

RADIO SHACK TRS-80[™] SOFTWARE LIBRARY Profile

Cat. No. 26-1562

Suggested Retail Price (may vary at individual stores and dealers) \$79.95

Description

PROFILE is designed to allow you to create your own filing system. The organization of the records may take any form you desire.

Format

The program is supplied with one program diskette and a complete manual in a deluxe three-ring binder.

Minimum Hardware Requirements

- 16K Level II TRS-80 Computer System
- Expansion Interface
- One TRS-80 Model I Disk Drive
- Optional printer (You specify form to be printed so any width printer will work)

Detailed Description

You may design your own screen and printer formats to fit your needs.

Features of Profile include:

- Variable Record Lengths from 1 to 255 Bytes
- Repeat keys
- Data may be Added, Deleted, Retrieved, or Edited at will
- Information may be sorted on any field in ascending or descending order

Imagine being able to organize information the way YOU want it! If you want the Name field for a mailing list to be in the upper right corner PUT IT THERE! If you prefer the Name field to be in the middle of the screen PUT IT THERE! YOU decide how many fields will be used, how long each field will be, and what each field will be called. No complicated formulas to mess with—you simply type what you want, where you want it. If you are half-way through designing your form and decide you do not like it CHANGE IT! Once YOU are satisfied, the computer will store the information it needs to recreate YOUR display whenever it is needed.

When you are ready to print your information, you may not want it in the same order as you have it on the screen, or you may want to print part of the information, or you may want to rename fields. DO IT! Again you have complete freedom to design your printout to match your needs. Again the computer will store your format so you can use it again. The next time you want to print something, the computer will give you the option of using the old format, or creating a new format. Again you have complete control of what will be printed, in what order, and with what titles.

Profile is incredibly versatile. You can sort the entire data base on any field, in either ascending or descending order. You can search on any field for an item or group of items which fit a qualification you define, or you can page through the material sequentially either forward or reverse. If you have at least two Disk drives, you can access the Profile data files from BASIC using either sequential or random access techniques.
