

A person's work is never done...

There are 20 decks, running double speed, spewing out over 125 CLOAD clones an hour. There's a 4-drive Model III dumping a CLOAD disk every minute. Two printers are vying for the cassette label print record. Who's in control of all this? Obviously nobody. But Rose is in the back room valiantly trying to stem the tide. What!? Did I just hear a muffled scream? Looks like we'll have help her, after we dig her out from under the cassette pile...

*	Tape CLOADing Notes - This tape may load at an ODD RECORDER VOLUME. Set the volume LOWER than normal for your first attempt, then increase it slightly until the tape loads. If the first copy of a program won't load, try the second. That is why it is there. Model I only: Put an AM radio very close to the keyboard, tune it to a non-station, and you can listen to the tape loading in. Adjust the recorder volume so the hash from the computer sounds 'cleanest' during a load. Model III only: Load the tapes at the LOW speed (POKE 10915,0).					
*						
*	Subscribers - The month on the mail label is the last month of your subscription. If you have a cassette subscription, the number next to the month is the amount it would cost to convert the rest of your subscription to the disk version (\$4.20 per issue for 6 or less months, \$3.75 per issue if more than 6 months).

Extra, Extra! Actually, it's not extra, but News Cover does have a warped outlook on current events that appeals to us.

Dos, the spanish word for two. A cute way to lead into the two programs for DOS users - Menu (for the standard Model III TRSDOS) and Select (for the standard Model I TRSDOS). These programs read the directory of a disk in drive 0 and display it on the screen in menu format. All you have to do is hit the letter or number corresponding to a program and that program will run (BASIC will be automatically loaded if needed).

Menu notes: If you have PATCHed your system disk so that you are always prompted for 'CASS?' whenever you access BASIC, the cursor gets printed all over the screen when a BASIC program is run through Menu. So do not PATCH (or unPATCH already PATCHed) system disks that you want to use Menu on.

Select notes: The first time you run Select, you will be asked to DUMP a machine language routine (POKEd in by Select) to your disk. From then on, you type SELECT<enter> from DOS to run it.

Interest is dropping (talk about short attention spans...)! Time to do a Loan Amortization. Note: You can dump the info to a printer

after it has been displayed on the screen.

The Slimes have invaded the Reactor (is this a paid political announcement?). Your job is to get the fuel canisters out of the reactor while avoiding the Slimes. My job is to watch...

Straight from Spock - Logic Trainer. This program teaches you a little about logic circuits; those combinations of AND, OR, NOR, NAND, XOR, and XNOR gates that make up much of your TRS-80. Just to wet your appetite, logic circuits accept high or low voltages (1's or 0's) as input, and output a high or low voltage (1 or a 0) depending on the arrangement of the circuit. Bit bustin' (thanks to Jesse Bob of the Alternate Source) at the bit's birthplace...

You can't win, but it's fun to see how long you can avoid the swarmers in Swarm. To load Swarm, type SYSTEM<enter> and answer the \*? with SWARM<enter>. When the program has loaded, just type /<enter> to play. Notes: Swarm has sound, so connect the large grey AUX recorder plug to an amplifier. The start, end, and execute addresses are 18128, 22549, and 22521. If you have a disk system, you'll have to run Swarm through a program like August 1981's Disk Exec to run it from disk.

Disk versioners: Swarm is on your disk twice. Once with the '/EXE' extension (that runs from the AWAY menu or from Disk Exec), and once with the '/CMD' extension (in case you have a program or DOS that will run it as it is).

Getting small... Shrink takes unnecessary spaces and REMs out of a BASIC program. The 'REM' itself is not touched and DATA statements are left alone. To load Shrink, type SYSTEM<enter> and answer the \*? with SHRINK<enter>. When the \*? appears again, type /32669 and your BASIC program will be shrunk. If you wish to use Shrink a lot and don't want to load it every time, just set the Memory Size to 32668 to protect it.

Shrinking notes: This program will not work on a disk system. Also, after shrinking a program I have had the computer crash when I typed a direct command in incorrectly (ie: LITS instead of LIST). So I recommend saving the program to tape immediately after shrinking, just in case...

Just a bit (the 7th)...

Last month's Air Nav gained a bit in line 64. If you look about 1/4 of the way through the line you'll see BBGET. Well, until our Model I got ahold of it for the 'final time', it used to be BB\$. So fix it! The \$ ASCII value is 36 (in binary 00100100), and the keyword GET has an ASCII value of 164 (10100100). So the copy we used to create the tapes had a bit turned on that shouldn't have been. Sorry...

Pokin' at the printer...

You can direct the next PRINT statement in a program to go to a printer by executing a POKE 16540,1. Remember, this will ONLY direct the output of the next PRINT statement encountered. Subsequent PRINT statements will go to the screen. If you do a POKE 16540,0, the PRINT goes to the screen as usual. Where would this be valuable? How about if you were writing instructions for a program, and you wanted to give the user the option of sending them to the screen or to a printer? You would have to have one set of instructions preceded by PRINT, and another almost identical set preceded by LPRINT. Or you could do something like the following:

```

10 PRINT "Instructions to a printer (Y/N)? ";
20 A$=INKEY$: IF A$="" THEN 20 ELSE PRINT A$: REM GET ANSWER
30 IF A$="Y" THEN PR=1 ELSE PR=0: REM PR DIRECTS OUTPUT
40 POKE 16540,PR: PRINT TAB(21);"Instructions for BLAT"
50 IF PR LPRINT ELSE PRINT: REM EASIER TO PRINT BLANK LINES
60 POKE 16540,PR: PRINT "  The object of BLAT is to avoid paying...
.
.
150 IF PR=0 GOSUB 1000: REM GET NEXT SCREENFUL IF NOT PRINTING
.
.
1000 INPUT "READY FOR NEXT PAGE";Q$: CLS: RETURN

```

Make it quick...

Many programs would be better if they ran faster, especially real-time BASIC games. There are many ways to speed up BASIC programs (declaring variables as integers, using variables instead of constants, etc.), but one way that is not used often but is VERY effective is to declare variables in the order that they are most often used.

Every time your TRS-80 encounters a new variable in a BASIC program, it makes a space for it at the END of the variable list. Then each time it encounters the variable in the program again, it searches linearly (starting from the top) down the list until it finds the space originally created for it. In a large program with lots of variables, it can take quite a while if an often-used variable is at the end of the list.

So you should declare variables (through a psuedo DIM statement) with the most used variable declared first. Step right over here and I'll show you what I mean. The following program shows what percentage of the time a random number from 1 to the loop limit equals the loop counter. As you can see, the variables A thru V are declared first (and they are used once each). The loop counter, Z, is used twice EACH TIME THROUGH THE LOOP (2000 times in our example). The loop limit, Y, is used once each time through the loop. W is used twice and X is used once each time the IF is true:

```

20 A=0:B=0:C=0:D=0:E=0:F=0:G=0:H=0:I=0:J=0:K=0:L=0:
   M=0:N=0:O=0:P=0:Q=0:R=0:S=0:T=0:U=0:V=0
30 X=1:Y=1000:W=0
40 FOR Z=X TO Y
50 IF RND(Y)=Z THEN W=W+X
60 NEXT
70 PRINT W/Y*100

```

This program took 17 seconds to run. However, let's add line 10:

```

10 DIM Z,Y,W,X      (Yes, it's a legal statement)

```

Now we have put the variables most accessed at the top of the variable list by forcing the BASIC interpreter to find room for them first. Rerunning the program takes 12 1/2 seconds, a time savings of about 25%! The tricky part (in using this technique in your own programs) is deciding which variables from your program are to be declared first (ie: which program sections need speeding up and which variables in those sections are used the most).

Off to the races, *Dave*

## HIGH CLASS PROGRAMS (on tape or disk) AT POOR MAN PRICES

Get 12 tapes or disks a year containing over 75 quality programs — and pull ahead of the Joneses without joining the prodigal sons.

A subscription to **CLOAD Magazine** (tape or disk) consists of 6 to 8 ready-to-load programs delivered by First Class Mail every month. Programs like CIA Adventure, Disk Mail, PILOT, Trend Calc, Pac Mania, Keyplus, and Stellar Empire.

No need to beg for a good software meal — Get a subscription to **CLOAD Magazine**. Or just go for hors d'oeuvres and try a back issue...

### The Bottom Line:

	Tape	Disk
1 year (12 issues)	\$50.00	\$95.00
6 months (6 issues)	\$30.00	\$55.00
Single Copies		
Back Issues	\$ 6.00	\$11.00
Good Games #1	\$12.00	\$23.00
Adventures #1	\$13.00	\$24.00

California residents add 6% to single copies.

North America — First Class postage included.

Overseas — add \$10 to subscriptions and \$1 to single copies. Sent AO rate.

### The Fine Print:

All issues from Oct 78 available on tape. Issues from Oct 82 available on disk, also.

Ask for list (24 Level I issues also available).

MasterCard/Visa

P.O. Box 1448  
Santa Barbara,

## THE ALTERNATE SOURCE

### Spellbound

Shoot-em-ups not your style? Consider Spellbound, a sophisticated word game that will both "please" and "astound": "please" because you will always have a capable partner at the flip of a switch and "astound" because you can demonstrate the superior capabilities of your TRS-80. Spellbound conducts a word search using its 12,000 word on-line dictionary in less than a minute. Words are extracted from a matrix of random letters by both you and your TRS-80. One to six humans can play: the word matrix is designed using a unique graphic configuration. The ideal demonstration program for your pedantic friends. Spellbound is written in a combination of Z80 and Fortran; original purchasers can also purchase the source code for an additional \$10. Sorry, this program only comes on disk. Both Model I and III versions are included for \$19.95. Because of critical real-time task processing, this program will not work with Newdos/80.

### TASORT The Alternate SORT

TASORT is a high speed sorting program, designed for easy use in BASIC programs that need powerful sort capabilities. TASORT is fast, sorts up to 65 arrays simultaneously, sorts any combinations of

variable types, is completely relocatable, respects high-memory, and will sort ascending, descending and tag-along. TASORT works with all Model I and III configurations, tape and disk, and is the perfect bridge for making your programs 100% compatible with all environments. TASORT is \$19.95, tape or disk. Write for information on licensing TASORT for your commercial applications.

### Modem 80

Need a top quality terminal program that works under a variety of environments? Modem 80 and its support packages have the TRS-80 talking with dozens of systems, both micros and mainframes. A special protocol permits easy and reliable communication with CP/M systems, too! Modem 80 allows you access to DOS commands while online, route screen displays to your printer, change all local communication parameters at any time, upload and download, send files larger than memory (if the other system recognizes XON and XOFF protocol), and even includes a HOST program so that you may access your unattended TRS-80 from a remote site. Four separate translation tables are included for communication output, video, printer and disk files. These are user modifiable. The Modem 80 package of seven programs and user's manual is \$39.95. This program is one of our best buys!

### Information Storage And Retrieval

ISAR I, Version 2.0, is the ideal beginning data base manager. ISAR allows you to create data files to your specifications and add, change and scan records as desired. Version 2.0 features include: Sorting of all ten fields at once; reports are generated by a

small BASIC program generated by your response to prompts (this allows your printer to work at the fastest possible speed and reports only need be defined ONCE); reports support titles, page numbers, column headings, footers, literals, end of file totals, special control characters LPRINTed before the report and more; documentation has been expanded to cover items such as error trapping, utilization of disk space, sample user sessions and information about how ISAR stores the information necessary to access a file (making conversions between ISAR and other data base managers easier). ISAR I, Version 2.0, complete with all enhancements and documentation, \$39.95. (Unregistered ISAR Expanded Users: Upgrades available!)

### The Alternate Source Programmer's Journal

A software toolbox for your TRS-80 Model I and III. Each issue of TAS features utilities and applications that enhance your investment in the revolution. And more. We tackle comparison reviews, Model I/III compatibility, useful patches for popular programs, modifying BASIC, using Z80 assembler and many other languages. The Alternate Source is \$24 for 12 issues. If you haven't seen our journal, request a sample copy with any product on this page.

Thanks for reading our ad! TAS is located at 704 North Pennsylvania, Lansing, MI 48906. Phones: (517) 482-8270 and (800) 248-0284 (order-line). Check, Money Order, Visa, MC, COD (\$1.75 extra), and written P.O.s welcome. We also stock several hundred programs from other vendors. Ask for a copy of the latest TAS flyer. Dealer inquiries welcome.
