Cassette Mailing List System

Cat. No. 26-1503

Suggested Retail Price (may vary at individual stores and dealers) \$19.95

Description

The cassette version of Radio Shack's Mailing List System is a RAM-based Level II program which builds and maintains a list of names. You can review, edit, delete, or add to your list, and if your system is equipped with a TRS-80 tractor-feed line printer, you can print labels. Programs and all names are read from cassette into memory. 16K RAM (minimum) is required.

Information stored includes:

- | | |
|------------------------------|---------------------------|
| 1. Name | 4. City |
| 2. Company Name or Phone No. | 5. State |
| 3. Street Address | 6. Zip Code |
| | 7. Select Code (Optional) |

You can choose to print labels for everyone on your list, or you may use any of the seven items above as a "key" to print selectively. For example, only those in New York, or only those whose zip code starts with "761" or, using the optional "select code," only lawyers, or club members whose dues are overdue. Flexibility of the system is outstanding, and the possibilities for office, business, club, or even individual use are almost endless.

Format

The cassette program is packaged in a binder with one program cassette, one C-20 blank data cassette and manual.

Minimum Hardware Required

- Level II TRS-80 with 16K RAM
And if Labels are to be Printed . . .
 - TRS-80 Line Printer I or III with Printer Interface Cable 26-1411
- NOTE: Labels are available from Radio Shack, Cat. No. 26-1404

NOTE: Labels are available from Radio Shack, Cat. No. 26-1404

Limitations

- Number of Names — Total list limited only by the number of cassette tapes.
- Number of names which can be processed in 16K memory at one time will vary from 80 to 150 depending on the number of characters in each listing. Of course, more memory (in the Expansion Interface) allows processing of more names at one time.
