

TRS-80 SPEEDUP BOARD

You don't have to spend \$3,500 on a TRS-80 Model II to get faster computing. Now you can speedup your level II TRS-80 - disk systems included - by up to 100%. The results are more animated graphics, shorter program run times, and generally far greater computing power for your dollar. Buy the most versatile, easiest to install, and most publicly acclaimed speed mod on the market today.

Software controlled - change between normal and faster operation using BASIC statement OUT 254 (switches are not required, however, a switch may be added if manual speed selection is desired) * Changes are provided for NEWDOS, DOS 2.2, and DOS 2.3 that allow disk systems to run reliably at both the normal and the accelerated rates * Low current drain prevents power supply overloading * The speedup board guarantees a minimum speed increase of 50% with most systems capable of running 100% faster * Board size - 1.5" X 2.5"

"The best part of (Archbold's) circuit is the fact that speed changes are handled in software...(it) is a worthwhile modification for the TRS-80..." Rod Hallen, associate Editor, Kilobaud MICROCOMPUTING

"The board comes fully (and beautifully!) assembled... instructions are clear and detailed." Bill McLaughlin, Editor, CIE TRS-80 Bulletin (circulation 50,000+)

REVERSE VIDEO

REVERSE VIDEO is finally here! If you're tired of going blurry-eyed looking at your video display, then you are ready for reverse video. It provides dark black characters and graphics on an all white screen for a much crisper and easier to read presentation. Change between normal and reverse by simultaneously pressing a combination of three keys on the keyboard.
