in which causes the sum of a row, column, or diagonal to be something other than 15, he loses.

In forming a sum 15 magic square, there is only one fundamental solution. However, it can be rotated and reversed to form 8 solutions. Because the computer does not play a particularly creative game, all eight solutions cannot be obtained. How many can be?

Can you modify the computer program to play a more interesting game which permits all eight solutions? (Hint: Try randomizing the move position and number generators in Statements 400 and 410.)

This program was created by David Ahl and originally appeared in *Creative Computing*, Jan/Feb 1975.

RUN

MAGIC SQUARE
CREATIVE COMPUTING MORRISTOWN NEW JERSEY

GAME OF MAGIC SQUARE

PLAYERS ALTERNATELY CHOOSE AN INTEGER (1 TO 9) THAT HAS NOT BEEN PREVIOUSLY USED AND PLACE IT IN ANY UNFILLED CELL OF A TIC-TAC-TOE BOARD. THE GOAL IS TO MAKE THE SUM OF EACH ROW, COLUMN, AND DIAGONAL EQUAL TO 15.

THAT PLAYER LOSES WHO FIRST MAKES THE SUM OF THE THREE FIGURES IN ANY ROW, COLUMN, OR DIAGONAL SOMETHING OTHER THAN 15.

A TIE GAME DRAWS A MAGIC SQUARE!!

THE COMPUTER WILL ASK YOU ON EACH MOVE WHICH CELL YOU WISH TO OCCUPY, AND THE NUMBER YOU WISH LIKE '3,7' IF YOU WISHED TO PUT A 7 IN CELL 3.

HERE ARE THE CELL NUMBERS:

```
1 2 3
4 5 6
7 8 9
```

INPUT YOUR MOVE --- CELL AND NUMBER? 1,1

```
1      0      0
0      0      0
0      0      0
```

I MOVE TO CELL 2 WITH A 2

```
1      2      0
0      0      0
0      0      0
```

INPUT YOUR MOVE --- CELL AND NUMBER? 5,9

```
1      2      0
0      9      0
0      0      0
```

I MOVE TO CELL 4 WITH A 3

```
1      2      0
3      9      0
0      0      0
```

Man-Eating Rabbit

In this game you are in a pit with a man-eating rabbit. The center of the pit, appropriately enough, is at 0,0, and it has a radius of ten. On each move, you can move in any one of eight different angles, 0, 45, 90, 135 ... etc. Unlike you, the rabbit can take more than one hop on a move. The object of the game is to avoid the rabbit for ten moves. If you do this successfully you'll be released and set free.

We're not sure what race of people on what planet dreamed up this diabolical sport, but we've found that it's extremely difficult to get away from the rabbit in more than about one out of ten games. You may, therefore, want to improve the odds somewhat by limiting the number of moves the rabbit can make on each turn to one or two. You'll find it interesting to graph the results of the program as you go along. To do this, you'll need a piece of quadrille paper at least 21 squares in each direction. Draw a circle with your compass ten units in diameter and then number the grid from minus ten to plus ten along the X and Y axes. Plot your moves as you go along and you'll see some interesting patterns develop.

This program was conceived and written by Philip Stanway.

Maneuvers

In this game you are maneuvering in a corner of space shaped, interestingly enough, like a cube. The dimensions of the cube are ten parsecs on a side. The bases are at the corners as shown on the diagram with the sample run. There are four star bases located at corners of the cube which you must visit in order, A, B, C, and D, to deliver a message to them. While it is a fairly simple matter to get to Base A, the other bases sometimes prove somewhat elusive. One possibility would be to use a second computer to compute your course, or even compute the course before you start the game and then feed it in. Would this be cheating? I don't think so because the learning value in writing a program to compute your course will teach you more about the game than probably fifty plays of it. On the other hand, which is more fun? That's for you to find out.

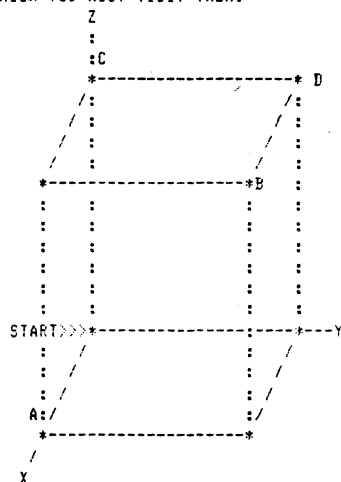

This program was written by John C. Russ.

RUN

MANUEVERS
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU NEED INSTRUCTIONS? YES

YOU ARE THE PILOT OF THE ENTERPRISE'S SPACE SHUTTLE. YOU MUST DELIVER A MESSAGE TO EACH OF FOUR STARBASES, IN THE LEAST TOTAL TIME. YOUR INITIAL POSITION IS AT ONE CORNER OF A CUBE, TEN PARSECS ON A SIDE. THE BASES ARE AT THE CORNERS SHOWN BELOW, MARKED A, B, C, AND D IN THE ORDER IN WHICH YOU MUST VISIT THEM.

FOR YOUR SUBSPACE RADIO TO DELIVER THE MESSAGE, YOU MUST PASS WITHIN ONE PARSEC OF EACH STARBASE. YOUR PROPULSION SYSTEM IS ALWAYS ON, GIVING YOU A CONSTANT ACCELERATION OF 0.2 PARSECS PER STARDATE PER STARDATE. YOU CAN ONLY CONTROL THE ORIENTATION OF YOUR SHIP, TO DIRECT YOUR THRUST AND ACCELERATION. YOU SPECIFY YOUR SHIP'S ATTITUDE BY THE ANGLE THETA (THE CLOCKWISE ANGLE IN THE X-Y PLANE STARTING AT THE X-AXIS) AND THE ANGLE PSI (THE ANGLE OF INCLINATION ABOVE THE X-Y PLANE). YOU INPUT NEW ANGLES EACH STARDATE.

Mastermind®

The original invention of Mastermind is credited to an amateur mathematician, Mordechai Meirovich, who first displayed it at the 1971 Nuremberg Toy Fair.* Rights to the game were bought by Invicta who had moderate success with the game for 2½ years until the Christmas season of 1975 when it was the most popular packaged game. Sales surpassed even the old standby, Monopoly.

In its most basic form, Mastermind consists of a plastic game board, a dozen or so pegs which can be grouped into six basic colors, and two groups of black and white key pegs (sometimes called "inference pegs".) The game board resembles the figure below.

The game is played by two people, whom we shall designate as the "active" player and the "passive" player. The first step before play actually commences is to have the passive player (in our case, the computer) choose a total of four colored pegs at random from any of the six basic color groups (duplicate colors allowed, of course.) He then conceals these colors from the active player by placing the four pegs in the "hidden code" portion of the game board. It is now up to the active player to determine, in ten moves or less, the exact color and location of each of the four pegs comprising the hidden code.

To aid the active player in determining the hidden code, the passive player must award the active player a number of key pegs (inference pegs) after each guess, according to the following scheme: for *each* peg in the active player's current guess which corresponds exactly (in color *and* posi-

tion) to a peg in the hidden code, the passive person places one *black* peg in the key-peg square adjacent to the passive player's current guess frame. Placing of the key pegs within the square is arbitrary since the relative position of the key peg carries no meaning. Clearly, when four black pegs are obtained, the hidden code is broken.

Secondly, the passive player must place one *white* key peg in the current key-peg square for *each* peg in the active player's current guess which matches (in color, but *not* position) a peg in the hidden code. Keep in mind that once a color peg in the player's current guess has been awarded a key peg, its function in determining the remaining number of key pegs to award for the current guess is finished. For example, suppose the hidden code were:

R B Y G

corresponding to red, blue, yellow, green, and the active player's current guess were:

G B B P

corresponding to green, blue, blue and purple.

The passive player should subsequently award one black and one white key peg for the following reasons: the blue color peg in position 2 of the current guess matches exactly in color and position with the hidden code. Secondly, the green color peg in position 1 of the current guess matches the color of the peg in position 4 of the hidden code. But since the *location* of the green peg is not exact, only a white peg is awarded. The blue and purple pegs in positions 3 and 4, respectively, of the current guess do not match either the color or position of the remaining pegs in the hidden code (positions 1 and 3) and hence, no other key pegs are awarded.

The game proceeds in this manner until the hidden code is broken or all ten frames have been filled. As noted earlier, the computer will play the passive player in our computer version, generating a hidden code and awarding the black and white key pegs after each guess.

The program offers the user two options, QUIT and BOARD, which may be entered at any time *after* the first move. QUIT instructs the program that you are fed up with playing Mastermind for the time being and wish to terminate the session. BOARD instructs the program to print out a summary of the moves prior to the time that the BOARD command was issued, including the guesses and key pegs awarded for each frame. Some players find that an arrangement of frames such as that provided by BOARD is easier to visualize and subsequently analyze. Beginners will find it most useful.

The program and this description were written by David G. Struble of the University of Dayton. It first appeared in *Creative Computing*, Mar/Apr 1976.

*Ed. Note—

To anyone familiar with children's games, it is obvious that Mastermind is simply a commercial adaptation (using colors rather than numbers) of the game Bulls and Cows. This game, much more popular in England than the U.S. is not, to my knowledge, commercially packaged. —DHA

Masterbagels

This is a fascinating, general-purpose, deductive logic game. It rolls Bagels, Mastermind, bulls and cows, et cetera, into one general deductive logic game. If you want to play Bagels, set the inputs to N,3,9 (N is the number of games you wish to play). If you want to play mastermind, set the inputs to N,4,6. Of course, many of the games that it plays are entirely new altogether such as N,7,4 or N,5,5.

To make it into a really general-purpose game, you might want to put in a modification in the digit selection routine (statements 300-320) with a

parameter that either allows or disallows duplicate digits. As it is right now, the game does allow duplicate digits so that, for example, it could select a three digit number such as 223 or even 444. Another change you might want to add is in statement 750; it sets the maximum allowable trials for getting the answer. You may find that it is not giving you enough tries and you might want to increase the value of I.

Masterbagels was created by H.R. Hamilton and originally appeared in *Creative Computing*, Jan/Feb 1977.

TEACH? YES
HI, THIS IS A LOGIC GAME DESIGNED TO TEST YOUR DEDUCTIVE
ABILITY. I WILL CHOOSE A RANDOM NUMBER AND YOU ISOLATE IT.
WHEN PROMPTED, ENTER A VALID NUMBER, AND I WILL THEN RESPOND
WITH THE # OF DIGITS THAT ARE RIGHT AND IN THE RIGHT POSITION
AND THE # RIGHT BUT IN THE WRONG POSITION. IF I THINK YOU
ARE HOPELESSLY LOST, I WILL TELL YOU THE ANSWER AND WE
WILL GO ON TO THE NEXT NUMBER. TO RECAP YOUR ENTRIES
ENTER A 0, TO QUIT ON A NUMBER ENTER 1, AND TO STOP ENTER 2

```

Matpuzzle

Ready to try something new? A game that isn't like STARTREK or Slot Machine? Then try MATPUZLE and enjoy the art of puzzle-making.

One benefit of puzzles is that they help develop a pattern of logic in one's thinking. In this puzzle you are given a matrix of letters, up to 6 x 6, and a board with dashes and a number above each of the dashes.

The matrix represents the letters of the words you typed in, each having the same length. The number of words and the length of the words are both limited to six, six words each six letters in length, but, both values don't have to be the same. The letters are then put in a matrix and randomly rearranged in lines 160-430.

The dashes on the board form the places for each letter of each word to be written in after it has been deciphered. The number above each dash, determined in lines 500-780, is the sum of the coordinates of where the letter of that dash is located in the matrix. The problem in solving the puzzle is that several coordinates have the same sum.

Since the answers appear above the puzzle itself, rip them off before you give it to a friend to try. They will have a great time trying to figure out your puzzle. Then let them make one for you or set up a relay. The possibilities are almost endless.

The program and description were written by Dave Schroeder.

RUN

MATPUZLE
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS IS A PUZZLE-MAKING GAME.
YOU INPUT UP TO SIX WORDS, UP TO SIX
LETTERS EACH, AND EQUAL IN LENGTH.
THE COMPUTER WILL SCRAMBLE THEM AND
PRINT THEM IN A MATRIX. THE COMPUTER
WILL ALSO PRINT A CORRESPONDING NUMBER
BOARD. WHEN IT STOPS TEAR IT AND GIVE IT
TO A FRIEND.
HOW MANY WORDS DO YOU WANT (UP TO 6)? 6
HOW MANY LETTERS IN EACH WORD (MUST BE SAME)? 6
TYPE ONE 6 LETTER WORD ON EACH LINE
? PARITY
? DUPLES\SLX
? MATRIX
? NUMBER
? LENGTH
? MOTHER

```

----- ( TEAR HERE ) -----
      1  2  3  4  5  6
1  I  A  T  X  L  N
2  E  E  R  M  H  I
3  D  M  P  H  G  T
4  U  L  O  A  R  B
5  X  R  E  E  N  M
6  T  T  U  P  Y  R

      6      3      5      2      7      11
-----
      4      5      10     6      4      5
-----
      6      8      4      9      8      6
-----
      7      9      11     10     8      7
-----
      6      3      10     8      8      7
-----
      5      7      9      7      9      12
-----

```

THE NUMBER ABOVE EACH DASH IS THE SUM OF TWO COORDINATES OF THE POINT ON THE MATRIX WHERE THE CORRECT LETTER FOR THAT SPOT WILL APPEAR. THE PROBLEM IS THAT THE SUM OF SOME COORDINATES ARE THE SAME SO SEVERAL LETTERS COULD FIT. SO TRY NOW TO FIND WHAT WORDS WERE USED AND SOLVE THE PUZZLE -- GOOD LUCK

DO YOU WANT ANOTHER RUN? YES
HOW MANY WORDS DO YOU WANT (UP TO 6)? 4
HOW MANY LETTERS IN EACH WORD (MUST BE SAME)? 5

Maze

This is actually a two part game. In the first part, the program generates a maze which you can then try to find your way through with pencil and paper. Each path of the maze is three characters wide, hence the maximum width that will print on a standard seventy-two column width teletype or other hard copy printer is 24 for the horizontal dimension. A 132-column line printer could handle up to a horizontal dimension of 44. Naturally the vertical dimension can be anything since it's running the length of the paper. However, for really large mazes your computer system will probably be the limiting factor since several matrices are dimensioned with the horizontal and vertical dimensions of the maze.

In the second part of the program a near-sighted mouse is let loose in the maze and explores until he finds his way through. If you want to know what near-sighted means, run the program and ask to see the solution step by step as the mouse goes through the maze. If you elect not to see each step, you'll simply get a total solution for the maze itself.

With or without the mouse, it's a fun program and the larger mazes are frequently a real challenge to solve.

This program was conceived and written by Richard Schaal.

RUN

MAZE
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU NEED INSTRUCTIONS? YES

THIS PROGRAM WILL SIMULATE A NEAR-SIGHTED MOUSE IN A MAZE. YOU SELECT THE DIFFICULTY FACTOR - SIZE! YOU MAY HAVE A MAZE OF ANY SIZE PERMITTED BY THE SIZE OF YOUR SYSTEM. DIMENSIONS LESS THAN 5 ARE TOO TRIVIAL. EACH MAZE IS DIFFERENT, AND HAS ONLY ONE WAY THROUGH IT.

WHAT ARE YOUR DIMENSIONS (HORIZONTAL, VERTICAL)? 10,10

Millionaire

In this game, the computer takes you through your life from birth to death. Along the way, you're asked to make some petty and some other rather crucial decisions. Some of these decisions regard what kind of job you want, how much you bet in Las Vegas, whether you buy a valuable coin, whether you elect to take a vacation or a second job, stock purchases—buying and selling, automobile accidents, tornadoes, and the like.

At the end of your life (it goes by in a flash!) the computer tallies up your gains and your losses and tells you where you stand relative to becoming a millionaire. In ten plays of the game, the most we ever got was \$379,000, somewhat short of being a millionaire, but probably, all things considered, more realistic.

Millionaire was conceived and written by Craig Gunnett, a dreamer to the very end.

RUN

MILLIONAIRE
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS IS THE GAME OF 'MILLIONAIRE'. ALL YOU MUST DO IS TYPE IN YOUR NAME AND ANSWER SOME QUESTIONS. THE DECISIONS YOU MAKE WILL DETERMINE HOW MUCH MONEY YOU MAKE. AT THE TIME OF YOUR DEATH, YOUR LIFE WILL BE RATED BY THE AMOUNT OF MONEY YOU MADE THROUGHOUT YOUR LIFE. IF YOU HAVE MADE \$1,000,000, YOU WILL BE A MILLIONAIRE AND WIN THE GAME. NAME PLEASE? STEVE

O.K., STEVE, THIS IS YOUR NEW LIFE!
IN A SMALL TOWN, ON OCT 28, 1980, STEVE IS BORN.
YOUR PARENTS ARE VERY POOR. ON JUN 12, 1998, YOU LEAVE HOME WITH \$ 410
YOU GOT A NEW JOB AS A FOOTBALL PLAYER. YOU EARN \$ 118031 A YEAR.
YOU ADJUST YOUR EXPENSES TO \$ 110907 A YEAR.

SEP 27, 2001
THE DOCTOR SAYS YOU NEED A VACATION. DO YOU GO? YES

GOOD, THE VACATION COSTS \$ 2671
YOU NOW HAVE \$-2261

MAR 7, 2011
THE INTEREST ON YOUR LOAN IS \$ 1582. YOU HAVE \$-3843
YOU GO TO LAS VEGAS TO GAMBLE. HOW MUCH DO YOU BET? 100

YOU WON \$ 138
YOU NOW HAVE \$-3705
YOUR EARNINGS AND EXPENSES LEAVE YOU WITH \$ 67535

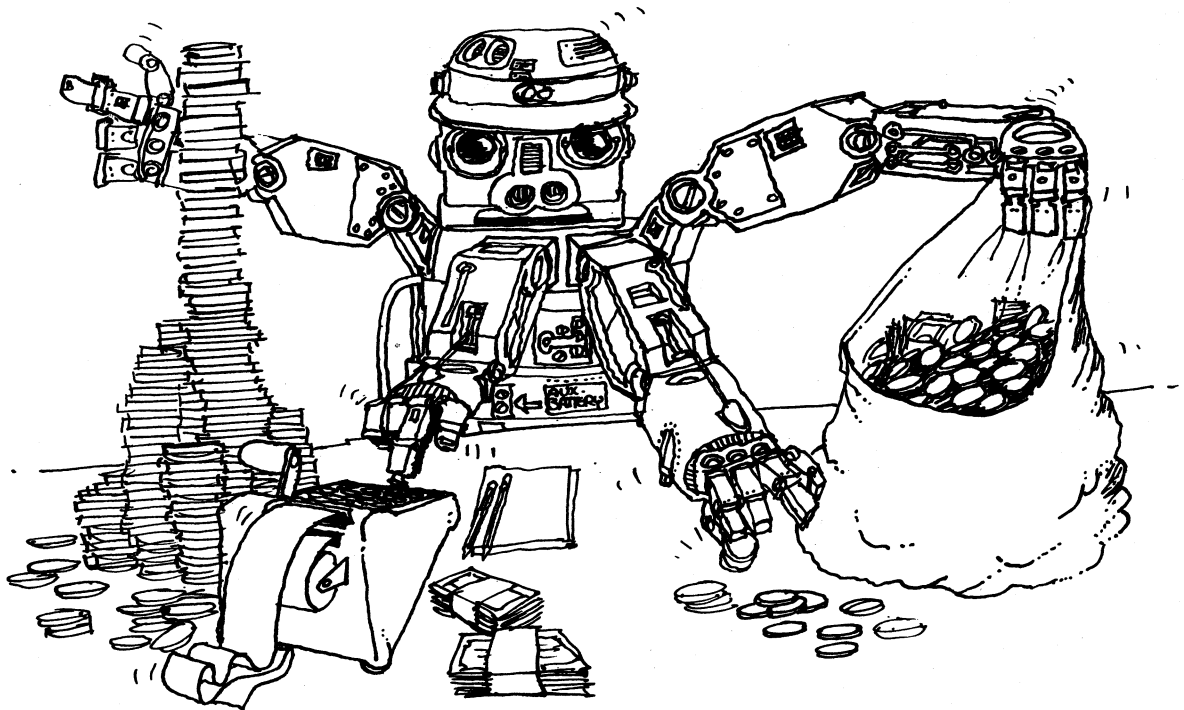

AUG 6, 2016
NEWS FLASH!!! A TORNADO HAS JUST HIT THE HOME OF STEVE
DAMAGES HAVE BEEN ESTIMATED AT \$ 23999
YOU NOW HAVE \$ 43536
YOUR EARNINGS AND EXPENSES LEAVE YOU WITH \$ 79156

SEP 22, 2025
YOUR GRANDFATHER GROVERS JUST DIED. (OH!) HE LEFT YOU \$ 60773, BUT FUNERAL EXPENSES ARE \$ 12587
YOU NOW HAVE \$ 127342
YOUR EARNINGS AND EXPENSES LEAVE YOU WITH \$ 191458

SEP 20, 2033
YOU JUST HAD A CAR ACCIDENT! MEDICAL COSTS ARE \$ 1975. REPAIRS COST \$ 1584
YOU NOW HAVE \$ 187899
YOUR EARNINGS AND EXPENSES LEAVE YOU WITH \$ 244891

MAY 20, 2038
YOUR HOME HAS BEEN ROBBED OF GOODS WORTH \$ 13878
YOU NOW HAVE \$ 231013
YOUR EARNINGS AND EXPENSES LEAVE YOU WITH \$ 266633

MAY 1, 2043
OH! YOU JUST GOT CANCER. MEDICAL BILLS ARE \$ 4638
YOU ARE DEAD (COULDN'T TELL, COULD YOU?) AT THE AGE OF 63.
YOU HAD \$ 261995
NOT BAD, STEVE
THANKS FOR PLAYING 'MILLIONAIRE', STEVE!!!!
OK

```

Minotaur

In this game, you are in a three level cavern. Inside the cavern are ten pillars which stretch through all three levels; they're electrified so that if you touch them you are immediately vaporized. Furthermore, there are trap doors which appear randomly and drop you down one level. The top level is three, the second level down is two, the first or lowest level is one. If a trap door appears in level one you are dropped into a bottomless pit and that ends the game. The minotaur itself also poses a hazard. If you wound him with your spear, he will charge you. Also, he randomly charges for no reason at all. However, he only charges in a straight line. Hint: keep at a slight diagonal from the minotaur until you are ready to throw your spear at him and you have a better chance of avoiding his charges. If you ask for a map, the axes are drawn in with X's. This does not indicate a barrier or fence; you are free to move across the X and Y coordinate planes. However, you are advised not to move out of any of the four edges as this represents yet a different form of bottomless pit and also ends the game. There are many, many additional hazards which are not shown in the sample run. Try it, and be surprised!

This program was conceived and written by Pete Klausler.

RUN

MINOTAUR
CREATIVE COMPUTING, MORRISTOWN, NEW JERSEY

DO YOU WANT TO BE THE MINOTAUR CHAMPION? YES
YOU MUST BEAT A SCORE OF 20.

***** MINOTAUR *****

DO YOU NEED INSTRUCTIONS? YES

THE OBJECT OF THE GAME IS TO KILL THE MINOTAUR

***** CAVERN *****

THE CAVERN OF THE MINOTAUR IS IN THREE
LEVELS. EACH LEVEL IS A COORDINATE PLANE
OUTSIDE OF THE LEVELS THERE IS NOTHING BUT
VACUUM. THE PLANES STRETCH OUT 10 ON EACH AXIS
FROM THE ORIGIN.

***** HAZARDS *****

BARRIERS

INSIDE THE CAVERN ARE 10 ELECTRIFIED
PILLARS STRETCHING THROUGH THE THREE
LEVELS. THEY WILL DESTROY ANYTHING THAT
TOUCHES THEM!!

TRAPDOORS

TRAPDOORS WILL APPEAR OUT OF NOWHERE
AND DROP YOU DOWN ONE LEVEL. IF YOU WERE
ON LEVEL ONE, YOU LOSE!!

CHARGING MINOTAUR

THE MINOTAUR WILL CHARGE IF YOU
WOUND HIM WITH YOUR SPEAR. ALSO, HE
MAY CHARGE FOR NO REASON AT ALL!!!

HERE ARE YOUR CONTROL FUNCTIONS

- 1) MOVING EAST
- 2) MOVING WEST
- 3) MOVING NORTH
- 4) MOVING SOUTH
- 5) MOVING UP A LEVEL
- 6) MOVING DOWN A LEVEL
- 7) THROWING YOUR SPEAR
- 8) GETTING A MAP

***** HAVE FUN *****

```

Motorcycle Jump

This program, originally titled EVILK permits you to act out your fantasies of being a motorcycle daredevil! The game is a simple motorcycle jump over several busses, which takes into account both gravity and drag forces. The ramp angle and motorcycle speed determine the distance jumped. Note that the injury penalty is greater for long jumps than for short ones, and that there is a chance for a crash even on a jump of the right length. This probability, initially set at .20, can be modified in line 560 to make survival more or less likely.

This program was written by Charles Aylworth and originally appeared in *Creative Computing*, Jul/Aug 1978.

RUN

MOTORCYCLE JUMP
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

WE'RE AT THE SCENE OF THE BIG MOTORCYCLE JUMP!
HOW MANY BUSES WILL YOU TRY TO JUMP? 5
5 BUSES! THAT'S 75 FEET!
WHAT RAMP ANGLE WILL YOU USE? 90
90 DEGREES? THAT'S IMPOSSIBLE. COME ON NOW,
WHAT RAMP ANGLE WILL YOU USE? 22
HOW FAST WILL YOU LEAVE THE RAMP? 0
GOOD LUCK!
A PRACTICE JUMP!
OK, THIS TIME HOW FAST WILL YOU LEAVE THE RAMP? 54
GOOD LUCK!
THERE HE GOES!!!!
*****HE JUMPED TOO FAR!
HE MISSED THE RAMP.
I THINK HE'S HURT.....
WELL, KILLER, THE DOCTOR SAYS YOU BROKE YOUR:

Nomad

"Gramma Nomad" is a person who doesn't really know where she wants to live, so she moves to a new house every game. Then she sends you a telegram asking you to visit her. The object of the game is to successfully navigate your way through the streets of Garbonzo City to Gramma's house. See the game for more details. A map of Garbonzo City is provided for your reference.

Nomad was written by Steve Trapp and first appeared in *Creative Computing*, Sep/Oct 1977.

RUN

NOMAD
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

RULES? YES

GRAMMA NOMAD IS A NICE OLD LADY WHO HAS NOT QUITE MADE UP HER MIND WHERE SHE WANTS TO LIVE. SHE HAS NARROWED IT DOWN TO SOMEWHERE IN GARBONZO CITY AND ON A STREET CORNER.

AT THE BEGINNING, THE MAILMAN GIVES YOU A TELEGRAM WRITTEN BY GRAMMA TELLING YOU WHERE SHE LIVES. (I WILL READ IT TO YOU).

YOU GET INTO YOUR CAR IT LRAC MILKNARF HANGREB LODGE. FROM THEEEERE YOU GO TO GRAMMAS HOUSE.

YOU TRY TO GET THERE WITHOUT:
CRASHUPS
TICKETS
FLAT TIRES
RUNNING OUT OF GAS
DEAD ENDS

THERE IS AN 8-MAN POLICE FORCE ENFORCING THE LAWS OF GARBONZO CITY.

THERE ARE 2-DRUNKS ON THE STREETS OF GARBONZO CITY.

IF A POLICEMAN CATCHES A DRUNK, HE HAS TO TESTIFY IN COURT (WHICH TAKES THE REST OF THE GAME)

IF A DRUNK DRIVER HITS YOU, YOU LOSE.

AT EACH JUNCTION, I WILL TELL YOU:
THE DIRECTION YOU ARE GOING
THE ROAD YOU ARE ON
THE ROAD CROSSING

I WILL ASK YOU:
THE WAY YOU WANT TO TURN (IE LEFT)
SPEED (IN MPH)

AN OVERPASS IS NOT A JUNCTION, SO IT IS MERELY SKIPPED OVER. IT IS UNANNOUNCED.

THAT IS ALL

WHAT IS YOUR NAME? STEVE

GOOD LUCK

DEAR STEVE,
HOW ARE YOU? I LIVE AT THE CORNER OF ROAD # 15 & # 9 !!!
COME ON OVER.

LOVE,
GRAMMA
(TELEGRAMMA CORP. TELEGRAM CO.))

GOING SOUTH ON ROAD # 1
JUNCTION: ROAD # 1 & # 2
FORWARD, LEFT, RIGHT OR U-TURN? F
SPEED? 40
SMOOSH...BUS FLATTENED YOUR CAR.

AGAIN? YES

Not One

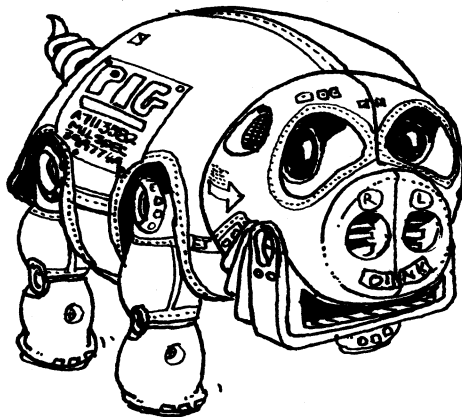

The game, Not One, sometimes known as Pig, is played with two players and a pair of dice. There are ten rounds in the game; one round consisting of one turn for each player. Players add the score that they attain on each round and the player with the highest score after ten rounds is the winner.

On each turn, the player may roll the two dice from one to as many times as he wishes. If the total of the dice on any roll after the first equals the total shown on the first roll, his score is then zero for that entire turn and the dice pass to the other player. On the other hand, if the total on his dice is anything

different from the total on the first turn, he continues to roll and adds the totals of the dice to his score. After each successful roll, the player can decide whether to roll again or stop and score the number of points already obtained.

You'll find that the computer plays a surprisingly good game of Not One. To beat it, you'll need some knowledge of probabilities and a little bit of luck on your side.

Not One was written in response to a challenge that appeared in the charter issue of *Creative Computing*. The game was written by Robert Puopolo and first appeared in *Creative Computing*, Mar/Apr 1975.

MORRISTOWN NEW JERSEY

WOULD YOU LIKE THE INSTRUCTIONS? YES

THE GAME OF NOTONE IS PLAYED WITH TWO PLAYERS AND A PAIR OF DICE. THERE ARE TEN ROUNDS IN THE GAME ONE ROUND CONSISTING OF ONE TURN FOR EACH PLAYER. PLAYERS (YOURSELF AND THE COMPUTER) ADD THE SCORE THEY ATTAIN ON EACH ROUND, AND THE PLAYER WITH THE HIGHEST SCORE AFTER TEN ROUNDS IS THE WINNER

ON EACH TURN THE PLAYER MAY ROLL THE TWO DICE FROM 1 TO N TIMES. IF T1 IS THE TOTAL OF DICE ON THE ITH ROLL, THEN THE PLAYERS SCORE FOR THE TURN IS T(1)+T(2)+T(3)+.....+T(N). HOWEVER, AND HERE'S THE CATCH, IF ANY T(I) IS EQUAL TO T(1) THEN THE TURN IS OVER AND HIS SCORE FOR THAT ROUND IS ZERO AFTER EACH ROLL THAT DOESN'T EQUAL T(1), THE PLAYER CAN DECIDE WHETHER TO ROLL AGAIN OR STOP AND SCORE THE NUMBER OF POINTS ALREADY OBTAINED.

Obstacle

The game OBSTACLE is an obstacle course game played on a 9x40 grid.

A car is represented by the character ‘‘’, the obstacles are the walls (represented by exclamation points and hyphens) and spaces are where the car may travel. The car may not pass over or occupy a wall or obstacle. The character ‘S’ at the upper left corner, indicates where the car starts from, and the character in the lower right corner, the ‘F’, is the space the car must occupy at the finish to win. If the car tries to occupy or pass through a wall the game is lost. When the car lands on the space occupied by the character ‘F’, the car has finished the course, and the game is over, and a time is calculated.

Line-by-line, here's how the program works:

Line 610 dimensions the matrix M for 15 rows by 50 columns (allowing an adequate margin for modification).

Line 620-680 initializes all necessary variables.

Line 700-780, through the use of a random number generator, generates the obstacle course, where I is the row matrix index and J is the column matrix index and R1 is the random number. Line 720 generates a random number between 0 and 1, multiplies it by a density of 1.2 (to increase density factor by a few decimal points) and removes everything right of the decimal point. R1 is now either 0 or 1. If it is 0 the matrix memory location M(I,J) inside the For-Next Loop is assigned the value of a space, if it is 1, it is assigned the value of an exclamation point.

Lines 840 and 850 assign the walls to the course.

Line 890 stores the values of I and J into K and L, these act as value holders. After the print routine has been executed, I and J are reassigned their old values stored in K and L at line 970.

Lines 910-960, through use of a For-Next Loop (as in the initialization course set up routine), print out the characters represented by values in matrix M, Line 930, the CHR\$ Function turns the values of the memory location into their ASCII character equivalent.

Line 990 checks if the car has moved yet, by checking D1. If $D1 > 0$ then it skips the query option and continues with the main body. If $D1 = 0$ then it executes the option query, asking whether a new course, or this course or end the game and then executes the respective option.

Line 1130 checks if D1 is not equal to 1 and if so continues with the move-

ment routine. If not then it starts the car at matrix position 2,2 and continues with the movement routine.

Line 1080 starts the main program body, 1100 queries the direction and 1110 checks the input D if it is a valid direction. Line 1120 inputs the speed 'S' and Line 1130 initializes the counters S1 and D1. Lines 1160-1180 direct control to the proper movement routine (1 is up, 2 is right to left, 3 is down).

Line 1190-1220 is the movement routine for direction 1. Line 1190 erases the car from the previous position keeping track of I and J. Line 1200 and 1210 check each character position between matrix position I,J, and I-S,J for a wall (exclamation or hyphen); if one is encountered the game is over. If no walls are encountered, the move is legal and Line 1220 assigns the car to matrix position I-1,J and jumps to 1310 to check matrix position 10,41 if it contains a car. If so, the game is won and the End of Run routine is executed. If matrix position 10,41 is not occupied the game is not over and control jumps to 870, the matrix print routine. The Loop can only be exited by losing (crashing into an obstacle) or by getting the car to matrix position 10,41 where it executes the End of Run routine.

Line 1380 calculates the time by dividing total number of turns by total number of character spaces covered by the car and multiplies it by 100. Line 1390 prints the time and Line 1400 and 1410 query as to whether to play the game again.

The program and these notes were written by Eric Erickson.

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

2. The second step is to define the requirements. This involves determining what the system is intended to do and what it must be able to handle.

3. The third step is to design the system. This includes creating a detailed plan of how the system will be built and how it will be tested.

4. The fourth step is to implement the system. This involves building the system according to the design and testing it to ensure it meets the requirements.

5. The fifth step is to maintain the system. This involves monitoring the system for problems and making changes as needed to keep it running smoothly.

OCTRIX
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

TEACH GAME(Y OR N)? Y

THIS IS A GAME CALLED OCTRIX. EACH PLAYER IS DEALT 8 CARDS RANGING FROM ACE THROUGH EIGHT. THE CARDS ARE RANKED ACCORDING TO BRIDGE SUITS WITH THE ACE OF CLUBS THE LOWEST AND THE EIGHT OF SPADES HIGHEST. THE OBJECT IS TO WIN AS MANY OF THE EIGHT TRICKS AS POSSIBLE. EACH TRICK PLAYED DETERMINES THE PLAY OF THE NEXT TRICK. IF THE HIGH AND LOW CARDS PLAYED MATCH COLOR THE NEXT TRICK WILL BE HIGH AND IF THEY DO NOT MATCH IT WILL BE LOW. IT IS IMPORTANT TO SET STRATEGY TO WIN CONSECUTIVE TRICKS IN THAT SCORING IS 1 POINT PER TRICK, 4 FOR TWO IN A ROW, 9 FOR 3, UP TO 64 FOR ALL EIGHT.

RESPOND TO THE INPUT PROMPT WITH THE CARD YOU WANT TO PLAY IN A TWO CHARACTER FORMAT WITH THE VALUE(A-8) AS THE FIRST CHARACTER, AND SUIT(C,D,H,S) AS THE SECOND CHARACTER. (TO SEE THE REMAINING CARDS, ENTER A 'P' IN RESPONSE TO THE 'WHAT CARD' QUERY)

THAT'S IT, GOOD LUCK!!

This is a card game for up to four players, or three players plus the computer. A deck of 32 cards is used with ace through eight in each of the four suits. All 32 of the cards are dealt out at the beginning of the game, eight to each player. On each hand, each player discards one card depending on the rules of the game (see the rules at the beginning of the sample game) either the high card discard or the low card discard wins that trick. After eight tricks a new hand is dealt and play proceeds as before. Perhaps the easiest way to learn Octrix is to play a few games with you and the computer or with several people and the computer. Observe what happens and before long you'll be able to work out a reasonable strategy for playing the game.

Octrix was written by Rogers Hamilton.

**PASART
CREATIVE COMPUTING
MORRISTOWN NEW JERSEY**

THIS PROGRAM CREATES ARTIST DESIGNS BASED ON PASCAL'S TRIANGLE.
YOU HAVE 3 BASIC TYPES OF DESIGNS TO SELECT FROM:

1. A SINGLE PASCAL'S TRIANGLE (PLAYED WITH AN ARTISTIC FLARE)
2. TWO 'ARTSY' PASCAL'S TRIANGLES PRINTED BACK TO BACK
3. FOUR 'ARTSY' TRIANGLES IN THE CORNER OF
A SQUARE ARRAY.

WHAT'S YOUR PLEASURE? 1, 2 OR 3? 3
WHICH MULTIPLES DO YOU WANT REPRESENTED WITH BLANKS? 10
HOW MANY ROWS AND COLUMNS IN THE ARRAY (36 IS MAXIMUM)? 36

[illegible]

WHAT'S YOUR PLEASURE? 1, 2 OR 3? 1
WHICH MULTIPLES DO YOU WANT REPRESENTED WITH BLANKS? 10
HOW MANY ROWS AND COLUMNS IN THE ARRAY (36 IS MAXIMUM)? 36

A large, stylized graphic of a star or snowflake composed of many small asterisks, centered on the page. The shape is symmetrical and has multiple points, resembling a complex geometric pattern. It is formed by a dense arrangement of small asterisks, with some areas being more solid and others more sparse, creating a sense of depth and texture. The overall effect is a large, intricate, and eye-catching design that dominates the center of the page.

Pasart 2

This program is a major extension of the original Pasart program. It incorporates many new options including printing a calendar for any year from 1600 to 2300. It allows a user to enter any desired pair of printing characters. The size of the output is expanded to 72 by 72 with an option to expand it further by dividing the final triangle into 72 by 72 chunks that may be taped together. Another option provides the user with the opportunity to create a picture based on four Pascal's tables (option 6).

There wasn't room to show the output from all of these options on these pages. Try them out yourself and we're sure you'll be pleased with the rather spectacular results.

Pasart 2 was also written by Charles H. Lund.

RUN

PASART2
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS PROGRAM CREATES ARTIST DESIGNS BASED ON PASCAL'S TRIANGLE.
DO YOU WANT A LIST OF OPTIONS? YES
PLEASE TEAR OFF THIS LIST AND SAVE OR POST FOR FUTURE REFERENCE

1. A SINGLE PASCALS TRIANGLE PLAYED BACK LIKE THIS:

BEFORE PRINTING	AFTER PRINTING
1 1 1	***
1 2 3	**
1 3 6	**

2. A SINGLE PASCALS TRIANGLE PLAYED BACK LIKE THIS:

BEFORE PRINTING	AFTER PRINTING
1	*
1 1	**
1 2 1	**

3. A SINGLE PASCALS TRIANGLE PLAYED BACK LIKE THIS:

BEFORE PRINTING	AFTER PRINTING
1	*
1 2 1	**
1 3 3 1	***

4. TWO PASCALS TRIANGLES PRINTED BACK TO BACK LIKE THIS:

BEFORE PRINTING	AFTER PRINTING
1 1 1 0	***
1 2 0 1	**
1 0 2 1	**
0 1 1 1	***

5. FOUR PASCALS TRIANGLES PRINTED IN A SQUARE LIKE THIS:

BEFORE PRINTING	AFTER PRINTING
1 1 1 1 1 1	*****
1 2 2 1	**
1 3 3 1	**
1 4 6 4 1	**
1 6 15 20 15 6 1	**
1 10 36 84 70 36 21 10 1	**
1 15 90 378 1200 378 90 45 15 1	*****

6. FOUR PASCALS TRIANGLES PRINTED IN A SQUARE LIKE THIS:

BEFORE PRINTING	AFTER PRINTING
1 1 1 1 1 1	*****
1 2 3 3 2 1	**
1 3 6 6 3 1	**
1 6 15 20 15 6 1	**
1 10 36 84 70 36 21 10 1	**
1 15 90 378 1200 378 90 45 15 1	*****

7. STARTING PASCALS TRIANGLE IN ANY DESIRED ROW & COLUMN SO THAT A USER CAN TAPE TOGETHER SEVERAL PICTURES TO MAKE A LARGER DESIGN. THIS OPTION EXTENDS PICTURES LIKE THOSE SHOWN IN OPTION 1 IN 36 X 36 CHARACTER CHUNKS. ENTRIES UP TO 1000 ROWS AND COLUMNS ARE ACCEPTED.

WHAT'S YOUR PLEASURE (1,2,3,4,5,6 OR 7)? 4
YOUR PICTURE SHOULD HIGHLIGHT THE MULTIPLES OF WHAT NUMBER? 4
WHAT CHARACTER WOULD YOU LIKE THE COMPUTER TO TYPE REPRESENTING THE MULTIPLES OF 4 (ENTER ' ' FOR A BLANK)? " "
WHAT CHARACTER WOULD YOU LIKE THE COMPUTER TO TYPE REPRESENTING EACH OF THE OTHER NUMBERS IN THE PATTERN (ENTER ' ' FOR A BLANK)? *
HOW MANY ROWS AND COLUMNS IN THE ARRAY (36 IS MAX.)? 36
WOULD YOU LIKE A CALENDAR PRINTED WITH YOUR PICTURE? YES
WHAT YEAR BETWEEN 1600 AND 2300 WOULD YOU LIKE? 1979

Pinball

PINBALL is, naturally enough, a simulated pinball game—complete with bells if your terminal has them—in which the computer serves as the pinball machine. However, you don't need any quarters! The program is divided up into ten small routines contained within the whole. Each subprogram performs one task in simulating a pinball game.

Details on each task/subprogram are as follows.

1) Starting and monitoring the game.

This task is performed by the master function PINBAL, which is contained in lines 1-600 of the program. Pinbal asks if the user wants instructions or a picture at the start of the game, puts each new ball into play, moves the ball until it comes into contact with an object on the table, and tells the user when he is finished and if he has broken the table record.

2) Printing instructions.

This subprogram is on the lines numbered 1010-1999, and its major task is to print the instructions of the pinball game and then to branch to the picture program to print a picture of the table (see below). After the picture of the table is completed, this subroutine explains the function of each figure on the table.

3) Registering "hits" and computing new scores.

Lines 2010-3999 are in charge of taking action each time the space occupied by the ball on the table is not blank. These lines also prepare the table to take action on the next task, namely flipping the table's flippers when the ball approaches them.

4) Flipping the flippers.

This task is accomplished by the lines in the four thousand range. These lines also set up indicators for the monitor routine (1 above) to put the next ball into play if necessary and branch to the routine that adds bonus points for tags (letters A-J) knocked down during that ball's play.

5) Bonus points at the end of a ball's play.

Lines in the five thousand range handle this task and then branch back to the monitor routine to put the next ball into play. If all ten tabs are knocked down in one ball, the program immediately awards a bonus of 250 points and an extra ball to the player and resets the tabs for further play. Normally, bonus points are awarded at the rate of ten per tab at the end of a ball.

6) Printing pictures of the table.

Lines in the six thousand range print a picture of the pinball table, either at the beginning of play or randomly, at the rate of one picture for every twenty-five "hits."

7) Bouncing the ball off bumpers and the jackpot.

The ball is "bounced" by the routine beginning at line 7850.

8) Initializing the table.

The table is initialized at the beginning of the game by lines in the nine thousand range.

Suggestions for improvement and change.

- 1) Change the table as you wish by inserting or deleting bumpers, jackpot(s), gates (numbers, now 1-9 and 0), etc. You may also move the positions of any item on the table except the three flippers.
- 2) Program in new sorts of table objects.
- 3) If your system is so equipped, rig in the program with some synthesizer music to heighten realism!

Pinball was conceived and written by Donald-Bruce Abrams.

RUN

PINBALL
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

WELCOME TO COMPUTER PINBALL!!
WOULD YOU LIKE INSTRUCTIONS TO THIS
FANTASTIC GAME? YES

THE RULES OF COMPUTER PINBALL ARE FAIRLY SIMPLE. YOU GET A TOTAL OF FIVE BALLS. IF YOU SCORE MORE THAN 1600, YOU GET A SIXTH BALL. IF YOUR SIX BALL SCORE IS MORE THAN 2200, YOU GET A SEVENTH BALL.

THIS TABLE HAS THREE FLIPPERS, EACH OF WHICH PROTECT AN OUT CHUTE. HOWEVER, THIS SET DIFFERS FROM OTHER SETS, SINCE YOU MAY ONLY FLIP TWO OF THE FLIPPERS ANY TIME THE BALL APPROACHES THE CHUTE. NOTA BENE: YOU DO NOT!!! KNOW FOR SURE WHERE THE BALL IS!! SO, IF YOU FLIP THE WRONG TWO FLIPPERS, YOU LOSE THE BALL, AND THE NEXT BALL IS PUT INTO PLAY.

YOU CAN GET A PICTURE OF THE TABLE EVERY TIME THE BALL HITS AN OBJECT, SO THAT MAY HELP YOU SOMEWHAT. ALSO, YOU ARE TOLD WHERE THE BALL IS EACH TIME IT HITS(EVEN IF YOU DON'T GET A PICTURE). THERE IS SOME LOGIC TO THE CHOICE OF FLIPPERS, BUT SOME LUCK IS INVOLVED, TOO. THE FLIPPERS ARE NUMBERED 1,2, AND 3 FROM LEFT TO RIGHT, AND ARE SHOWN ON THE PICTURE BELOW AS '!' MARKS. SINCE LUCK PLAYS ONLY A SMALL PART IN CHOOSING THE CORRECT FLIPPER, YOU WILL DO POORLY IF YOU JUST GUESS WHICH FLIPPER THE BALL IS HEADED TOWARD...

THE TABLE LOOKS LIKE THIS:

```

*****
O          O
O  *  *  *  O
O  A  B  C  D  O
O  *  *  *  O
O  *  *  *  *  O
O  *  *  *  O
O  *  *  *  H  *O
O  *  *  *  O
O===      ===O
O  1  2  3  4  5  O
O  *  6  7  8  9  *  O
O===      O      ===O
O  O  O  O  O  O
!!!      !!!
O  \    /  O
O   I  J  O
O  \    /  O
O   \  /  O
O  ---!!---O

```

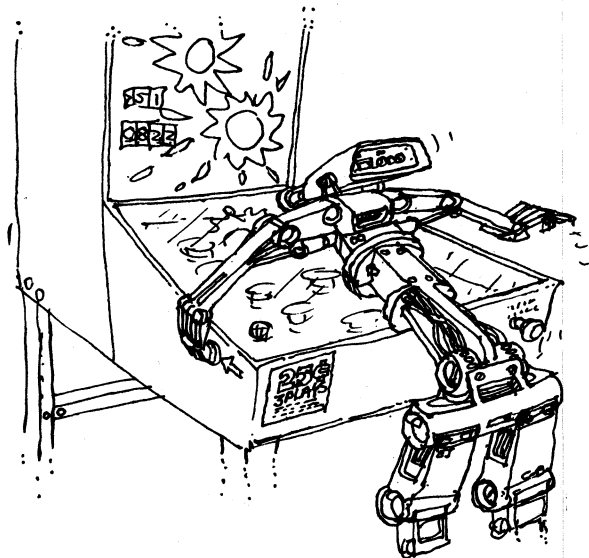

THE CENTER BUMPER(\$) IS THE JACKPOT!
THE BALL IS PUT INTO PLAY THROUGH THE UP ARROW(^), AND GOES UP AND AROUND, WHERE IT IS DEPOSITED ON THE UPPER HALF OF THE TABLE. THE BALL MAY BOUNCE FROM THE SIDE OF THE TABLE, AND MAY BOUNCE UP FROM THE LINES ON THE SIDE(=) AND FROM THE DIAGONALS(\ AND /) AT THE BOTTOM OF THE TABLE. THE BUMPER ARE INDICATED BY STARS(*).

FLIPPERS ARE SHOWN AS EXCLAMATION POINTS(! OR !!).

THE BALL MAY GO OUT OF PLAY THROUGH ONE OF THE FOUR HOLES IN THE BOARD(O), IN WHICH CASE YOU WILL GET A BONUS BUT LOSE THE BALL.

GATES ARE SHOWN BY THE NUMBERS 1-9, AND KNOCK-DOWN TABS ARE SHOWN AS THE LETTERS A-J. YOU GET A BONUS FOR THESE AT THE END OF A BALL, AND IF YOU KNOCK ALL OF THEM DOWN YOU GET A SPECIAL BONUS...

***EVERY ONCE IN A WHILE, I WILL SHOW YOU A PICTURE OF THE TABLE AS IT HITS SOMETHING. THE BALL IS SHOWN AS THE #.

THE BALL IS NOW AT (2 , 11).
YOU RECEIVE 15 POINTS FROM THE BUMPER AT 5 , 10 .
SCORE: 15

TAB H DOWN...
YOU RECEIVE 8 POINTS FROM THE BUMPER AT 6 , 14 .

Rabbit Chase

Seemingly, the purpose of this game is to chase-down and catch a rabbit. Now this rabbit is an elusive little devil—it can hop randomly in any direction. You can run at least as fast as the rabbit, maybe even faster (the computer will decide). You must get within 20 units of the rabbit to be able to catch him. Before each hop, the computer will print out your position, the rabbit's position, the direction the rabbit is going to jump, and your closest approach on the last hop. You are to tell the computer which direction you wish to run. All coordinates and directions are as a geometer would mark them on a standard Cartesian Coordinate System.

In addition to being good fun, this game gives you practice in using and visualizing an x-y coordinate plane. After each hop, consider the output and try to run the right direction. Try to do all the figuring in your head. Using scratch paper is considered to be

cheating (except for maybe the first time you play).

Suggested Modifications

1. Change the program so that you can choose your own speed.
2. The game is much more challenging when the "capture distance" can be varied. A distance of 50 units is a cinch, 15 units may make you wish for scratch paper, 5 units will require you to use a protractor and graph paper.
3. See if you can invent a way to extend this game to 3 dimensions! 4 dimensions! etc.!
4. You might try limiting the total number of hops and/or having the computer give hints when requested.

Rabbit Chase was written by Ted C. Park of Pacific Union College. It first appeared in *Creative Computing*, Mar/Apr 1975.

Roadrace

You are the driver of a race car on the notorious NY Route 20. You'll have to drive 5 miles with $\frac{1}{2}$ gallon of gas, while keeping alert for changes in the road conditions, other cars, etc.

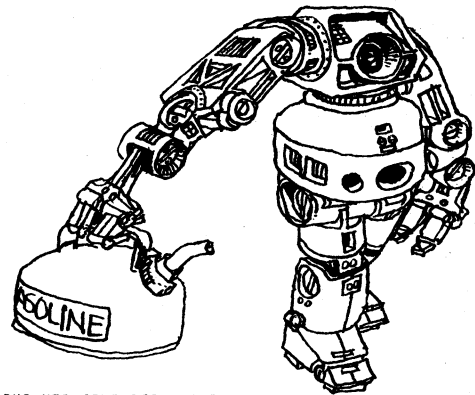

At the start you pick your car and course. During the race you control braking and acceleration.

Watch out for passing another car! If you try to go the same speed he's going, you're going to meet a Greyhound bus head-on!

The game is tough to win. I usually wipe out in a curve or run out of gas. You might want to increase your MPG rating...look at line 870.

Good luck!

This program originally appeared in *Creative Computing*, Jan/Feb 1975.

RUN

ROADRACE
CREATIVE COMPUTING MORRISTOWN NEW JERSEY

THIS IS THE PITTSFIELD-ALBANY ROAD RALLY

WELCOME TO THE FIRST ANNUAL PITTSFIELD-ALBANY ROAD RALLY.
YOU'LL BE DRIVING RT. 20. TRYING TO WIN THE RACE AND
STAY ALIVE IN THE BARGIN. GOOD LUCK!!

YOU HAVE YOUR CHOICE OF: (1) A VW; (2) 283 NOVA;
(3) Z-28; OR (4) FERRARI

CHOOSE THE CAR YOU WANT BY THE NUMBER IN FRONT OF IT.
REMEMBER, THE BETTER THE CAR, THE MORE GAS IT USES.
WHICH CAR? 3

NOW YOU CHOOSE WHICH COURSE YOU WANT TO RACE ON.
THE EASIEST COURSE IS NUMBER 1, AND IS THE STRAIGHTEST
ROUTE. NUMBER 5 CONSISTS MOSTLY OF TURNS AND TWISTS.
WHICH ROUTE DO YOU WANT? 1

YOU WILL NEED TO TRAVEL 5 MILES WITH .5 GALLONS OF GAS.
YOUR STATUS WILL BE SHOWN EACH 10 SECONDS. AFTER EACH
STATUS CHECK YOU WILL BE ASKED FOR A NEW RATE OF GAS.
A RATE OF +10 IS HARD ACCELERATION, AND -10 IS HARD BRAKING
ANY NUMBER IN BETWEEN IS ALLOWABLE.

PRESENT VELOCITY = 0 NO. OF GALLONS = .5
NO. OF MILES = 0 TIME PASSED = 0 SECONDS
WHAT IS YOUR NEW RATE OF GAS ? 10

Rotate

The game of Rotate is played on a four-by-four board filled randomly with the letters A through P. In a sense it is like the little plastic games with sliding pieces bearing the numbers 1-15 or letters A-0.

The object of the game is to put the letters in alphabetical order. This is done by rotating groups of four letters clockwise one position. The group to be rotated is specified by the positional number of the letter in the upper left-hand corner of the group. You are also given one special move which permits you to exchange any two adjacent

letters. You probably don't want to use this move too early in the game; indeed, sometimes it's not necessary at all, and since you get it only one time, once you use it you can't recover. Your only move then is to type a zero to give up.

Typically, a game will take from 20 to 30 moves to win. I haven't figured out the worst possible case (assuming an intelligent method of play); I'd be happy to hear from a reader on this. Have fun!

Rotate was written by me, David Ahl, and first appeared in *Creative Computing*, Sep/Oct 1977.

RUN

ROTATE
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

INSTRUCTIONS? YES

IN THIS GAME THE BOARD IS LAID OUT AS FOLLOWS:

1	2	3	4
5	6	7	8
9	10	11	12
13	14	15	16

BOARD POSITIONS ARE OCCUPIED RANDOMLY BY THE LETTERS A TO P.
THE OBJECT OF THE GAME IS TO ORDER THE LETTERS BY ROTATING
ANY FOUR LETTERS CLOCKWISE ONE POSITION. YOU SPECIFY THE
UPPER LEFT POSITION OF THE FOUR YOU WISH TO ROTATE, I.E.,
VALID MOVES ARE 1, 2, 3, 5, 6, 7, 9, 10 AND 11.
CONSEQUENTLY, IF THE BOARD LOOKED LIKE:

A	C	G	D
E	B	F	H
I	J	K	L
M	N	O	P

AND YOU ROTATED POSITION 2, THE BOARD WOULD BE:

A	C	G	D
E	B	F	H
I	J	K	L
M	N	O	P

AND YOU WOULD WIN !

YOU ALSO GET ONE 'SPECIAL' MOVE PER GAME WHICH YOU MAY OR
MAY NOT NEED. THE SPECIAL MOVE ALLOWS YOU TO EXCHANGE
ANY TWO ADJACENT LETTERS IN A ROW. TO MAKE THIS MOVE,
INPUT A '-1' AS YOUR MOVE AND YOU WILL BE ASKED FOR THE
POSITIONS OF THE TWO LETTERS TO EXCHANGE. REMEMBER --
ONLY ONE SPECIAL MOVE PER GAME!

TO GIVE UP AT ANY TIME, TYPE A '0'.

GOOD LUCK !

Safe

In a sense, this is another game in the "guess a mystery number" family. However, it has quite a different "twist." In this game, you are trying to open a safe by turning or twisting a dial back and forth between one and ninety-nine or ninety-nine and one.

The instructions shown in the sample run are very complete. However, one hint that will help you when you start playing is that it is usually best to start at ninety-nine when going to the right because if you get a click, the number must be close. If not, you can step it down by eights or tens until you get the first click and then judge from there.

Safe was created and written by Kevin Ashley.

NOTE: There is no spot 0 (zero) and it spins back past the last number automatically as in most locks.

CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU WANT DIRECTIONS? YES

YOU ARE A BURGLAR AND HAVE ENCOUNTERED A SAFE. YOU MUST OPEN THE SAFE TO GET THE SECRET PLANS THAT YOU CAME FOR. TO DO THIS, YOU MUST ENTER THE NUMBER OF WHAT YOU WANT THE DIAL TURNED TO, THE COMPUTER WILL ACT AS THE SAFE AND WILL HELP YOU BY GIVING A SORT OF CLUE, THAT IS YOU WILL HEAR A CLICK AT EVENLY SPACED NOTCHES AS YOU MOVE TO THE PROPER NUMBER. THERE ARE FOUR OF THEM BEFORE THE FINAL CLICK IS HEARD. AFTER THE FINAL ONE IS HEARD, YOU WILL GO ON TO THE NEXT NUMBER. THE COMPUTER WILL SAY 'CLICK' FOR EACH NOTCH THAT YOU PASS AND '***CLICK**' WHEN YOU REACH THE PROPER NUMBER. IF YOU PASS IT OR TAKE LONGER THAN TEN TRIES ON ANY ONE NUMBER, YOU WILL ACTIVATE THE ALARM.

REMEMBER THAT WHEN YOU TURN THE DIAL TO THE LEFT, THE NUMBERS GO FROM 1-99, AND WHEN YOU GO TO THE RIGHT, THE NUMBERS GO FROM 99-1

---	---

Scales

This program tests your knowledge of different types of musical scales. It generates 11 types of scales: major, natural minor, harmonic minor, Hungarian minor, dorian, phrygian, lydian, mixolydian, locrian, and whole tone.

Prior to running the program, test yourself off line on a sheet of paper by writing down several types of scales and 8 notes starting at a note chosen by you. Then run the program to check your answers.

When you run this program, you will be asked, "Which type of scale is wanted?" Respond by typing the first two letters of the name of the desired scale followed immediately by the desired key. Use a lower case 'b' for the flat and use '#' for the sharp. Sample inputs would be *phe* for phrygian starting on E, *maf#* for major on F-sharp, and *whg* for whole tone on G.

The author, Marvin S. Thostenson, is at the School of Music, University of Iowa. Scales first appeared in *Creative Computing*, Mar/Apr 1977.

ELEVEN SCALE TYPES -- MAJOR, MINOR, MODAL, AND WHOLE TONE

This program prints in letter names one octave upward, the major, the natural, harmonic, melodic, and Hungarian minors, the dorian, phrygian, lydian, mixolydian, and locrian modes, and the whole tone scales.

Use a 3- or 4-character input: the first 2 char's are the scale type, and the 3rd char'r is the single letter tonic, or the last two char's are the tonic degree or the key signature. SCALE TYPES-- na na ha ne do ph ly mi lo hu and wh Input either a tonic or a signature.

Schmoo

Schmoos are imaginary creatures who love being splattered with juicy mudballs. You, being a schmoo lover, try to make schmoos happy by tossing mudballs at them. It will help you in playing this game to know a little bit about grids and angles like in the X,Y coordinate system 2,-3 means right 2 and down 3. If 0 degrees is the angle coinciding with the positive X axis, then 2,-3 would be in the fourth quadrant and would correspond to angles between 270 and 360 degrees.

If you're pretty good, you can "splat the schmoo" in about eight tries; but don't cheat and use the formula. And don't expect me to tell you where it's hidden in the program!

If you want to extend the Schmoo game, you might want to add a third dimension with flying schmoos. The program shouldn't be too hard and it would be a really neat game. If you want to try something easier, fix Schmoo so that it requires initial velocities as well as angles. You could even make a low-gravity (lunar version) of Schmoo.

Schmoo was conceived and written by Frederick H. Bell at the University of Pittsburgh. It first appeared in *Creative Computing*, Sep/Oct 1975.

RUN

SCHMOO

CREATIVE COMPUTING MORRISTOWN NEW JERSEY

THIS IS A NEW SCHMOO GAME. SCHMOOS ARE IMAGINARY CREATURES WHO LOVE BEING SPLATTED WITH JUICY MUD BALLS. YOU, BEING A SCHMOO LOVER, TRY TO MAKE SCHMOOS HAPPY BY TOSSING MUD BALLS AT THEM. YOU HAVE A MECHANICAL MUD SLINGER THAT WILL SLING MUD TO A MAXIMUM DISTANCE OF 46,500 INCHES. YOUR JOB IS TO SET THE MUD SLINGER AT THE CORRECT ELEVATION (0 TO 90) AND THE CORRECT DIRECTIONAL ANGLE (0 TO 360) TO SPLAT THE SCHMOO. A HIT WITHIN 100 INCHES OF THE SCHMOO WILL SPLATTER HIM.

COORDINATES OF THE SCHMOO ARE (29007 , 9760).

Seabattle

The object of the game of SEA BATTLE is quite simple. You are a submarine with a mission to seek out and destroy all of the enemy ships in your area, using whatever means are available. This includes torpedoes, Polaris missiles, sabotage, and suicide. The enemy, in turn, throws out depth charges in an attempt to destroy you. There are also some underwater mines which have a nasty habit of blowing you up when you run into them. Other hazards are some very hungry sea monsters lurking about who have a taste for submarine sandwiches.

I started writing this program two years ago, and finished my last modifications just recently. Of course, this doesn't mean I worked on it continuously for two years. There were some long 4-6 month stretches when I didn't do anything to it. It started out as a very simple program, and I just kept thinking of things to add to it.

I am currently a senior in Simley Senior High School in Inver Grove Heights, Minnesota, and am 18 years old. I have been working with computers since the ninth grade, and have written many programs, including this one.

This program always draws a crowd in our school computer room, even

from kids who don't even know which end of a teletype to type on. I built every possible inconvenience into it, to keep people from winning too easily. I am happy to say that when a person wins now, it's headline news. There are always muttered oaths to beat the computer next time, and this alone brings me more enjoyment than playing the program.

As you can see, the program is quite long, and initially I had some storage problems, as I'm sure many of you will have, too. All I can say is to slice away at some of the more trivial commands and options until (hopefully) you cut it down to a reasonable size. If compiling space is a problem, you may have to divide the program into subprograms chained together. If you don't have this capability, you'll have to brainstorm your own ideas.

Here are some of the anomalies our HP 2000 system. Strings are dimensioned from one to 72 characters in length. Positions on the string are identified with two numbers. Ex. A\$(2,4) A\$ is the name of the string. The 2 tells the computer to begin the substring at the second character. The 4 tells the computer to end the substring at the fourth character of A\$. So, A\$(1,1) allocates the first character of

A\$. I used this for identifying 'Y' and 'N' in yes/no responses.

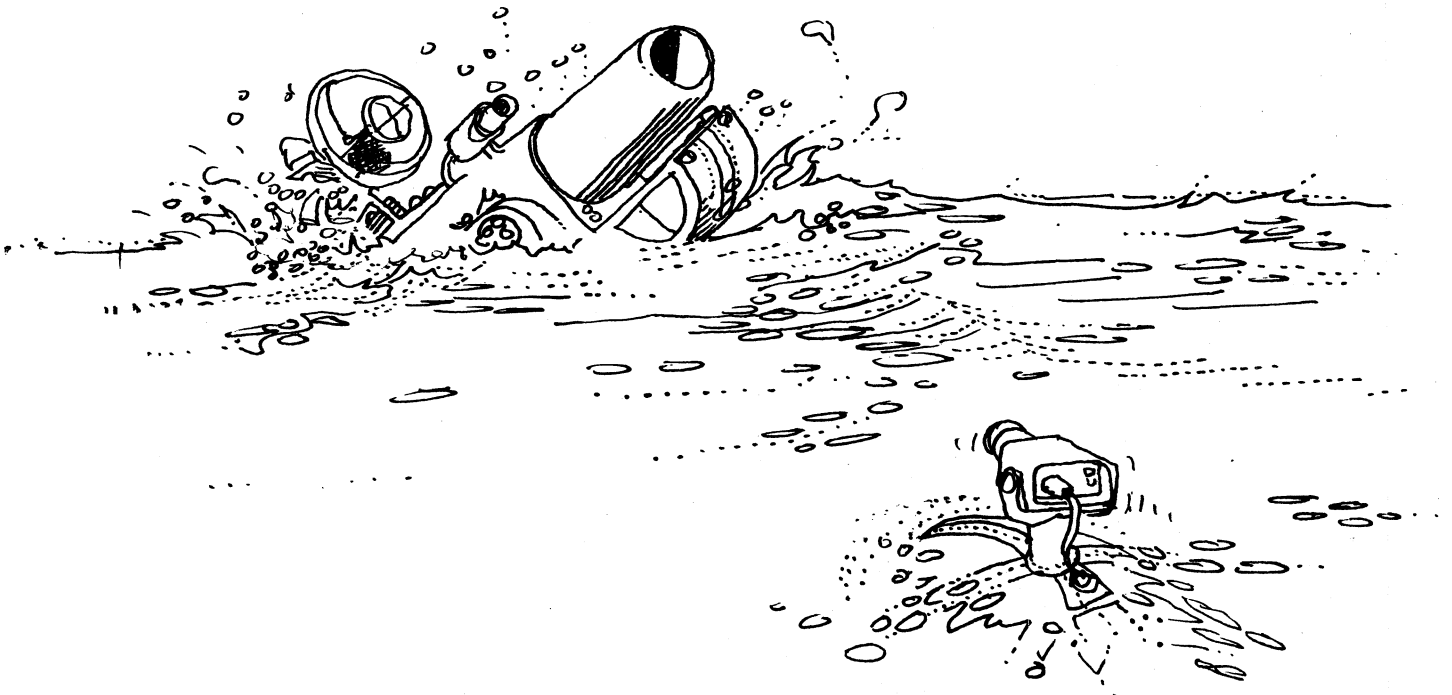

Line 590 is an example of logical operation. It tells the computer that if the expression is nonzero, to proceed to the line specified. If it is zero, it will fall through to the next line.

A slightly different type of logical operation is found in lines 3020-3050. In these lines the logical quantity is evaluated first, and if true, the quantity is set to 1. If it is false, it is set to 0. These can all be taken care of with IF-THEN statements if necessary.

I hope that the size of the program does not scare too many people away. It should be able to be made compatible with very little rewriting. If you have a few hours of free time to rewrite a little, it should be worth the effort.

I tried to throw a lot of random statements in there to make playing the game more uncertain. Cutting some of these out may save some space, if that's a problem for you.

Note: The writeup above, by Vincent Erickson, refers to the original HP version. The one presented here is in standard Microsoft Basic. Some conversion notes by Steve North are found in the listing, lines 90-230.

THIS IS THE GAME OF SEA BATTLE!!! THE OBJECT OF THE GAME IS TO DESTROY ALL OF THE ENEMY SHIPS IN YOUR 20 BY 20 AREA WITH THE VARIOUS WEAPONS IN YOUR SUBMARINE'S ARSENAL. YOU MUST DO THIS, HOWEVER, WITHOUT LETTING THE ENEMY DESTROY YOU FIRST!!

THERE ARE SEVERAL INTERESTING HAZARDS IN THE GAME. THEY INCLUDE:

- .. DEPTH CHARGES FROM NEARBY ENEMY SHIPS.
- .. VERY HUNGRY SEA MONSTERS!!
- .. AND HIDDEN UNDERWATER MINES.

THE DEPTH CHARGES ARE EFFECTIVE TO ANY DEPTH, BUT THEY LOSE THEIR EFFECTIVENESS OVER DISTANCE, SO THE FARTHER YOU ARE FROM ANY SHIPS, THE BETTER!

THE SEA MONSTERS TAKE A MEANDERING COURSE THROUGH YOUR AREA THAT MAY BRING IT CLOSE ENOUGH TO ATTACK YOU. YOU RARELY SURVIVE. THEY ALSO LIKE TO EAT YOUR TORPEDOS, BUT MISSILES WILL KILL THEM.

THE ENEMY SHIPS MOVE ON EVERY TURN, IN A FIXED COURSE, UNLESS THEY ENCOUNTER OBSTACLES. THEY WILL GET BLOWN UP BY MINES, AND GET EATEN BY SEA MONSTERS TOO.

YOU HAVE TEN ORDERS THAT YOU MAY GIVE. THEY ARE:

#0: NAVIGATION - THIS COMMAND ALLOWS YOU TO MOVE IN A PARTICULAR DIRECTION AND DISTANCE ACROSS YOUR AREA. THE 8 1 2 DIRECTION IS DETERMINED BY THE GRAPH AT LEFT. THERE \'/ ARE 8 DIRECTIONS TO MOVE IN, AND THEY ARE THE SAME 7-* -3 ANYTIME YOU ARE ASKED FOR A COURSE. FOR EXAMPLE, /\ TO MOVE NORTH, YOU WOULD USE COURSE #1. THE COMPUTER 6 5 4 WILL ALSO ASK FOR AN AMOUNT OF POWER. IT TAKES 100 UNITS OF POWER TO MOVE YOUR SUB 1 SPACE. BEWARE OF OBSTACLES!! IF YOU USE MORE THAN 1000 UNITS IN A TURN, THERE IS AN OVERLOAD DANGER, SO BE VERY CAREFUL!!

#1: SONAR - THIS COMMAND HAS TWO OPTIONS. OPTION #1 GIVES DIRECTIONAL INFORMATION, SHOWING THE DIRECTIONS AND DISTANCES IN WHICH THERE ARE ENEMY SHIPS. THIS IS USEFUL FOR SHOOTING AT LONG RANGES, WHERE IT IS DIFFICULT TO TELL IF A SHIP IS IN DIRECT LINE.

OPTION #0 PRINTS OUT A MAP OF YOUR AREA IN A SQUARE. (IT USES SYMBOLS FOR THE MAP) '*' INDICATES DRY LAND, '\$' IS AN UNDERWATER MINE, '\S/' IS AN ENEMY SHIP. '-#-' IS A SEA MONSTER. 'IH!' IS YOUR HEADQUARTERS, AND FINALLY, '(X)' IS YOU!!!

EVERY 50 FEET, A '.' WILL APPEAR INSIDE THE SCREEN. THIS IS A SONAR MALFUNCTION, AND SO THE OBJECT THERE ISN'T IDENTIFIED. IF YOU ARE ABOVE 50 FEET, WAVES WILL SHOW UP AS '..'

#2: TORPEDO CONTROL - THIS COMMAND ALLOWS YOU TO SHOOT 1 OF YOUR 10 TORPEDOS AT ENEMY SHIPS. THE COMPUTER WILL ONLY REQUIRE THE DIRECTION TO SHOOT, USING THE INDICATOR ABOVE. THEY HAVE A RANGE OF 7-13 SPACES. ONE TORPEDO GETS ONE SHIP.

#3: POLARIS MISSILE CONTROL - THIS COMMAND ALLOWS YOU TO LAUNCH ONE OF YOUR POLARIS MISSILES AGAINST THE ENEMY. THE COMPUTER WILL ASK FOR A COURSE AND FUEL. IT TAKES 75 LBS. OF FUEL TO BOOST A MISSILE 1 SPACE. SINCE THEY ARE SO MUCH MORE POWERFUL, THEY WILL COMPLETELY DESTROY THE SPACE THEY LAND ON, PLUS ALL OF THE IMMEDIATELY ADJACENT ONES. MISSILES DESTROY EVERYTHING!!!

#4: MANUEVERING - THIS COMMAND ALLOWS YOU TO CHANGE THE DEPTH YOU'RE AT. YOU MAY WANT TO DO THIS IF YOU ARE BADLY DAMAGED, BECAUSE REPAIRS GO ON TWICE AS QUICKLY BELOW 2500 FT. AND ABOVE 50 FT. THAN IN BETWEEN. YOU START THE GAME AT 100 FT. YOU USE UP ABOUT 1 POWER UNIT FOR EVERY 2 FT. YOU CHANGE.

#5: STATUS/DAMAGE REPORT - THIS COMMAND GIVES YOU THE STATUS OF YOUR SUB. IT TELLS YOU HOW MUCH IS LEFT IN YOUR ARSENAL, WHICH ITEMS ARE DAMAGED, AND HOW MUCH.

#6: HEADQUARTERS - THIS COMMAND ALLOWS SCUBA DIVERS FROM YOUR HEADQUARTERS TO REPLENISH YOUR SUPPLY OF WEAPONS AND MEN. YOU MUST BE AT 50 FT. OR LESS, AND 2 OR LESS SPACES AWAY TO DO THIS HOWEVER, AND YOU CAN ONLY DO IT TWICE.

#7: SABOTAGE (SCUBA) - THIS COMMAND ALLOWS YOU TO SEND MEN OUT ON A SABOTAGE MISSION AGAINST ENEMY SHIPS. YOU MAY ONLY GO AGAINST SHIPS WITHIN 3 SPACES OF YOU, AND YOU MUST LEAVE AT LEAST 10 MEN ON BOARD THE SUB TO RUN IT.

#8: POWER CONVERSION - THIS COMMAND ALLOWS YOU TO CHANGE FUEL TO POWER, OR VICE-VERSA.

#9: SURRENDER - THIS COMMAND IS ONLY FOR COWARDS AND TRAITORS!!

YOU START THE GAME WITH THE FOLLOWING SUPPLIES:

6000 UNITS OF POWER, 2500 LBS. OF ROCKET FUEL, 10 TORPEDOS
3 MISSILES, 1 HEADQUARTERS, AND A RANDOM NUMBER OF SHIPS.

I LEFT SOME INTERESTING DETAILS OUT OF THE INSTRUCTIONS, TO MAKE PLAYING THE GAME THE FIRST FEW TIMES MORE INTERESTING.

YOU START THE GAME IN THE ISLAND'S LAGOON, AND IT IS YOUR DUTY TO SEEK OUT AND DESTROY THE ENEMY AT ALL COSTS!!!

Seawar

You are the commander of a fleet of ships operating in enemy territory. Your task force consists of 9 ships, and the enemy has 9 ships. Whoever sinks all of the opponent's ships first wins the campaign.

You, as the commander, must provide the angle of elevation at which the guns will be fired, neglecting air resistance. Your instruments will read the range to the target, and the initial velocity is held constant at about 675 meters per second.

SEAWAR will help you learn about the paths of projectiles and what happens as the angle of elevation varies.

1. First, what do you think the path of the projectile looks like. Make a sketch. (If you're still not sure, do some research in the library—it will help you win the battle, commander!)
 - a. What angle of elevation do you think will give the maximum range?
 - b. What will happen if you fire the guns at 0°?
 - c. What will happen to the projectile if you fire it straight up?
2. After becoming proficient at winning the battle, change the initial velocity of the projectile. How does this affect the range?

The original SEAWAR had a timing function that allowed only about 7 seconds to make your next move. If your computer has a timer, this would be a neat addition.

The origin of SEAWAR is unknown. It was revised and submitted to us by David S. Paxton. It was further revised and the writeup prepared by Mary T. Dobbs, Mathematics and Science Center, Glen Allen, Virginia. It first appeared in *Creative Computing*, May/June 1975.

RUN

SEAWAR
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

YOU COMMAND A FLEET OF SHIPS OPERATING IN
ENEMY TERRITORY!!!
DO YOU NEED ANY ASSISTANCE? YES
YOU TELL YOUR GUN CREWS THE ELEVATION TO SET THEIR GUNS.
ELEVATION IS IN DEGREES FROM 0 TO 360.
YOUR TASK FORCE CONSISTS OF 3 DESTROYERS, 2 CRUISERS,
2 BATTLESHIPS, AND 2 HEAVY AIRCRAFT CARRIERS.
THE ENEMY HAS 9 SHIPS FOR HIS DEFENSE.
IF YOU SUCCEED IN SINKING ALL HIS SHIPS BEFORE HE SINKS
YOURS, YOU HAVE WON. HOWEVER, IF HE SINKS ALL YOUR SHIPS
BEFORE YOU HAVE DEFEATED HIM, YOU HAVE LOST!!
LET US BEGIN!!!

YOUR FLAGSHIP HAS DETECTED A U-BOAT APPROACHING AT 5 PHANTOMS.
YOUR SUBMARINE DETECTION EQUIPMENT READS THE RANGE TO THE TARGET
AS 39481 METERS.
THE U-BOAT HAS COMMENCED FIRING TORPEDOES AT YOUR SHIPS.
HIS FIRST TORPEDO EXPLODED 281 METERS BEHIND YOUR SHIP.
WHAT ELEVATION ** ? 38

-----FIRE!!!
DEPTH CHARGE EXPLODED 5637 METERS AFT OF TARGET.
THE ENEMY U-BOAT SANK ONE OF YOUR DESTROYERS!!
WHAT ELEVATION ** ? 32.4

-----FIRE!!!
DEPTH CHARGE EXPLODED 2592 METERS AFT OF TARGET.
THE ENEMY U-BOAT SANK YOUR HEAVY CRUISER!!
WHAT ELEVATION ** ? 29.9

-----FIRE!!!
DEPTH CHARGE EXPLODED 707 METERS AFT OF TARGET.
THE ENEMY TORPEDO EXPLODED 103 METERS IN
FRONT OF YOUR SHIP.
WHAT ELEVATION ** ? 29.2

-----FIRE!!!
DEPTH CHARGE EXPLODED 123 METERS AFT OF TARGET.
THE ENEMY U-BOAT SANK ANOTHER OF YOUR DESTROYERS!!
WHAT ELEVATION ** ? 29.07

-----FIRE!!!
DEPTH CHARGE EXPLODED RIGHT ON TOP OF THAT BABY!!!

TARGET DESTROYED!!! ** 5 ** ROUNDS EXPENDED.
YOU HAVE LOST 3 SHIPS, AND THE ENEMY HAS LOST 1.

YOUR FLAGSHIP REPORTS THE SIGHTING OF AN ENEMY 210 MM SHORE GUN
YOUR INSTRUMENTS READ THE RANGE TO THE TARGET AS 41020 METERS.
THE ENEMY 210 MM SHORE GUN IS FIRING ON YOUR SHIPS!
HIS FIRST ROUND FELL 113 METERS SHORT.
WHAT ELEVATION ** ? 32

-----FIRE!!!

SHELL OVERSHOT TARGET BY 773 METERS.
THE ENEMY 210 MM SHORE GUN SANK ONE OF YOUR BATTLESHIPS!!
WHAT ELEVATION ** ? 31.27

-----FIRE!!!

SHELL OVERSHOT TARGET BY 240 METERS.
THE ENEMY 210 MM SHORE GUN SANK YOUR LAST DESTROYER!!
WHAT ELEVATION ** ? 31./\07

-----FIRE!!!

** BOOM **

TARGET DESTROYED!!! ** 3 ** ROUNDS EXPENDED.
YOU HAVE LOST 5 SHIPS, AND THE ENEMY HAS LOST 2 .

YOUR FLAGSHIP REPORTS THE SIGHTING OF AN ENEMY 70,000 TON CRUISER
YOUR INSTRUMENTS READ THE RANGE TO THE TARGET AS 41009 METERS.
THE ENEMY 70,000 TON CRUISER IS FIRING ON YOUR SHIPS!
IN FACT, HE JUST SANK YOUR AIRCRAFT CARRIER!!
WHAT ELEVATION ** ? 32

-----FIRE!!!

SHELL OVERSHOT TARGET BY 784 METERS.
THE ENEMY 70,000 TON CRUISER SANK YOUR LIGHT CRUISER!!
WHAT ELEVATION ** ? 31.1

-----FIRE!!!

SHELL OVERSHOT TARGET BY 123 METERS.
THE ENEMY 70,000 TON CRUISER SANK YOUR LAST AIRCRAFT CARRIER!!
WHAT ELEVATION ** ? 30.9

-----FIRE!!!

** BOOM **

TARGET DESTROYED!!! ** 3 ** ROUNDS EXPENDED.
YOU HAVE LOST 8 SHIPS, AND THE ENEMY HAS LOST 3 .

YOUR FLAGSHIP REPORTS THE SIGHTING OF AN ENEMY BATTLESHIP
YOUR INSTRUMENTS READ THE RANGE TO THE TARGET AS 42864 METERS.
THE ENEMY BATTLESHIP IS FIRING ON YOUR SHIPS!
IN FACT, HE JUST SANK YOUR LAST BATTLESHIP!!
***** PEACE *****

YOU FIRED 11 ROUNDS. THE ENEMY FIRED 10
ROUNDS.
ALL OF YOUR SHIPS HAVE BEEN SUNK. SO SORRY
THE BATTLE IS OVER.....THE ENEMY WINS!
OK

Shoot

The scene is some time in the near future. You and another individual on the other side of the planet are the only survivors of a total atomic war. (Yes, I know it's corny.) This war was fought totally with ground based atomic missiles. Both you and the surviving enemy have found the last missile bases left from each side. Fortunately (for me anyway), these missile grids are made and operated identically.

Each player moves on and is restricted to a 10 by 10 missile matrix. Every co-ordinate on the grid corresponds to a mini-missile base. At every base, there is a terminal tied into the main scanner computer, located safely many miles away. From each terminal, the player obtains information relevant to the current situation. Because of the way the missiles are constructed, the area left after lift-off is exposed to high doses of raw radiation and may not be occupied by life. The same is true of an area that has been struck by a missile, it is extremely lethal and would kill anything entering the vicinity.

Due to the fact that everyone else is dead, all machinery must be operated manually. This means that the players must set the target co-ordinates and latch the fuse for the missile to be shot off. After that, the players must flee the area. This is done in a small shuttle car, equipped with sensor devices to avoid dangerous areas. But due to its limited power reserves, it can go only two units in any direction, up, down, or diagonally, and no more or less. The danger involved is that while in flight, the player is away from a scanner computer terminal and will not know where the enemy missile is aimed to land.

In the time it takes to move to the new base, the missiles will be at the apex of their flight above the earth. There the computer will give out tracking information as to whether you hit the enemy, or he hit you, or both. If the missile is coming down to hit the player, there is no escape. The time required to recharge the shuttle car is

longer than the time it takes for the missile to hit the ground. If either player is unfortunate enough to get trapped into a corner, the seeping radiation will eventually kill him.

So it is plainly a game of kill or be killed. However, don't be misled into thinking that it is simply a game of luck, several different strategies may be applied to destroy the enemy.

Line by line explanation.

Lines 440-490. I assemble three commonly used print strings. S\$ becomes a string of fourteen spaces.

Lines 500-530. Here is the dimensioning of the four matrices, and the start-up and circle check data. The matrices "I" and "H" stand for player and enemy playing fields (I and HE). the "T" matrix is a temporary list for use by the enemy, and is part of the "smart" algorithm. It is loaded up during each pass with the possible places he could move to, or looking at the possible places where the player could move. The "P" matrix is filled with the eight possible co-ordinates that one may move to. I might say here that the program may be modified for a longer and more challenging game by changing the data in line 530. Change all the twos to ones and the two players may move only one unit away from their previous position, instead of the two used now.

Lines 540-730. I set up a random number to decide which pair of corner co-ordinates the enemy will be started in. I then proceed to set the pair from 550 to 570. I then digress to zero my matrices. Picking up where I left off, lines 640 to 680 peel away any unused, but unwanted data, keying on the unique first number of the last pair. From there the remaining data is dumped into "P."

Lines 740-820. Make the report that the enemy has been "fooling around." The starting co-ordinates for the player are then obtained and checked. From there the valid loop switch is set, a map is printed, and the program is thrust headlong into the main routine.

Lines 830-920. Here the co-ordinates for the missile and the new spot to sit on are obtained and verified of their validity.

Lines 930-1080. "Enemy" decides where player might be going from last position, and aims his missile in that direction.

Lines 1090-1280. The "enemy" looks for place to go. If he has cornered himself, say so, prepare him for his execution, and make it look like he hasn't fired a missile. Otherwise, he chooses a new co-ordinate to rest upon.

Lines 1290-1480. Now we move everyone around (where we can), and start to find out who got who, if anyone at all. Then from 1430-1480 there is a check to discover whether the player has a place to go or not. If not, another message is printed and player will die quietly after output.

Lines 1490-1780. Here the printing of the two matrices is done. A value of one or zero is tested for making the proper symbol. After the output is complete "Z" is checked to see if anyone died on the way. If no one had, return for another pass, else terminate the program.

I spent a lot of time debugging this program. After I finally got it to work, I found that it became somewhat addictive. The tension does seem to build when the game reaches the final possible moves. I found there are two different useful strategies that may be applied.

My favorite is building a fence around the enemy with missile shots. The idea is to cut off his movements while trying to keep out of his way. The other method is the one the enemy uses. Here the player shoots at where he thinks the opponent may be each time. Quite often the game is ended early, the odds of being hit become too great.

Any method you use, or another you may think of, will lend long hours of enjoyment. Have fun!

The program and description were written by David Spencer.

CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU WANT INSTRUCTIONS? YES

IT IS THE FINAL HOUR OF MAN. YOU AND A WARRING NATION HAVE ENTERED INTO A LAST CONTEST. ALL THE LIFE NOW LEFT ON EARTH ARE YOU AND YOUR ENEMY. BOTH HE AND YOU HAVE FOUND THE LAST REMAINING ATOMIC MISSILE SILO MATRICES ESTABLISHED BY THE NOW-DEAD SUPERPOWERS. HE, LIKE YOU, WISHES NOT TO DIE BUT TO LIVE IN PEACE.

HOWEVER IT HAS BECOME APPARENT THAT HE FEELS HIS PEACE THREATENED AND IS PREPARING AN ATTACK. BOTH YOU AND HE HAVE SCANNERS THAT WILL WARN YOU OF HIS MOVEMENTS AND TRACK THE FLIGHT OF HIS ATOMIC MISSILES, THUS HE IS WORKING SLOWLY. THE ENEMY, LIKE YOURSELF, HAS A MISSILE GRID NEARLY IDENTICAL IN STRUCTURE AND OPERATION TO YOURS, BECAUSE YOU ARE THE ONLY ONE LEFT, IT WILL BE NECESSARY TO FIRE ALL YOUR MISSILES MANUALLY. ONCE THE FUSE IS SET, YOU MUST FLEE THE AREA AND GET TWO GRID UNITS AWAY. YOU MAY NEVER RETURN TO THIS SPOT, OR A SPOT WHERE A MISSILE HAS LANDED; THE RADIATION IS INTENSE AND WOULD MEAN AN INSTANT, PAINFUL DEATH.

SO THE STAGE HAS BEEN SET. THERE IS PEACE UNTIL THE SIGN THAT THE ENEMY HAS MOVED TO HIS MISSILE RANGE. HE WILL FIRE EVERY TIME YOU WILL, AND DO SO UNTIL ONE OF YOU IS DESTROYED.

EACH TIME A ROUND OF MISSILES HAS BEEN FIRED, THE SCANNERS WILL REPORT THE STATUS OF BOTH YOUR'S AND THE ENEMY'S GRID TERRITORY. IT WILL SHOW ALL AREAS THAT HAVE HAD EITHER A MISSILE HIT OR A MISSILE FIRED FROM IT. WITH THIS CONTINUALLY UPDATED MAP, YOU MAY BE ABLE TO INDUCTIVELY DISCOVER OR TRAP YOUR OPPONENT. BEWARE, HE WILL BE TRYING TO DO THE SAME TO YOU.

Smash

This game is a one-lap jalopy race. There is one big problem: you don't know the shape of the course or the safe speed with which you can go around the corners. Consequently you're likely to smash up fairly frequently or else go so slowly that you don't earn a good placing among the winners. However, after four or five plays of the game you'll begin to get the hang of it and you'll be able to whip around the course in grand fashion. The instructions in the program are quite detailed. Have fun!

SMASH was written by Scott Byron

SMASH
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU NEED INSTRUCTIONS? YES

THIS IS SMASH--THE GAME THAT SIMULATES A CAR RACE. YOU WILL RESPOND WITH ONE OF THE FOLLOWING MANUEVERS WHEN A '?' IS TYPED. THE POSITION NUMBERS REFER TO THE POINT AT WHICH YOU ARE ON THE TRACK--THEY GO AS FOLLOWS:

- 1-THE START LINE
- 2-MID STRAIGHT-AWAY
- 3-COMING UP ON A LEFT TURN
- 4-MID LEFT TURN
- 5-COMING UP ON A RIGHT TURN
- 6-MID-RIGHT TURN
- 7-THE FINISH LINE

MANUEVERS

- 1-FLOOR IT
- 2-ACCELERATE(MODERATE)
- 3-BRAKE SLIGHT
- 4-JAM ON THE BRAKES
- 5-SHARP RIGHT
- 6-MODERATE RIGHT
- 7-SHARP LEFT
- 8-MODERATE LEFT

Strike 9

This is a simple game based on the numbers 1 through 9, and a pair of dice. First, the computer rolls a random number for your "dice." Then you must take that number from the total of your board numbers 1-9. To win you must remove all of your board numbers. With each roll you must remove the total number of that roll from the board or you lose.

One strategy is to remove the largest numbers possible with each roll, or you can try to get the most numbers removed. For example, if the roll is 10, you might want to remove the 1, 2, 3 and 4 instead of the 1 and 9.

You may want to have competition and players can alternate with rolls. Then the player who can't remove all numbers from his/her roll loses.

Strike 9 was conceived by Bruce Grembowski and first appeared in *Creative Computing*, Jan/Feb 1977.

RUN

STRIKE 9
CREATIVE COMPUTING
MORRISTOWN NEW JERSEY

DO YOU NEED INSTRUCTIONS ? YES
STRIKE NINE IS PLAYED WITH A PAIR OF DICE AND A
BOARD WITH NINE NUMBERS: 1 2 3 4 5 6 7 8 9. YOU
ARE GIVEN A ROLL AND CAN KNOCK OFF UP TO 4 NUMBERS.
IF YOU INPUT THAT YOU WANT TO REMOVE 5 NUMBERS, YOU
WILL BE GIVEN A CHART OF THE NUMBERS YOU HAVE LEFT
TO REMOVE. NEXT YOU INPUT HOW MANY NUMBERS YOU WANT
TO REMOVE, AND THEN INPUT THE NUMBERS YOU WANT TO
TAKE OFF, ONE AT A TIME. THE NUMBERS YOU TAKE OFF
MUST ADD UP TO THE ROLL. YOU WIN BY REMOVING EVERY
NUMBER FROM THE BOARD. YOU LOSE IF YOU CANNOT
REMOVE ALL NUMBERS WITH THE ROLL YOU HAVE.

READY TO PLAY?

Tennis

Tennis is, as its name implies, a tennis match. In this game you have several options available to you as the position on the court that you wish to play from, the placement of your shot that you're trying for, and the speed or type of shot. As in normal tennis, you don't always make the shot that you try for. The program lets you play, more or less, at the intermediate level. If you think that it allows you to play too well or too poorly, you could always change some of the random factors that determine how often a shot is missed.

Tennis was written by Victor Nahigian and David Ahl.

RUN

 TENNIS MATCH
CREATIVE COMPUTING, MORRISTOWN, NEW JERSEY

THERE ARE SEVERAL OPTIONS AVAILABLE TO YOU AS TO POSITION, PLACEMENT OF SHOT, AND SPEED (TYPE) OF SHOT. THE KEY THAT YOU WILL USE IS...

POSITION(PLACEMENT, TO): L.BACKCOURT(1);R.BACKCOURT(2); L. FORECOURT(3); R. FORECOURT(4).

SPEED (TYPE) OF SHOT: FAST-SLAM(S);SLOWLOB(L).

BACKHANDS AND FOREHANDS WILL MERELY BE ASSUMED AS YOU SHOOT FROM A CERTAIN SECTION OF THE COURT.

ON SERVES, YOU CANNOT HAVE PLACEMENT OPTIONS, BUT YOU WILL BE ABLE TO ALTER THE SPEED OF IT. BY THE WAY, YOU WILL BE ALLOWED TO SERVE FIRST IN ALL GAMES.

ARE YOU READY?... HERE WE GO!!!

```

This program inputs a line of characters from a Teletype, and then punches the shape of each letter on paper tape. This program can handle all of the letters and numbers and the space, but there is no reason why it could not be modified to handle various symbols also.

The operation of this program is fairly straightforward. After each character is converted to a number equivalent to its place in the alphabet (A=1, B=2, Z=26, space=27), a simple table look-up is performed to find the correct numbers to punch onto the tape. These numbers are stored in the DATA statements.

The original program was designed for a PDP-8; the one here runs in Microsoft Basic, however it would not be difficult to modify the program for virtually any Basic-speaking computer.

Written by Bill Gardner and Jim Larus, Tickertape first appeared in *Creative Computing*, May/June 1977.

TV Plot

This program automatically devises plots for television shows or series guaranteed to appeal to the masses and win high Nielsen ratings. By substituting appropriate words in the various parts of the program it could be easily modified for many other useful purposes such as devising names for new breakfast cereals, preparing PhD theses, or naming government agencies and their corresponding projects.

This program was originally written in FOCAL by Mary Cole and converted to BASIC by David Ahl.

RUN

TVPLOT
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS PROGRAM AUTOMATICALLY COMES UP WITH TELEVISION
SHOWS GUARANTEED TO APPEAL TO THE MASSES AND WIN
HIGH NEILSEN RATINGS.

HERE IS THE FIRST PLOT:

THE SPECIAL IS ABOUT A HILARIOUS LAWYER WHO IS A WHIZ AT
SOLVING CRIMES AND WHO STOPS THE FLOOD.

ANOTHER (YES OR NO)? YES

THE PROGRAM IS ABOUT A THOUGHTFUL COLLIE WHO IS A FLOP AT
HERDING ELEPHANTS AND WHO CONFESSES.

ANOTHER (YES OR NO)? YES

THE PROGRAM IS ABOUT A SENSITIVE SECRET AGENT WHO IS A WHIZ AT
TWO-FISTED DRINKING AND WHO STOPS THE FLOOD.

ANOTHER (YES OR NO)? YES

THE SPECIAL IS ABOUT A DEDICATED LITTLE BOY WHO IS A FLOP AT
COOKING HEALTH FOOD AND WHO HELPS THE DOG.

ANOTHER (YES OR NO)? YES

THE SERIES IS ABOUT A DODDERING LAWYER WHO IS A WHIZ AT
HERDING ELEPHANTS AND WHO STOPS THE FLOOD.

ANOTHER (YES OR NO)? YES

THE SPECIAL IS ABOUT A HENPECKED LAWYER WHO IS A FLOP AT
FIGHTING FIRES AND WHO DESTROYS THE CITY.

ANOTHER (YES OR NO)? YES

THE STORY IS ABOUT A SENSITIVE GIRL COWHAND WHO IS A FLOP AT
SOLVING CRIMES AND WHO RECOVERS THE JEWELS.

ANOTHER (YES OR NO)? NO

O.K. HOPE YOU HAVE A SUCCESSFUL TV SHOW!!
OK

Twonky

The computer will set up a 15x15 playing field in which you are randomly located. Also inside the field is an objective square, 30 blocked squares (walls), 22 relocation squares, and 1 super special new maze square, and, of course, the Twonky (which is no relation to a creme-filled cupcake).

To win the game, you must reach the objective square before the Twonky gets you, by moving one square at a time, forward, backward, right or left. Unfortunately, you are hindered by several things:

RELOCATION squares, when moved on, cause you to be randomly transported to another position in the maze.

WALLS; you can't move into these squares, and lose your turn when you hit one.

SUPER-MAZE-SQUARE; essentially an instant loss, since when you move here a completely new maze is set up.

TWONKY; after every move, the Twonky moves toward you. (He is impervious to all traps, even walls). When he gets too close to you (2 or fewer squares), you lose. However, you are equipped with a de-materializing ray gun. You have the option of using this on your turn. If you hit the Twonky he de-materializes and then re-materializes on a different square of the maze to resume his quest after you. (CAUTION: he could be dropped into your lap!).

After each move pair (you and Twonky), your distance from both the Twonky and the objective square are printed. There is no board printout — you play blind. However, using the distances, you can home in to the approximate position of both Twonky and objective.

When shooting at the Twonky, you do *not* have a shot if the distance he is from you is not an integer. For example: If the Twonky is 2.23606 units away, you don't have a direct shot. If he is 4 units away, you do have a shot. Exceptions to this rule are distances of 5, 10, 13, and 17. (A review of the Pythagorean Theorem will show why this is true.) Hence, if the distance is 5, 10, or 13 (but not 17), you may or may not have a direct shot. Likewise, this set of rules applies to the direction of the objective.

If you watch your distances before and after moving, you should be able to tell where the Twonky is in relation to you, e.g., forward and to the right, or backward and to the left. Take the distance you are from the Twonky, square it, say $2.23606^2 = 4.999998$ approx. = 5. Then find two integers that when squared and added together equal this (2 and 1). If the Twonky is forward and to the right, you now know that he is either up 2, over 1, or up 1, over 2.

The thing that makes Twonky unique, is that it can be played on two levels, one in which you play for fun, moving haphazardly; or you can play while figuring out exact positions, and calculating moves in advance for a challenging (as well as fun) game.

Twonky was written by Mark Capella and first appeared in *Creative Computing*, May/June 1977.

RUN

TWONKY
CREATIVE COMPUTING
MORRISTOWN NEW JERSEY

DO YOU WANT INSTRUCTIONS (Y/N)? Y

THIS IS THE GAME OF TWONKY.
YOU HAVE LANDED ON THE PLANET OF TWINKY AND
ITS KING (KONG: THEIR KING IS KING KONG) HAS
CAPTURED YOU. HE HAS PUT YOU IN A MAZE THAT IS
15 * 15 UNITS LONG. YOU ARE IN THE DARK AND CANNOT
SEE... YOU MUST GET TO THE OBJECTIVE SQUARE AND
BE SET FREE.

HAZARDS INCLUDE:
SQUARES THAT YOU CANNOT GO INTO (30).
SQUARES THAT RANDOMLY THROW YOU AROUND THE MAZE (22).
SQUARE THAT SETS UP A NEW MAZE AND ALL THAT'S IN IT (1)
MONSTER CALLED TWONKY THAT CHASES YOU AND WILL
ABSORB YOU IF THE DISTANCE IT IS FROM YOU FALLS
BELOW 2 UNITS.
TWONKY IS ALSO IMMUNE TO ALL TRAPS INCLUDING
WALLS.

YOU CAN:
MOVE ONE SQUARE AT A TIME TO FIND THE OBJECTIVE
OR ESCAPE FROM THE TWONKY.
SHOOT AT THE TWONKY ONE DIRECTION AT A TIME.
IF THE TWONKY IS HIT, HE WILL BE REPLACED IN THE
MAZE RANDOMLY.

IF THE TWONKY ABSORBS YOU... YOU LOSE.
IF YOU LAND ON THE OBJECTIVE SQUARE YOU WIN.

GOOD LUCK!

THE TWONKY IS 8.06226 UNITS AWAY.
THE OBJECTIVE IS 9.48683 UNITS AWAY.

Two-to-Ten

Two-to-Ten is a game of chance played with a special deck of cards with only the cards 2-10. The game is similar to blackjack in that you are drawing cards and trying to come as close as possible to a goal number (chosen at random before each round) without going over it. You must come within a certain number of points of the goal number determined by a "lucky-limit" card. The catch to the game is that you are not given the exact value of the goal number but rather a clue that is only within 15% of the goal.

Can you think of a way to make Two-to-Ten more interesting? Perhaps playing it against the computer as an opponent?

Two-to-Ten appeared in *Creative Computing*, Nov/Dec 1976.

TWO TO TEN
CREATIVE COMPUTING MORRISTOWN NEW JERSEY

WELCOME TO THE GAME OF TWO TO TEN. THAT NAME COMES FROM THE SPECIAL 'DECK OF CARDS' USED. THERE ARE NO FACE CARDS - ONLY THE CARDS 2-10. THIS GAME IS EASY AND FUN TO PLAY IF YOU UNDERSTAND WHAT YOU ARE DOING SO READ THE INSTRUCTIONS CAREFULLY.

AT THE START OF THE GAME, YOU BET ON WINNING. TYPE IN ANY NUMBER BETWEEN 0 AND 200. I THEN PICK A RANDOM NUMBER YOU ARE TO REACH BY THE SUM TOTAL OF MORE CARDS CHOSEN. BECAUSE OF THE RARE CHANCE OF YOU GETTING TO THAT NUMBER EXACTLY, YOU ARE GIVEN AN ALLOWANCE CARD. THE OBJECT OF THE GAME OF TO GET THE TOTAL OF CARDS WITHIN THE MYSTERY NUMBER WITHOUT GOING OVER.

YOU ARE GIVEN A HINT AS TO WHAT THE NUMBER IS. THIS IS NOT THE EXACT NUMBER ONLY ONE CLOSE. ALL YOU DO IN THIS GAME IS DECIDE WHEN TO STOP. AT THIS POINT YOUR TOTAL IS COMPARED WITH THE NUMBER AND YOUR WINNINGS ARE DETERMINED.

PLACE YOUR BET . . . YOU HAVE \$ 200 TO SPEND.? 50

YOUR 'LUCKY LIMIT' CARD IS A 8
YOU MUST COME WITHIN 8 WITHOUT GOING OVER TO WIN.

HERE WE GO

CARD # 1 IS A 3 .YOU ARE TRYING TO COME NEAR 28
YOUR TOTAL IS 3 DO YOU WANT TO CONTINUE? YES

CARD # 2 IS A 3 .YOU ARE TRYING TO COME NEAR 28
YOUR TOTAL IS 6 DO YOU WANT TO CONTINUE? YES

CARD # 3 IS A 9 .YOU ARE TRYING TO COME NEAR 28
YOUR TOTAL IS 15 DO YOU WANT TO CONTINUE? YES

CARD # 4 IS A 6 .YOU ARE TRYING TO COME NEAR 28
YOUR TOTAL IS 21 DO YOU WANT TO CONTINUE? YES

CARD # 5 IS A 10 .YOU ARE TRYING TO COME NEAR 28
YOUR TOTAL IS 31 DO YOU WANT TO CONTINUE? NO

YOU WIN! THE NUMBER WAS 32 YOUR GUESS TOTAL WAS 31
WITHIN YOUR LIMIT CARD.

YOU NOW HAVE \$ 250 IN CASH TO BET IN THE NEXT GAME!
WOULD YOU LIKE TO PLAY THE NEXT GAME? NO
HOPE YOU HAD FUN.

```

UFO is a strategy game in which you play against the computer in a life-and-death struggle for superiority of space. It takes place after a space war with another planet in which both earth and the attacker's planet are destroyed. Both planets—basically similar in strength, social structure, and scientific awareness—realizing they are doomed, launch a "lifeboat" into space. The lifeboats are equally armed and powered.

However, the aliens are much better marksmen, hitting once out of every two shots (in lines 880-890, the computer's odds are set). The reason is as follows. The enemy ship's decision is made by the program; the enemy will only retreat if he feels you are ramming and will approach only if you are running and/or his fuel is running out (smaller weaponry eats up less fuel). He will only use option 6 (no move but gains fuel) if his energy is below a certain point. In other words, you can think, while he cannot. You have the advantage of your mind, so the alien has been given the advantage of a good steady aim.

The game is set in the future: civilization is destroyed, 150 people are left, and you are in command. The enemy has never truly been seen, as many enemies are never truly seen, but nevertheless you must destroy him or be destroyed. Your weapons are explained and the game begins. In your command ship is a control which will not allow you to make an illegal move. This control waits after you fire for the shot to reach the other ship and for the explosion reports to reach the ship. It then gives a full report of power drain of both ships. If your power is not negative you are still in the game but once it drops below zero your crew dies (the energy level is the amount of energy left to counteract the attack. If more energy hits the ship than was repulsed, the ship is destroyed. If the amounts are equal then the ship had exactly the same amount of energy as the attack drained.) If in any game you can get close enough to your enemy to use your heavy guns without frightening off the enemy (5000-11000), the game will last for quite a long time. Theoretically this game will last forever if played logically.

Written by Raymond J. Kernay, UFO first appeared in *Creative Computing* in Jul/Aug 1977. A modified version called Star Wars appeared in Sep/Oct 1978.

Under & Over

This is a funny little dice game in which you're betting on the outcome of rolling two dice. You may bet on any number from two to twelve. If your number is exactly the same as shown on the sum of the dice, you win at four to one odds. If your number is under seven and the roll of the dice is under seven, you win even money. If your number is over seven and the roll of the dice is over seven, you also win even money. Only a bet on seven itself can win at four to one. The program goes on until you run out of money or until you interrupt it.

Van Gam

VAN GAM is a simple game with an interesting solution set. The winning sequence pairs are formed by certain mutually exclusive *sequences*, using the golden mean,

$$\frac{1 + \sqrt{5}}{2}$$

as an irrational generator. See explanation, lines 40-130.

$$IF T = \frac{1 + \sqrt{5}}{2}$$

$$and X = T + 1, Y = \frac{1}{T} + 1$$

then for integers N the winning sequence generators are

INT (N * X) 2 5 7 10 13

INT (N * Y) 1 3 4 6 8

It is interesting to note that the union of these sequences is the set of integers, and their intersection is empty. That is the case, in fact, for *any* irrational generator, but only T will produce winning VAN GAM pairs. The game is not much fun in that the average user will never be able to beat the computer in non-trivial cases, unless he has been taught the winning sequences.

This program by Alan Brown first appeared in *Creative Computing*, Jan/Feb 1978.

Warfish

In this game, you're the commander of an American submarine with a mission to seek out and destroy as many Japanese ships as possible during World War II.

You may up your periscope to search for Japanese ships, you may launch your torpedoes, or you may dive to avoid Japanese ships that are attacking you.

For the most part, this is a game of random probabilities. To make it more interesting, you might wish to introduce a skill factor in terms of aiming your submarine or distance away from an enemy ship, size of the enemy ship, and so on.

Warfish was written by Randy Wit.

RUN

WARFISH
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

DO YOU DESIRE THE RULES OF WARFISH ? YES

YOU COMMAND AN AMERICAN SUBMARINE THAT BEEN SENT OUT
TO ATTACK JAPANESE SHIPS AT SEA DURING WORLD WAR TWO

THE ORDERS THAT CAN BE GIVEN ARE THE FOLLOWING:
PERISCOPE - TO SEARCH FOR JAPANESE SHIPS
TORPEDO - TO LAUNCH TORPEDOES AT JAPANESE SHIPS
DIVE - TO ESCAPE JAPANESE SHIPS THAT ARE ATTACKING

THESE ARE SOME HISTORIC U.S. NAVY SUBMARINES -
TAUTOG, SILVERSIDES, CAVALLA, BLUEFISH, THRESHER
SWORDFISH, FLASHER, TROUT, ARCHER
SELECT ONE OF THE ABOVE, OR USE A NAME OF YOUR CHOICE
PRINT THE NAME OF YOUR SUBMARINE ? TROUT

JAPANESE TORPEDO BOAT IS ATTACKING

Word Search Puzzle

This program generates the immensely popular word-search puzzles containing names of Presidents, states, types of animals, fish, and every manner of objects. It asks you the length and width of the puzzle you wish generated and then the number of words to be hidden in the puzzle. As the instructions note, occasionally the computer may find that it can't hide a particular word in the puzzle and will ask you if it should start over or if you want that particular word deleted. If you start over, try giving it fewer words or larger puzzle dimensions. The program hides the words fairly efficiently although you can usually improve on it slightly when you get the final puzzle out. Since you're probably just using this program for fun, it's generally more than adequate.

This word search puzzle generator was originated by Leor Zolman.

RUN

WORD SEARCH PUZZLE
CREATIVE COMPUTING
MORRISTOWN, NEW JERSEY

THIS PROGRAM IS A WORD SEARCH PUZZLE GENERATOR!!
THE PROGRAM TAKES A SET OF INPUT STRINGS, PURGES ALL
NON-ALPHABETIC CHARACTERS OUT OF THEM, AND INCORPORATES
THEM INTO A WORD SEARCH PUZZLE.

IN THE COURSE OF MAKING THE PUZZLE, THE MACHINE MAY
FIND THAT IT CAN'T PUT A PARTICULAR WORD ANYWHERE, AND
SO WILL ASK YOU IF IT SHOULD START THE WHOLE PUZZLE
OVER. IF YOU DON'T WANT IT TO START OVER, TYPING 'NO'
WILL THROW AWAY THAT PARTICULAR WORD. IF THIS PERSISTS,
TRY EITHER GIVING LESS WORDS OR BIGGER PUZZLE DIMENSIONS!

HOW MANY COLUMNS DOES YOUR PRINTER HAVE? 72
DO YOU WANT A SOLUTION PRINTOUT? YES
WHAT IS TO BE THE WIDTH OF THE PUZZLE? 15
THE LENGTH? 15
WHAT IS THE MAXIMUM NUMBER OF WORDS IN THE PUZZLE? 10

NOW ENTER A HEADING THAT WILL BE PRINTED OVER THE PUZZLE:
(72 CHARACTERS MAXIMUM!)

? COMPUTER LANGUAGES

OK . . . ENTER A WORD AT EACH QUESTION MARK.

TO REDO THE PREVIOUS WORD, TYPE A HYPHEN (-).

WHEN YOU RUN OUT OF WORDS, TYPE A PERIOD (.).

Wumpus I

The Genesis of Wumpus

Two years ago I happened by People's Computer Company (PCC) and saw some of their computer games — such as Hurtle, Snark, and Mugwump. My reaction was: "EECH!!" Each of these games was based on a 10 x 10 grid in Cartesian co-ordinates and three of them was too much for me. I started to think along the lines of: "There has to be a hide and seek computer game without that (exp. deleted) grid!!" In fact, why not a topological computer game — imagine a set of points connected in some way and the player moves about the set via the interconnections.

That afternoon in meditation the phrase "Hunt the Wumpus" arrived, and Wumpus was born. He's still a bit vague in physical detail as most dedicated Wumpus hunters know, but appearances are part of the game. (If you like, send me a picture of your version of a Wumpus. Perhaps friendly Dave, our editor, will publish the best one in *Creative Computing*.) The grid I chose was the vertices of a dodecahedron — simply because it's my favorite Platonic solid and once, ages ago, I made a kite shaped like one. The edges became the connecting tunnels between the caves which were the set of points for the game.

My basic idea at this time was for the player to approach the Wumpus, back off, and come up to him by going around the dodecahedron. To my knowledge, this has never happened . . . most players adopt other strategies rather than this cold-blooded approach.

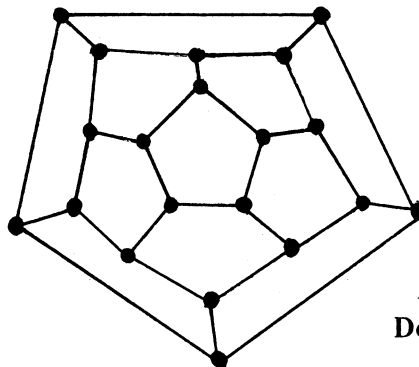

Anyway . . . how to get the Wumpus! How about an arrow which could turn corners as it goes from room to room. Let the hunter tell the arrow where to go and let it fly. The shortest round trip without reversals is 5 caves — and thus the Crooked Arrow.

Hmmm . . . How does one sense the Wumpus? It's dark in yonder cave, and light would wake him up. If one got one cave away, the wumpus's distinct smell would serve as a warning. So far, so good . . . but Wumpus is still too easy, so let's find some appropriate hazards for the caves.

Bottomless pits were easy. Any imaginary cave would have a few of those around the place. Superbats were harder to come by. It took me a day or two to get that idea. The Superbats are a sort of rapid transit system gone a little batty (sorry about that one). They take you a random distance to a random cave and leave you there. If that's a pit or a Wumpus, well, you are in Fate's hands.

Around this time, I saw that Map-making would be a regular activity of Wumpus-hunters. I numbered the caves and made the scheme fixed in the hopes a practised player might notice this and make himself a permanent map of the caverns. (Another unrealised hope — as an exercise, make yourself such a map on a Squashed Dodecahedron).

To start the game fairly, Wumpus, Hazards, and Hunter are located on different points at the start of the game. Each game starts with random choices of location, but the

A Squashed
Dodecahedron

hunter may restart with the same set-up if he chooses. This allows re-plays if the hunter, say, fell into a pit on the first move.

Wumpus was nearly done in my mind . . . (hint to a games-writer: Have a clear notion of your game before you start coding it. This saves MUCH confusion.) yet I felt it was a bit dull. Once you found the Wumpus all you had to do was shoot it. To fix this, the Wumpus was given a little life. If you shot an arrow or moved into his cave, he woke up and chose to move to a neighboring room or to the same room (one of 4 choices). If you and the Wumpus were in the same room after he moved, he ATE YOU UP!!

Around here I noticed that the pits and the bats didn't affect the Wumpus. To explain this, I added some color by making him heavy and with the legendary sucker feet. After all, evolution works in strange ways!! If you are a Wumpus fiend, make a version of Wumpus in which he avoids pits and superbats can carry him only one room (with the possibility of being dumped into your cave). This can be done by making the wumpus moving procedure a subroutine.

I wrote Wumpus and dropped it off at PCC. Then I went home and dreamed up Wumpus 2.

The Birth of Wumpus

Around a month later, I went to the Synergy conference at Stanford, where many of the far-out folk were gathered to share their visions of improving the world. PCC had a few terminals running in a conference room and I dropped by. To my vast surprise, all of the terminals were running Wumpus and scraps of paper on the floor with scrawled numbers and lines testified that much dedicated Wumpus-hunting was in progress. I had spawned a hit computer game!!!

Later, PCC published Wumpus in its newsletter, and *Creative Computing* published it in their Sep/Oct 1975 issue.

Wumpus and this writeup are the products of the talented and creative Gregory Yob.

CREATIVE COMPUTING MORRISTOWN, NEW JERSEY

INSTRUCTIONS (Y-N)? Y

WELCOME TO 'HUNT THE WUMPUS'

THE WUMPUS LIVES IN A CAVE OF 20 ROOMS. EACH ROOM HAS 3 TUNNELS LEADING TO OTHER ROOMS. (LOOK AT A DODECAHEDRON TO SEE HOW THIS WORKS-IF YOU DON'T KNOW WHAT A DODECHADRON IS, ASK SOMEONE)

HAZARDS:

BOTTOMLESS PITS - TWO ROOMS HAVE BOTTOMLESS PITS IN THEM
IF YOU GO THERE, YOU FALL INTO THE PIT (& LOSE!)

SUPERBATS - TWO OTHER ROOMS HAVE SUPER BATS. IF YOU

GO THERE, A BAT GRABS YOU AND TAKES YOU TO SOME OTHER ROOM AT RANDOM. (WHICH MIGHT BE TROUBLESOME)

WUMPUS:

THE WUMPUS IS NOT BOTHERED BY THE HAZARDS (HE HAS SUCKER FEET AND IS TOO BIG FOR A BAT TO LIFT). USUALLY HE IS ASLEEP. TWO THINGS THAT WAKE HIM UP: YOUR ENTERING HIS ROOM OR YOUR SHOOTING AN ARROW.

IF THE WUMPUS WAKES, HE MOVES (P=.75) ONE ROOM OR STAYS STILL (P=.25). AFTER THAT, IF HE IS WHERE YOU ARE, HE EATS YOU UP (& YOU LOSE!)

YOU:

EACH TURN YOU MAY MOVE OR SHOOT A CROOKED ARROW

MOVING: YOU CAN GO ONE ROOM (THRU ONE TUNNEL)

ARROWS: YOU HAVE 5 ARROWS. YOU LOSE WHEN YOU RUN OUT.

EACH ARROW CAN GO FROM 1 TO 5 ROOMS. YOU AIM BY TELLING

THE COMPUTER THE ROOMS YOU WANT THE ARROW TO GO TO.

IF THE ARROW CAN'T GO THAT WAY (IE NO TUNNEL) IT MOVES

AT RANDOM TO THE NEXT ROOM.

IF THE ARROW HITS THE WUMPUS, YOU WIN.

IF THE ARROW HITS YOU, YOU LOSE.

WARNINGS:

WHEN YOU ARE ONE ROOM AWAY FROM WUMPUS OR HAZARD,
THE COMPUTER SAYS:

WUMPUS- 'I SMELL A WUMPUS'

BAT - 'BATS NEARBY'

PIT - 'I FEEL A DRAFT'

Wumpus 2

Hark!! The weary Wumpus hunter, wan from 50 days in the Terminal Caverns, exhausted and with all of his arrows expended — — — (A groaning Teletype roars at a sleepy student. Maps litter the floor covered with circles and integers. With callused fingers, the immortal Wumpus player looks up with bloodshot eyes and implores: "How do I get out of here?")

I suspected that the dodecahedron may prove a bit boring after a few thousand games, so I wrote Wumpus 2 to extend your pleasure. Some of the more mathematical minded may have noticed there are lots of ways to link caves with three tunnels apiece. Some of these patterns are topologically interesting . . .

Wumpus 2 is the same old Wumpus in different settings — including those of your own design. As you play in the different caves, you will notice that the game changes in difficulty and strategy. Now to a description of the various caves in Wumpus 2.

CAVE 0 (Dodecahedron)

This is the same old Wumpus with which you are familiar.

CAVE 1 (Mobius Strip)

Since my original vision was topological, here is the first wonder of topology, the Mobius strip. Take a strip of paper, give it a half-twist and join the ends into a loop. The result has just one side and one edge (if you disbelieve, take a pencil and go around the thing).

A perceptive player will note that the placement of the pits influence the game. Two pits placed just right (around 5% of the games have this) will force a detour back around the strip in certain cases. Getting around is slower than in Cave 0, but it is easier to search the place.

CAVE 2 (String of Beads)

See the diagram for this one. Here, placement of the pits will often make parts of the caves inaccessible except by bat-express. (Can you see why?) Play in this cave is frustrating until you have gone to the trouble of making a reference map; otherwise you keep coming back to your starting point. (Look at the diagram and see how this may be so.)

CAVE 3 (Hex Network)

This is my attempt at a torus (doughnut). If you can visualise a hexagon net like a honeycomb or a tile floor and stretch it onto a doughnut, you've got it!! The drawing tries to show this, but if you prefer, think of it as a complicated molecule of some sort. Play in this one is very similar to CAVE 0.

CAVE 4 (Dendrite)

Up to now, each tunnel leads to another cave and only one tunnel connects a pair of caves. This need not be a strict rule and the next two caves illustrate variations on this. The dendrite is a branching pattern like a tree or a plant. At the ends of the plant are "leaves" which are caves leading to themselves or multiple tunnels. This cave is especially susceptible to severance by pits and getting stuck in corners near the wumpus. A nice thing is that you often will know exactly where the Wumpus is when you come near him.

CAVE 5 (one way streets)

This is the extreme example of all tunnels are one-way. You will find that getting about this cave is like travel in Los Angeles — much going to get to the neighbor's house. If you overshoot, you must travel all the way around, just like missing a freeway offramp.

CAVE 6 (Do Your OWN)

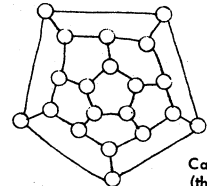

Draw up a map of caves, each cave with tunnels GOING TO three (exactly three) caves (same or different). Then the computer will ask you for the numbers of the destination tunnels for each of the 20 caves in Wumpus. When you have it entered, play Wumpus on your own caves. Let me know of your favorite ones, and your most frustrating ones!!!

FINIS

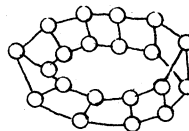

In any case, Wumpus has spawned several versions and spread about the computer games-dom really nicely. For myself, the soul of the game is in the idea and fun of it rather than the program or the computer which hosts it. I feel that all really good games will turn programmers on enough for them to write it for their system from the idea alone and encourage games writers to think carefully on the art and esthetics of their games before writing a line of code.

Wumpus-2 and this description are products of Gregory Yob. They appeared previously in *Creative Computing*, Jan/Feb 1976 and the game in *People's Computer Co.*

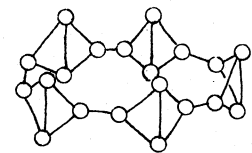

THE CAVES OF WUMPUS 2

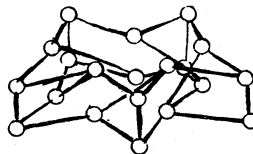

Cave 0
(the usual)

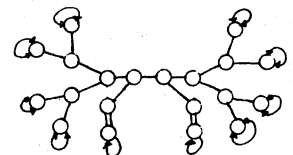

Cave 1
(Mobius Strip)

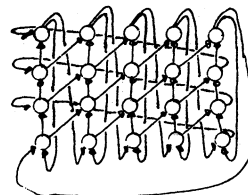

Cave 2
(String of Beads)

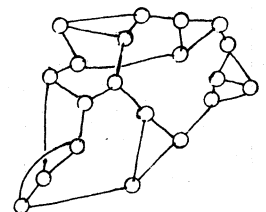

Cave 3
(Toroidal Hex Net)

Cave 4
(Dendrite)

Cave 5
(One Way Only)

Cave 6
(Anything You Like)

RUN

WUMPUS 2
CREATIVE COMPUTING
MORRISTOWN NEW JERSEY

INSTRUCTIONS? YES

WELCOME TO WUMPUS II

THIS VERSION HAS THE SAME RULES AS 'HUNT THE WUMPUS'.
HOWEVER, YOU NOW HAVE A CHOICE OF CAVES TO PLAY IN.
SOME CAVES ARE EASIER THAN OTHERS. ALL CAVES HAVE 20
ROOMS AND 3 TUNNELS LEADING FROM ONE ROOM TO OTHER ROOMS.
THE CAVES ARE:

- 0 - DODECAHEDRON THE ROOMS OF THIS CAVE ARE ON A
12-SIDED OBJECT, EACH FORMING A PENTAGON.
THE ROOMS ARE AT THE CORNERS OF THE PENTAGONS.
EACH ROOM HAVING TUNNELS THAT LEAD TO 3 OTHER ROOMS
- 1 - MOBIUS STRIP THIS CAVE IS TWO ROOMS
WIDE AND 10 ROOMS AROUND (LIKE A BELT)
YOU WILL NOTICE THERE IS A HALF TWIST
SOMEWHERE.
- 2 - STRING OF BEADS FIVE BEADS IN A CIRCLE.
EACH BEAD IS A DIAMOND WITH A VERTICAL
CROSS-BAR. THE RIGHT & LEFT CORNERS LEAD
TO NEIGHBORING BEADS. (THIS ONE IS DIFFICULT
TO PLAY)
- 3 - HEX NETWORK IMAGINE A HEX TILE FLOOR. TAKE
A RECTANGLE WITH 20 POINTS (INTERSECTIONS)
INSIDE (4X4). JOIN RIGHT & LEFT SIDES TO MAKE A
CYLINDER. THEN JOIN TOP & BOTTOM TO FORM A
TORUS (DOUGHNUT).
HAVE FUN IMAGINING THIS ONE!!

CAVES 1-3 ARE REGULAR IN A SENSE THAT EACH ROOM
GOES TO THREE OTHER ROOMS & TUNNELS ALLOW TWO-
WAY TRAFFIC. HERE ARE SOME 'IRREGULAR' CAVES:

- 4 - DENDRITE WITH DEGENERACIES PULL A PLANT FROM
THE GROUND. THE ROOTS & BRANCHES FORM A
DENDRITE - IE., THERE ARE NO LOOPING PATHS
DEGENERACY MEANS A) SOME ROOMS CONNECT TO
THEMSELVES AND B) SOME ROOMS HAVE MORE THAN ONE
TUNNEL TO THE SAME OTHER ROOM IE, 12 HAS
TWO TUNNELS TO 13.
- 5 - ONE WAY LATTICE HERE ALL TUNNELS GO ONE
WAY ONLY. TO RETURN, YOU MUST GO AROUND THE CAVE
(ABOUT 5 MOVES).
- 6 - ENTER YOUR OWN CAVE THE COMPUTER WILL ASK YOU
THE ROOMS NEXT TO EACH ROOM IN THE CAVE.
FOR EXAMPLE:
ROOM #1 ? 2,3,4 - YOUR REPLY OF 2,3,4
MEANS ROOM 1 HAS TUNNELS GOING TO ROOMS:
2, 3, & 4.

HAPPY HUNTING!
CAVE #(0-6) ? 4

HUNT THE WUMPUS

I SMELL A WUMPUS!

BATS NEARBY!

YOU ARE IN ROOM 11 TUNNELS LEAD TO 13 14 12

SHOOT OR MOVE ? S

NO. OF ROOMS ? 1

ROOM #? 13

MISSED

SHOOT OR MOVE ? M

WHERE TO ? 13

ZAP--SUPER BAT SNATCH! ELSEWHEREVILLE FOR YOU!

YOU ARE IN ROOM 6 TUNNELS LEAD TO 4 7 5

SHOOT OR MOVE ? M

WHERE TO ? 4

BATS NEARBY!

YOU ARE IN ROOM 4 TUNNELS LEAD TO 4 6 1

SHOOT OR MOVE ? M

WHERE TO ? 4

BATS NEARBY!

YOU ARE IN ROOM 4 TUNNELS LEAD TO 4 6 1

SHOOT OR MOVE ? M

WHERE TO ? 6

YOU ARE IN ROOM 6 TUNNELS LEAD TO 4 7 5

SHOOT OR MOVE ? M

WHERE TO ? 5

YOU ARE IN ROOM 5 TUNNELS LEAD TO 2 7 3

SHOOT OR MOVE ? M

WHERE TO ? 2

YOU ARE IN ROOM 2 TUNNELS LEAD TO 2 5 3

SHOOT OR MOVE ? M

WHERE TO ? 3

YOU ARE IN ROOM 3 TUNNELS LEAD TO 3 6 4

SHOOT OR MOVE ? M

WHERE TO ? 6

YOU ARE IN ROOM 6 TUNNELS LEAD TO 4 7 5

SHOOT OR MOVE ? M

WHERE TO ? 7

YOU ARE IN ROOM 7 TUNNELS LEAD TO 6 10 8

SHOOT OR MOVE ? M

WHERE TO ? 10

I FEEL A DRAFT!

YOU ARE IN ROOM 10 TUNNELS LEAD TO 9 11 10

SHOOT OR MOVE ? M

WHERE TO ? 11

I SMELL A WUMPUS!

BATS NEARBY!

YOU ARE IN ROOM 11 TUNNELS LEAD TO 13 14 12

SHOOT OR MOVE ? S

NO. OF ROOMS ? 1

ROOM #? 12

AHA! YOU GOT THE WUMPUS! HE WAS IN ROOM 12
HEE HEE HEE - THE WUMPUS'LL GET YOU NEXT TIME!!
PLAY AGAIN? NO

OK

```

#1 in Software
and Applications

Software and Applications. Pragmatic, well-documented programs with complete listings on data base systems, word processing, communications, simulations, investment analysis, games, music synthesis, computer art, business functions, building control and more.

System Evaluations. In-depth, probing evaluations of personal and small business systems every issue. No-nonsense reviews of software from independents as well as the majors.

Regular Features. Operating Systems Q and A. Columns on the TRS-80, Apple and PET. Book reviews. Programming techniques. Short programs. Computer games. New products. Even a dose of fiction and foolishness.

We guarantee that Creative Computing will help you get more out of your personal, school, or business computer or we'll give you your money back!

MORE

MICROCOMPUTER GAMES

From the editor of the best-selling book *Basic Computer Games*

84 mind-bending games for one or MORE players.
Easy to use on any computer.

Chuck-a-Luck, Four in a Row, Wumpus, Seabattle,
Life Expectancy, Dodgem, Grand Prix, TV Plot, MORE.

This book is for scholars and hackers and even MORE—for friends and the whole family, even little kids. Trek across the desert. Evade a man-eating rabbit. Become a millionaire. Step-by-step programs and sample runs on Microsoft Basic, with conversion table.

Who could ask for MORE? Everyone. Begin.

David H. Ahl, editor of *Basic Computer Games* and *More Basic Computer Games*, is founder and publisher of *Creative Computing*, the magazine of computer applications and software.

ABOUT BASIC COMPUTER GAMES:

“For game addicts, one of the best resources for computer fun.”

—Michael Donner, Editor, *Games* magazine

“An important achievement and a very useful pioneering effort in establishing the value of computer games.”

—Dr. Robert Taylor, Computer Center, Columbia University

“Home computer enthusiasts cannot do without this book. A must.”

—Gary Bitter, Professor of Education, Arizona State University
