

# In-Memory Information System

Cat. No. 26-1502

Suggested Retail Price (may vary at individual stores and dealers) \$19

## Description

The Radio Shack In-Memory Information System is a fast machine-language program which allows you to create, save, retrieve, modify, and sort any type of data. Data can be made up of any characters: letters, numbers, special characters or any key on the keyboard. Data can consist of names, salaries, stock numbers or any other type of information you wish to use.

## Format

The In-Memory Information Package comes in a three-ring binder with three programs, a blank data tape and manual.

## Minimum Hardware Required

- 4K TRS-80 Computer System
- Level I or Level II

## Detailed Description

The In-memory Information System consists of three programs:

Initialization — This program sets up your file structure. It is used to create your initial data tape.

Sort — This program sorts your information into alphabetic or numeric order.

Update & Retrieval — allows you to look at, delete, change, or add to your data. After changes are made you create a new data tape.
